

GUNJAN GURUNG

(469) 759-3444 | gunjan.grg27@gmail.com | <https://www.linkedin.com/in/gunjan-gurung77/>

PROFESSIONAL SUMMARY

- Full-Stack Software Engineer with 7+ years of experience designing, developing, and scaling enterprise applications across healthcare, insurance, and telecommunications domains.
- Strong expertise in Java, Spring Boot, microservices architecture, and RESTful APIs, with a proven track record of modernizing legacy systems into cloud-native, scalable solutions.
- Extensive hands-on experience with AWS (Lambda, S3, RDS, Glue, Redshift, Kinesis, API Gateway, Fargate), building high-availability, fault-tolerant platforms handling large-scale data.
- Proven ability to design and optimize data pipelines and ETL workflows using AWS Glue, Kinesis, Kafka, and Spark for real-time and batch processing.
- Experienced in end-to-end application development, from backend services to frontend integration using Angular and Node.js, ensuring seamless user experiences.
- Strong background in DevOps and CI/CD automation, leveraging Docker, Kubernetes, Jenkins, GitHub Actions, and AWS CodePipeline to accelerate deployments and reduce manual errors.
- Strong exposure to regulated environments, implementing secure, compliant, and auditable solutions aligned with industry standards (HIPAA, SOC2; transferable to AML/KYC/CFT).
- Adept at performance optimization, database tuning (PostgreSQL, Oracle, MySQL), and system monitoring using AWS CloudWatch and ELB.
- Experience applying AI/ML techniques using Python, TensorFlow, and scikit-learn to enable predictive analytics and intelligent data processing.
- Experience supporting enterprise clients through full software deployment lifecycles, including solution design, environment setup, production rollout, and post-go-live troubleshooting.
- Proven ability to collaborate with client stakeholders, DevOps teams, and platform engineers to deliver scalable, cloud-native solutions in production environments.

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer MEDITECH., Dallas, Texas

Apr 2024 – Present

- Designed and developed scalable, cloud-based ETL pipelines using AWS Glue, automating the extraction, transformation, and loading (ETL) of healthcare data into secure cloud environments, streamlining workflows for patient record management.
- Led cloud-native deployment and support of containerized microservices using Docker and Kubernetes, including environment configuration, scaling, and health monitoring.
- Developed RESTful APIs using Spring MVC to integrate Athenahealth's cloud applications with third-party healthcare software, facilitating secure, seamless data exchange.
- Implemented real-time data streaming solutions with AWS Kinesis, enabling the processing of patient data in real-time, enhancing decision-making capabilities for healthcare professionals.
- Worked with AWS S3 and RDS to store and manage vast amounts of healthcare data securely, optimizing data storage practices while ensuring high availability and fault tolerance.
- Used SSL/TLS-secured REST APIs to ensure encrypted data transmission between microservices & external systems.
- Collaborated with DevOps and platform teams to automate CI/CD workflows using AWS CodePipeline, reducing deployment time and minimizing manual release errors.
- Enhanced data security using AWS IAM, ensuring role-based access control for healthcare data & compliance with HIPAA.
- Developed machine learning models for predictive analytics in healthcare using Python and TensorFlow, improving patient care outcomes by leveraging historical data for decision support.
- Optimized PostgreSQL queries to improve clinical data retrieval performance and reduce latency.
- Designed responsive user interfaces using Angular, collaborating closely with front-end teams to seamlessly integrate RESTful back-end services, enabling real-time user interactions, improved UI/UX performance, and efficient data binding.
- Implemented cloud-native solutions using AWS Lambda, enhancing the scalability of Athenahealth's platform without the need for complex infrastructure management.
- Worked in Linux (RHEL/Ubuntu) environments for deployment, log analysis, shell scripting, & service monitoring.
- Applied AI/ML techniques using Python to analyze large-scale healthcare datasets, enabling predictive insights, automated data validation, and smarter downstream processing within AWS-based pipelines.

- Automated data ingestion workflows with AWS Glue for continuous, uninterrupted flow of healthcare data, supporting real-time analytics and reporting.

