
Summary:

- Results-driven Data/BI Analyst with 7+ years of experience in the financial and banking domain, delivering robust analytics and reporting solutions by leveraging SQL, Snowflake, and AWS.
- Expert in designing and optimizing ETL pipelines to support regulatory reporting, risk analytics, and fraud detection.
- Proficient in building data models and Tableau dashboards for high-impact business use cases such as credit risk analysis, transaction monitoring, and portfolio performance tracking.
- Adept at working with large-scale financial datasets and ensuring data integrity across cloud data platforms and BI tools.
- Experienced in Financial reporting, Financial Spreading, Basel II/III Implementation, Comprehensive and Capital Adequacy review (CCAR), Dodd Frank Act, Loan Pricing, Financial Statements Analysis, Financial Market risk management including Credit Risk/ Probability of Default Risk, Risk Weighted Assets and Value at Risk & Fixed Income Products, Bonds, Equity research, forecasting & Capital Market Risk; understand the risk data requirements.
- Experience in IFRS, GAAP, FRY-9C, FRY 14, FFIEC, RWA, Risk Analysis. Expertise in creation of dashboards using Business Intelligence and Cognos Reporting tool. Rich experience in data profiling, data cleansing, data integration, and data migration.
- Proficient in Tableau data visualization tool to analyze and obtain insights into large datasets, create visually compelling and actionable interactive reports and dashboards. Have working knowledge of Amazon Web Services (AWS) and Cloud Data Management.
- Strong understanding of project life cycle and SDLC methodologies including RUP, RAD, Waterfall and Agile
- Extensive Knowledge and Experience in ETL tools like SQL Loader and Datastage, Informatica to transfer the data between different databases. Working experience in design, development, utilization, and validation of both SQL and NoSQL databases.
- Good understanding of GAP analysis, Service Oriented Architecture (SOA), Client -Server applications, Data Analysis, Data Modelling, and Data Mapping. Adept at using Databricks for developing ETL and ELT processes using PySpark, Spark-SQL, and Scala.
- Extensively used SSIS transformations such as Lookup, Derived column, Data conversion, Aggregate, Conditional split, SQL task.
- Experience in provisioning access to Azure Data Lake from Databricks using Secret Scope, and mounting the storage account into Databricks. Attended User story grooming sessions and created user stories in JIRA in the backlog.
- Knowledge in the ETL (Extract, Transform and Load) of data into a data ware house/data mart and Business Intelligence (BI) tools like Business Objects Modules (Reporter, Supervisor, Designer, and Web Intelligence).
- Extensive use of MS Office tools with great expertise in MS Excel and others like MS Access, MS Word, and MS PowerPoint MS Project for data migration in to the CI System Knowledge Data Base in Microsoft SharePoint.
- Excellent Oral and written Communication, interpersonal, analytical skills and strong ability to perform in a team as well as individually.

Professional Experience:

Role: Sr. Data Analyst/BI Analyst

Client: Mizuho Americas – LA, CA (Remote)

June 2023 to Present

Project 1: The Scope of the project was to design risk solutions for banking clients to comply with Basel III rules. Risk Solution group is responsible for calculating, analyzing, reporting the regulatory filling of Risk-Weighted Assets (RWA) under the mandate of Regulatory Capital Rules. The goal of the platform was to build a RWA Calculation Engine for the traded product exposures (OTC Derivative Contracts, Repo-Style Transactions, Eligible margin loans, Guarantees, Credit derivatives, Cleared Transactions, Collateralized Transactions, and Unsettled Transactions) in compliance with BASEL III Accord Standardized and Advanced Approaches. The Calculation engine sources exposures from the upstream system using Banking Book Indicators to calculate Credit RWA using different methodologies like Current Exposure Method, Collateral Haircut Method, Simple VaR Method, Internal Models Method, Simple Approach.

Project 2: Regulatory Reporting (CCAR)

Performed financial risk stress testing and integration of model output for Comprehensive Capital Analysis and Review (CCAR). Used Agile Methodology extensively through all phases of the project. The goal of the project was to analysis data requirements and validate data sourced from different database; implementation and testing Axiom for automation purpose. The data was collected to file different regulatory reports including CCAR (FR Y-14 sets and FR Y-9C).

