Los Angeles CA | 805-849-7006 | ramanareddykommireddy9676@gmail.com | [LinkedIn](#)

SUMMARY

Senior Data Analyst with 5+ years of experience in healthcare, financial services, and fraud analytics. Proficient in SQL, Python, Snowflake, and cloud data platforms Azure and AWS. Skilled in designing data models, automating ETL workflows, and creating interactive dashboards. Delivers actionable insights that support strategic decision-making and improve operational performance.

PROFESSIONAL EXPERIENCE

Amgen | *Data Analyst*

Oct 2024 - Present

- Leveraged data analytics techniques with SQL, Python, and Snowflake models to analyze claims, adjudication, and demographic trends, reducing claim denials by 25% and improving KPI accuracy and executive decisions by 30–40%.
- Built automated ingestion and refresh pipelines using ADF, SQL Server, ADLS Gen2, and API sources, reducing manual preparation by 40% and improving data reliability and refresh performance.
- Engineered analytics-ready datasets in Databricks using PySpark, Delta Lake, and validation logic, increasing data accuracy, audit readiness, and model consistency by ~30%.
- Published optimized reporting datasets in Azure Synapse with reusable SQL views and star-schema modeling, enabling a unified semantic layer for dashboards and ad-hoc analytics.
- Designed interactive Power BI dashboards using DAX, RLS, and semantic models to track clinical, financial, and operational KPIs, improving reporting efficiency by 25% and accelerating insights.
- Applied Python forecasting, regression, anomaly detection, and statistical testing to monitor sustainability, performance, and operational KPIs, improving early deviation detection and risk mitigation outcomes.
- Consolidated multi-source clinical and claims data using Databricks Lakehouse and Snowflake ELT workflows, supporting predictive analytics and reducing analysis cycle time for stakeholders.
- Collaborated with Medical Affairs, Clinical Operations, and business leaders to define KPI logic, validate metric accuracy, and deliver insights that improved alignment, trust, and decision quality.

Visa | *Data Analyst – Financial Analytics*

Jan 2021 - Aug 2022

- Analyzed North America transaction and payment volume trends using SQL, Excel, and advanced analytical skills to explain forecast variances, improving visibility and supporting faster finance and leadership decisions during close cycles.
- Built and enhanced forecasting and scenario-planning datasets in Snowflake using SQL models and CTE logic, improving forecast accuracy by 15–20% and strengthening FP&A reporting.
- Automated ingestion of financial and revenue data from Excel, APIs, Salesforce, and internal systems into Snowflake using AWS Glue, reducing manual preparation and reconciliation work by 35%.
- Designed modular ETL architecture using AWS Glue, Lambda, and S3 to support scalable CI/CD pipelines, reducing manual data preparation by 60% and improving overall pipeline reliability.
- Transformed and standardized revenue and driver datasets in Snowflake using reusable SQL logic and window functions, improving KPI consistency and trust for recurring financial reporting.
- Delivered executive dashboards in Power BI with DAX, Drillthrough, Bookmarks, and RLS to track revenue drivers, forecast vs actual performance, and asset-class KPIs in near real time.
- Built PySpark automation scripts to extract, cleanse, and validate large financial datasets, reducing manual QA effort by 60% and accelerating reporting turnaround across FP&A teams through consulting with stakeholders on best practices.
- Collaborated with compliance, finance, and analytics teams to standardize metric definitions, document business rules, and maintain data dictionaries in Confluence, improving transparency and alignment.

PayPal | *Business Intelligence Analyst - Fraud Detection Analyst*

Jan 2019 - Dec 2020

- Analyzed large volumes of transactional and behavioral data using SQL and Python in a tech industry environment to identify fraud patterns, supporting 35+ investigations and improving detection accuracy to 85% across multiple risk vectors.
- Monitored high-risk indicators such as rapid transactions, location anomalies, and high-value attempts through SQL rules and dashboards, accelerating fraud triage and response time for operations teams.
- Streamed JSON-based event and log data into Amazon S3 using AWS Lambda, improving freshness and availability of fraud datasets for near real-time investigation and reporting workflows.
- Engineered analytics-ready datasets in Databricks using PySpark and Delta Lake bronze–silver–gold layers, improving data reliability and supporting consistent fraud trend analysis and reporting.
- Built operational KPI dashboards in Power BI and Tableau to track detection trends, false positives, CLV erosion, and investigation turnaround, improving visibility and decision-making for risk teams.
- Developed cohort-based segmentation models and anomaly detection logic to identify churn spikes, behavioral anomalies, and fraudulent activity, enabling fraud and CX teams to take early corrective actions.
- Created Python regression models and statistical tests (t-tests, confidence intervals) to measure marketing impact on retention, improving budget allocation efficiency by 18%.
- Supported fraud investigations by extracting clean SQL datasets, validating suspicious transactions, reconciling rule outcomes, and consulting with risk, engineering, and support teams to document findings.

SKILLS

- **SQL & Databases Data Analysis & Data Science:** SQL (CTEs, window functions, optimization), Python (Pandas, NumPy, SciPy), forecasting models, regression modeling, anomaly detection, cohort analysis, segmentation, statistical testing (t-test, confidence intervals), Data Analytics, Statistics
- **Business Intelligence & Visualization:** Power BI (DAX, semantic models, RLS, Drillthrough, Dataflows), Tableau (LOD expressions, interactive dashboards), Qlik Sense (data modeling, scripting)
- **ETL / ELT & Data Engineering:** Azure Data Factory (pipelines, triggers), Azure Functions, AWS Glue, Lambda, S3 ingestion, Airflow orchestration, Databricks (PySpark, Delta Lake bronze–silver–gold), Unity Catalog governance, Snowflake (Tasks, Streams, Snowpipe, ELT modeling)
- **Cloud & Data Warehousing:** Azure: ADLS Gen2, Synapse Analytics, Databricks, AWS: S3, Glue, Lambda, Snowflake: warehousing, data marts, SQL transformations, Delta Lake / Lakehouse Architecture
- **Data Modeling & Governance:** Star-schema modeling, dimensional modeling, semantic layer design, Data validation, QA checks, HIPAA-compliant controls, RBAC, Data dictionaries, KPI definitions, documentation, lineage
- **Financial, Clinical & Fraud Analytics:** Forecast vs actual variance analysis, Transaction & volume trend analysis, Claims & adjudication analysis, Fraud indicators, risk scoring, pattern detection, Churn modeling, CLV erosion tracking, Campaign performance evaluation & retention modeling
- **Tools & Collaboration:** Excel (Power Query, Macros, Pivot Tables), JIRA, Confluence, Git/GitHub, Agile / SAFe, UAT validation, stakeholder requirement gathering
- **Industry & Consulting Expertise:** Consulting Experience, Tech Industry Experience

EDUCATION

TRINE UNIVERSITY | *Master of Science, Information Technology*

Aug 2022 - Aug 2024

PROJECTS

Retail Analytics – Power BI Advanced Dashboard Project | *Costco*

- Designed and deployed advanced Power BI dashboards on multi-year Costco retail datasets to deliver executive sales, customer segmentation, product and regional insights, enabling faster data-driven decisions