Java AWS Engineer
Guidewire Software, Inc., San Mateo, CA

Nov 2022 – Mar 2024

- Developed and maintained core insurance platform components using Java and Spring Boot, enabling efficient claims processing and policy management across Guidewire's customer base.
- Built microservices using Spring Boot, improving system reliability and scalability for insurance data management by reducing complexity and facilitating independent deployment of services.
- Integrated with external insurance data systems using REST APIs, allowing seamless integration of claims data and policy management across multiple channels.
- Worked with AWS services such as AWS Lambda and API Gateway to facilitate the integration of Guidewire's software with cloud-native applications, improving system performance.
- Optimized data pipelines with AWS Glue, processing large volumes of insurance data and integrating it with Guidewire's cloud-based platform for real-time analytics.
- Collaborated with DevOps engineers to implement CI/CD pipelines with Jenkins and AWS CodePipeline, automating the deployment process and reducing the time-to-production for new features.
- Leveraged AWS Redshift for large-scale data analytics, providing business intelligence teams with insights into customer behavior and operational performance.
- Worked closely with the QA team to design and execute unit and integration tests using JUnit and Mockito, improving the stability and reliability of Guidewire's applications.
- Utilized Node.js and React for developing front-end components, improving the user interface and providing seamless communication with backend services in the insurance ecosystem.
- Developed and optimized SQL queries for large insurance datasets in PostgreSQL, ensuring efficient data storage and quick retrieval of customer claims information.
- Implemented encryption and security protocols using AWS KMS, ensuring secure storage and transmission of sensitive insurance data, adhering to security and compliance standards.
- Improved system performance by identifying and addressing bottlenecks in data processing workflows, utilizing AWS CloudWatch to monitor resource utilization and adjust accordingly.
- Deployed cloud-native applications using AWS Fargate for containerized microservices, ensuring better scalability and reliability of insurance applications.

Java Developer
Verizon, Irving, TX

Feb 2018 – Oct 2022

- Developed backend services for Verizon's customer management platform using Java and Spring Framework, ensuring secure data processing for millions of customers.
- Implemented RESTful APIs using Spring Boot, enabling efficient communication between the backend system and the front-end application.
- Designed and developed microservices to handle customer billing, data usage, and account management, improving service reliability and reducing response times for customer requests.
- Implemented cloud-native services in Golang and deployed them using AWS Fargate and Lambda, enabling faster startup times, lower memory usage, and improved scalability compared to traditional JVM services.
- Integrated customer-facing applications with Node.js and Java, ensuring seamless communication between back-end services and front-end interfaces.
- Worked with AWS S3 for secure data storage, ensuring efficient management of customer records while improving access times and reducing storage costs.
- Enhanced system security by implementing OAuth 2.0, SSL/TLS and JWT for user authentication and authorization, ensuring safe access to Verizon's backend services.
- Collaborated with cross-functional teams to develop features that integrate ReactJS for dynamic, real-time user interactions in the Verizon mobile and web applications.
- Optimized database queries for PostgreSQL and Oracle to improve performance and reduce response times for customer account management processes.
- Implemented data privacy measures using AWS IAM to manage role-based access control for sensitive customer data, ensuring Verizon's compliance with industry standards.
- Worked on automating deployment processes using AWS CodePipeline and Jenkins, facilitating continuous integration and continuous delivery (CI/CD) for rapid feature releases.
- Monitored and optimized system performance using AWS CloudWatch and Elastic Load Balancing (ELB) to ensure application reliability and manage traffic spikes during high-demand periods.

- Created automated test cases using JUnit and Mockito, enhancing code reliability and reducing errors in the production environment.
- Developed customer notification systems using AWS SNS and AWS Lambda, automating alerts for service outages and account updates to millions of Verizon customers.
- Deployed containerized applications using Docker and AWS Fargate, improving deployment flexibility and ensuring consistent execution across different environments.
- Utilized ReactJS and Redux for handling front-end application state, providing an efficient and responsive user interface for Verizon's mobile applications.

TECHNICAL SKILLS

- **Programming Languages:** Java (Spring Boot, Spring MVC), Python, JavaScript (Node.js), GO, C++(academic experience)
- **Cloud Platforms:** AWS (Lambda, S3, RDS, Glue, Redshift, EC2), Azure (Azure Functions, Key Vault), GCP (BigQuery, Pub/Sub)
- **Web Services & APIs:** RESTful APIs, SOAP, JSON, XML, FHIR, HL7, AWS API Gateway, OAuth, JWT
- **Frameworks & Tools:** Spring Boot, Angular (5-14), Spring MVC, Hibernate, JPA, Node.js, Express, Apache Camel
- **Machine Learning & AI:** TensorFlow, scikit-learn, AWS SageMaker, Python-based ML libraries
- **DevOps & Automation:** Docker, Kubernetes, Jenkins, GitLab CI, GitHub Actions, AWS CodePipeline, Terraform
- **Databases & Data Storage:** MySQL, PostgreSQL, AWS RDS, Amazon S3, MongoDB, NoSQL, AWS Redshift, AWS Athena
- **Data Processing & Orchestration:** Apache Kafka, AWS Glue, AWS Data Pipeline, Apache Spark, AWS Kinesis
- **Security & Compliance:** AWS IAM, HIPAA Compliance, SOC2, Data Encryption, Data Governance
- **Version Control & Collaboration Tools:** Git, GitHub, GitLab, Jira, Confluence, Agile methodologies, Scrum

EDUCATION

Master of Science in Computer Science | East Texas A&M University | Commerce, Texas

Bachelor of Science in Biomedical Engineering | The University of Texas at Arlington | Arlington, Texas