Responsibilities:

Project 1:

- Led the Basel III Data GAP Assessments (DGA), created spreadsheets, and analyzed possible scenarios within S&P's risk adjusted capital framework. Creating impact analyzer and gap assessment tools for regulations like Basel III.
- Utilized Power BI to create various analytical dashboards that helps business users to get quick insight of the data.
- Documented the Business Requirements Document (BRD) and System Requirement Documents with supporting Use Case Diagrams/ Data Flow Diagrams after liaising with business stakeholders. Developing reports and visualizations using Power BI for the agency.
- Captured user needs based on BASEL III for Federal reporting by conducting working sessions with cross – functional regional database teams. Developed Python scripts to do file validations in Databricks and automated the process using ADF.
- Analyzed user requirements and conducted JAD sessions with stakeholders to capture end – user UI and report generation granularity for RWA and EAD calculations. Used Snowflake functions to perform semi structures data parsing entirely with SQL statements.
- Assisting on implementing SCCL (Single Counterparty Credit Limit) regulation and various testing during development.
- Presented Change Requests in the CRB (Change Review Board) for the necessary approval from the Change Management Team.
- Developed complex SQL queries and stored procedures to retrieve and analyze data from various Oracle database sources.

- Developed pricing models for Non-Convertible Debentures, in collaboration with client (Mizuho Bank), increasing revenue for FTIL Risk Solutions department by 17%. Used AWS command line client and management console to interact with AWS resources and APIs.

Project 2:

- Collaborated with regulatory reporting team and Axiom configuration team to confirm manual data input templates which could be consumed by Axiom Controller View. Build and maintain CCAR (Comprehensive Capital Analysis & Review) operating rhythm and governance framework. Used SAS as an ETL tool to load data from flat files and databases into SQL Server and Teradata environments.
- Lead on the data sourcing effort for Retail Schedules pertaining to CCAR and the FRY 14Q reporting to FRB.
- Ensure data integrity and accuracy with other regulatory submissions (FRY 9C, FRY 14A, FRY 14M, GL system, etc).
- Prepared the CCAR reporting schedules (FRY 14A/Q) on certain periodic basis. Tested Axiom built reconciliation of FR Y-14A and FR Y-14Q reports to FR Y-9C report. Developed map and reduce code to generate Python dictionaries for NoSQL data structure adherence.
- Cross verifying quarterly data and sources of FRY 2590 with others like FR Y 9C, FR Y 11 and FFIEC009 reports and all other reports, along with supporting work papers, variance analysis.
- Worked with Stakeholders /Business partners, Product managers and technical teams following the SDLC process on a multiple projects.
- Managed project portfolio and responsible for various project management activities such as planning, sizing, configuration, project assignments, priority setting, project tracking/status, issue tracking/resolution, stakeholder communication, etc.
- Provided financial planning and analysis support to risk solution department including reporting, analyzing, modeling, and presenting financial annual & quarterly results. Utilized Delta caching for faster data processing using Databricks and PySpark.
- Gathered, analyzed, prepared and summarized recommendations for financial plans, securities analysis, acquisition activity, trended future requirements and operating forecasts. Risk Assessment, strategic impact, and short and long-term needs.
- Analyzed and reported out on Key Performance Indicator trends and opportunities using Tableau, as well as other monthly operating results vs. Targets and Best View using Hyperion Financial Management.
- Published variance explanation using Tableau and conducted monthly close calls with cross functional teams.

ROLE: Data Analyst

Client: Wells-Fargo & Co - Charlotte, NC (Remote)

July 2021 to Mar 2023

Wells Fargo & Company is an American international banking and financial services holding. The Risk Data Sourcing team is responsible for sourcing strategic risk data feeds from several diverse line-of-business systems, validating the feeds for accuracy and timeliness and warehousing the data for consumption by the Credit risk / Market risk / Liquidity risk/Country risk/Capital risk regulatory calculation and reporting engines. As a **Data Analyst**, I focused on analyzing data quality, profiling source feeds, and reconciling discrepancies using **SQL and Snowflake**. I worked closely with engineering and risk teams to support end-to-end data validation, ensure compliance with regulatory standards (Basel, CCAR), and deliver actionable insights through dashboards and reports.

