SUMMARY

Business Analyst with over one year of experience in data-driven process optimization and BI reporting. Skilled in developing interactive Power BI and Tableau dashboards, conducting deep analytical research, and documenting operational workflows to boost efficiency and cut costs. Collaborative communicator with a track record of leading small analyst teams and delivering actionable insights in remote settings.

WORK EXPERIENCE

ImageFIRST

Jan 2025 - Jan 2025

Business Analyst

Clifton, NJ

- Leveraged analytical skills to evaluate and optimize logistical workflows, resulting in a 25% increase in overall efficiency and a 15% reduction in overtime expenses.
- Designed visualizations using Power BI and Tableau to improve transfer route performance by 15%, enhancing data interpretation for stakeholders.
- Developed a comprehensive documentation and step-by-step operational guidelines, reducing route transfer errors by 26% and cutting training time for new staff by 60%.

ImageFIRST.

Jun 2024 - Aug 2024

Data Analyst

Trumbull, CT

- Independently developed interactive Power BI visualizations to monitor quality-assurance metrics for Dartmouth College, a \$4 million client, enabling the team to identify and address defects more quickly.
- Created monthly Tableau dashboards with Python data pipelines to track sales, revenue, EBITDA, and workforce efficiency from 2023 onward, allowing leadership to spot trends and make data-driven decisions.
- Re-evaluated production floor operations, utilizing logical reasoning to decrease staff expenses by 40% and increase productivity by 50%.

Citizens for Citizens

Jan 2024 - May 2024

Data Analyst

Fall River, MA

- Managed a team of 5 data analysts to streamline the Citizens for Citizens database, improving efficiency by 25% through effective communication.
- Led technical setup and integration of Tableau and SQL into COPA, reducing new customer registration time by 40% and visualizing trends from over 50,000 data points.
- Served as the primary customer relation rep among two organizations, leveraging bilingual communication (English and Korean) to enhance productivity by 32%.

TECHNICAL SKILLS

- Programming Languages:** Python, SQL, Java, C+, R
- Databases:** MySQL, Azure SQL, MS SQL Server, Google BigQuery
- Visualization Tools:** Power B.I, Tableau, PowerApps, Salesforce, Dynamics 365. Microsoft Visio, Figma
- Tools:** Microsoft Office (PowerPoint, Access, Excel, Project), GitHub, Google Colab, Google Suite
- Machine Learning:** Logistic and Linear Regression
- Professional Skills:** Multilingual Capabilities, Analytical Skills, Data Interpretation, Logical Reasoning, Basic Arithmetic, Independence-, Commitment, Technical Setup

EDUCATION

University of Massachusetts Dartmouth

Sep 2024 - Dec 2025

Master of Data Science,

- Coursework:** High Performance Scientific Computation, Advanced Data Mining, Advanced Machine Learning, Database Design, Advanced Mathematical Statistics, Data Visualization, UI Interface

University of Massachusetts Dartmouth

Sep 2020 - May 2024

Undergraduate of M.I.S, Minor in Management

- Coursework:** Advanced Information Systems, Business Intelligence & Analytics, Data Communication & Computer Networks, Human Resource Management

PROJECTS

Financial Intelligence System | https://github.com/amrits26/Financial_Intelligence_system

Sep 2025 - Dec 2025

University of Massachusetts Dartmouth

- Architected a multi-agent backend using FastAPI and LangGraph to automate data ingestion, technical analysis (RSI, MACD), and statistical risk modeling.
- Google Gemini AI integrated to transform complex quantitative outputs into natural-language investment recommendations (BUY, SELL, or HOLD) with transparent reasoning.
- Implemented various coping mechanisms regarding stress, held self-help seminars for the competitive market.

Deep Fake Detection Engine | https://github.com/amrits26/Deep_Fakes_Detection_Engine

Sep 2024 - Dec 2024

- Analyzed around 200,000 images from a Kaggle dataset for deep-fake detection.
- Achieved 95%+ accuracy with no overfitting.
- Prioritized minimizing inference time and memory usage, allowing faster processing without decreasing accuracy.