Responsibilities:

- Analyzed claims data with SQL and developed ML classification models in Python (Scikit-learn) to predict high-risk patients, identifying cost trends that saved the client in operational costs.
- Built AI-enhanced Power BI dashboards integrating predictive patient metrics, used by stakeholders to optimize care plans.
- Studied the existing SDLC process at the client's side, and created Process improvements plan and Flow Diagrams.
- Developed keen understanding of various risk management categories such as credit, market risk, liquidity, country, and capital as well as OTC derivatives product. Developed Python scripts to do file validations in Databricks and automated the process using ADF.
- Created extracts, published data sources to tableau server, refreshed extract in Tableau server from Tableau Desktop.
- Interacted with business stakeholders from multiple departments within the Global Risk Management function: Enterprise Risk teams, Business & Regional Risk teams, Operational Risk & Compliance, and Global Risk & Compliance teams - led meetings and interviews.
- Work to develop CCAR end to end data mapping documents. Also worked on different aspects of CCAR requirements.
- Cleansing of source data in text files, and destination data to maintain data integrity and accuracy
- Conducted Joints Requirements Planning (JRP) and Joint Application Development (JAD) sessions involving Business stakeholders, user group representatives, Business analyst team, Development team representative, QA team representative, and UI development team. Performed feasibility study and risk analysis to identify the business critical areas from the user perspective.
- Developed Databricks ETL pipelines using notebooks, Spark Data frames, SPARK SQL, and python scripting.
- Reviewed the data model and reporting requirements for Cognos Reports with the Data warehouse/ETL and Reporting team.
- Conducted Sprint Planning Sessions, Sprint Review Sessions and Sprint Retrospective Meetings in order to identify pitfalls and overcome them in the next release cycle. Executed ETL mappings through data stage director and monitored status.
- Applied Unified Modeling Language (UML) methodologies to design Communication Diagram, Use Case Diagrams, Activity Diagrams, Sequence Diagram and ER diagrams using SAP Power Designer. Forecasting workforce requirements based upon the incident data.
- Facilitated data architects in understanding the business requirements to create an efficient Physical Data Model and also resolve the data integration and mapping [source to target] issues arising out of data transfer to and from distributed sources.
- Monitored and tracked stages of the application life cycle using JIRA.
- Created DTS Packages for migration of data between MS SQL Server database and other databases like MS Access, MS Excel and Flat Files. Worked with SSRS to generate the reports in SQL Server. Executed SQL and PL/SQL on DB2 database.
- Participated in test strategy and test case development and supporting user acceptance testing (UAT) activities.

Role: Data Analyst

Client: Citizens Financial Group, Inc - Providence, RI

Jan 2019 to June 2021

Project: The team was tasked with the development of data warehouses for forecasting purposes as well as reporting purposes and this position served as a liaison between the financial analysis team, the financial reporting team and the IT development team. The project covered compliance and regulations such as Basel III and CCAR. The process followed Agile Scrum Methodology.

Responsibilities:

- Responsible for applying regulations based on Basel III, which further can be implemented into DFAST and CCAR, which help to project Liquidity Impact. Worked on creating and validating FR-Y 14 a and Q reports with sql server reporting services.
- Mapped business functions underlying data and data models, performed data reconciliations and gap analysis at functional and data level for Basel III and CCAR reporting. Conduct data verification on projection data warehouse.
- Analyzed and design of CCAR (FR Y-14A schedules of Income statement and balance sheet), FR Y9C (few schedules), report requirements in AXIOM. Prepared the ETL mapping specifications to extract data from the existing source systems to the Data marts.
- Gather requirements through users interviews, teleconferences, document analyses, use case analyses and UML diagrams for user stories creation and obtain timely sign-off by all respective parties.
- Collected detailed credit risk information as part of its efforts to comply with Basel III rules and store it in the EIP Data Warehouse.
- Migrated data from different sources (text based files, Excel spreadsheets, and Access) to SQL Server databases using SQL Server Integration Services (SSIS). Utilized SSRS package to load files into the database.
- Designed and developed complex SQL scripts in SQL server database for creating tables for tableau reporting.
- Working with and combining complex data sets in Cognos, to prepare situational based reports to identify the problem areas for multiple service providers. Performing statistical analysis on the data including trend analysis and forecasting.
- Prepare FRDs that help drive the design of the infrastructure necessary for the organization to meet new CCAR reporting requirement
- Extensively involved in Data Governance process. Assisted in data grouping and defined relationship among the different tables.
- Designed, developed, and maintained reports and dashboards within the Governed Reporting System using tools such as SQL, Tableau, Power BI, or similar platforms. Use SharePoint to store, organize, share, and access information from almost any device.
- Work with the development team to define system specifications based on the business requirements gathered by Prototyping and JAD sessions. Design and implement basic SQL JOIN queries for QA testing and validate reports generated in Axiom.
- Performed System Integration testing, User Acceptance Testing and created test cases and test scripts.

Role: Business Data Analyst

Client: THE WORLD BANK GROUP - Washington, DC

Nov 2017 to Dec 2018

Project Description: Assigned as a Business Analyst for multiple projects beginning in the assessment phase. The projects included Credit Risk Rating, Trading Limits Setting, Post-Trade Compliance, and Collateral Management. Assigned to the projects in the initial assessment phase followed by business process re-engineering, vendor selection, technology selection, requirement collection, and implementation. As part of the Credit Risk and the limit setting project, the World Bank Group assigned ratings to all entities, counterparties, issuers, issues, and countries. The Credit Limits were based on the ratings and guidelines provided. The goal of the post-trade compliance project was to keep the trades under World Bank rules and compliance.

Responsibilities:

- Analyzed Feasibility and Risk to identify critical and high-risk areas of the application.
- Interacted with Risk Analyst team to add features such as Credit Risk, Previous Default History, Previous Credit History, Spending Patterns, Used Credits, and Available Credits to the risk assessment tool.
- Gained end-to-end understanding of the technology and data infrastructures behind the daily production and reporting of all counterparty credit risk (CCRT). Using Cognos to extract data from different sources and creating graphs for management reporting.
- Data mapping, logical data modeling, created class diagrams and ER diagrams and used SQL queries to filter data within the Oracle database. Conducted Data Analysis and created Data Mappings for back end systems using SQL on DB2.
- Deep understanding of various investment alternatives for portfolio such as equities, treasury and corporate bonds, debentures, derivatives (futures, forwards and options), commodities, private equity, real estate, hedge funds and venture capital.
- Extensively worked with SMEs in Formalizing and analyzing Trading Tools and Functions, including Market Order, Limit Order and Daily Trading Volumes. Executing repair reports to fix data issues as part of data cleansing activities.
- Reviewed and analyzed business requirements for International Fixed Income, Equities, Equity Derivatives and Prime Brokerage; developed business strategy and test plan;
- Participated in JAD sessions for requirement, feasibility and risk analysis with various stakeholders, including designers, developers, QA and management to identify critical and high risk areas of the application.
- Wrote specification per Basel II defined event type's category: Internal Fraud, External Fraud, Business Disruption & Systems Failures, Execution, Delivery, & Process Management etc.
- Comprehensive knowledge of and experience in multiple businesses including securities lending operations and trading, as well as prime brokerage sales. Involved in development of Test Plans, Test schedules, Test Cases based on high-level and detailed designs.
- Participated in the testing effort at all the stages of SDLC (Agile model) and executed test cases and documented the test results using HP Quality Center. Validating and manipulating data within Oracle using PL/SQL. Wrote PL/SQL queries to perform Data Analysis
- Designed and developed Use Cases, Activity Diagrams, Sequence Diagrams, OOAD using UML and Business Process Modeling.

Education: Bachelor of Computer Information Systems, Nobel College, Nepal 2017.
