

Sabrina Jahan – Senior Data Analyst

Lilburn, GA | Email: sabjahan14@gmail.com | Phone: (678) 902-4408

WHAT I BRING:

Results-driven Data Analyst with 5+ years of experience delivering end-to-end data analytics, BI reporting, and cloud-based data engineering solutions across finance, supply chain, logistics, and enterprise operations.

Accomplished Data Analytics & Cloud Engineering Specialist with proven success designing, engineering, and delivering enterprise-scale data solutions that drive multimillion-dollar business impact. Expert in building high-performance ETL/ELT pipelines, real-time data streaming, and advanced analytics across AWS, Azure, and GCP ecosystems. Adept at translating complex business needs into scalable, cloud-native architectures, integrating data from diverse sources including SAP S/4HANA, ERP systems, APIs, and legacy platforms.

Recognized for delivering BI dashboards and predictive analytics using Power BI, Tableau, Python, and SQL that enable C-suite decision-making, optimize operational performance, and reduce reporting latency by up to 50%. Skilled in machine learning (ARIMA, LSTM, NLP, Random Forest) and advanced statistical modeling to forecast trends, detect anomalies, and automate decision pipelines. Proven leader in Agile/Scrum environments, cross-functional collaboration, and data governance frameworks, fostering a data-driven culture and elevating analytics maturity across global organizations.

SKILLSET:

Data & Analytics: Advanced SQL (PL/SQL, T-SQL), Snowflake, Big Query, Redshift, PostgreSQL, Oracle; ETL/ELT: dbt, SSIS, Azure Data Factory, AWS Glue; Data Modeling (star/snowflake schemas), ER/ERWIN, S2T mappings.

Programming & Analysis: Python (Pandas, NumPy, Matplotlib), R, SAS (Enterprise Guide, Macros); Excel (Power Pivot, Power Query, VBA).

Visualization & BI: Power BI (DAX, Power Query, RLS), Tableau (LOD expressions, extracts, role-based access).

Databases & Storage: Snowflake, Oracle, SQL Server, PostgreSQL, MySQL, DB2/UDB, Teradata, MongoDB, Big Query

Machine Learning & Forecasting: Time-series (ARIMA, LSTM), Random Forest, NLP basics (spaCy, NLTK), scikit-learn; model prototyping in Python.

Cloud & Platform: AWS (S3, Lambda, Redshift), Azure (ADF, Synapse), GCP (Big Query) experience building cloud data pipelines.

Data Governance & QA: Data profiling, cleansing, metadata management, MDM, SOX compliance. Tools & Collaboration: Git, Jupyter Notebook, Postman, Microsoft Visio.

CERTIFICATIONS:

Microsoft Certified: Power BI Data Analyst Associate

Data Science: Probability in R (Harvard)

Data Analysis Using Python – IBM

Power BI Data Analytics for All Levels 2.0

Google Analytics Individual Qualification (GAIQ) – Google

SQL - Advanced for Data Professionals

Advanced SQL: MySQL Data Analysis & Business Intelligence

EDUCATION QUALIFICATION:

Bachelor's Georgia State University – 2018 - Atlanta, GA, USA

CAREER ACHIEVEMENTS

- Built and deployed modern data pipelines using Python, SQL, Airflow, and Snowflake across AWS, Azure, and GCP, improving data processing efficiency by 50%.
- Migrated legacy systems to cloud-based architectures (Snowflake, BigQuery, Redshift), reducing infrastructure costs by 30% and enabling real-time analytics.
- Delivered 40+ BI dashboards (Power BI, Tableau) with advanced DAX, predictive modeling, and cloud data sources, supporting \$200M+ business decisions.
- Automated anomaly detection pipelines using Python and deployed on cloud-native stacks (AWS ECS, Lambda), reducing data quality issues by 40%.

PROFESSIONAL EXPERIENCE:

Relay Payments, Atlanta, GA | Data Analyst

March 2024 - Present

- Partnered with cross-functional Agile teams—PMs, BAs, Scrum Masters, DBAs, architects, and engineers—to capture business requirements, define user stories in Jira, document workflows, and deliver scalable, enterprise-grade analytics solutions.
- Performed advanced data exploration and KPI-driven analysis using SQL, Python, and SAS, providing financial reporting and operational insights for \$50M+ business units.
- Designed and launched interactive Power BI, Tableau, and SAS Enterprise Guide dashboards, applying DAX, LOD expressions, and advanced calculations with row-level security and automated refresh schedules to support leadership decision-making.
- Built unified analytics pipelines by integrating and transforming data from Oracle, SQL Server, Excel, flat files, SAP S/4HANA ERP, and APIs using SSIS, AWS Glue, Azure Data Factory, Apache Airflow, and Snowflake.
- Engineered optimized ETL pipelines and dimensional data models (Star/Snowflake) with ERWIN and SQL DDL scripting, leveraging AWS S3 for low-latency, high-performance data processing.
- Automated complex financial workflows and implemented predictive anomaly detection using Python, ARIMA, LSTM, and AI algorithms, reducing manual reconciliation efforts by 35% and improving budget accuracy.
- Partnered with data science teams to deliver NLP-based classification models for automated document tagging, enhancing operational efficiency.
- Maintained ETL, dashboard, and Airflow DAG version control using GitLab, integrating with CI/CD pipelines to ensure smooth deployment and change management.
- Executed comprehensive data profiling, cleansing, validation, and migration across OLTP, ODS, and cloud platforms (Big Query, CloudSQL), ensuring 99%+ data accuracy.
- Tuned SQL queries and refined schema design on Snowflake, Big Query, and CloudSQL to achieve significant performance gains for high-volume analytics workloads.
- Integrated SAP ERP and external APIs into analytics ecosystems using secure authentication mechanisms, enabling enterprise-wide KPI dashboards and AI-driven customer support systems on GCP.
- Delivered source-to-target mappings, automated financial reporting pipelines, and predictive analytics solutions to modernize legacy platforms in alignment with evolving business strategy.
- Developed and deployed time-series forecasting and ML models via Jupyter Notebooks and Airflow, supporting proactive financial planning and real-time KPI monitoring.
- Mentored junior analysts, enforced strict data governance and CMS compliance standards, and championed adoption of a data-first culture across distributed teams.

Kaiser Permanente, Atlanta, GA | Data Analyst

Feb 2021 - Feb 2024

- Delivered actionable business strategy recommendations by leveraging advanced analytics and process automation to optimize operational workflows.
- Designed and deployed interactive dashboards in Power BI, Tableau, and Excel, integrating automated reporting pipelines that boosted operational efficiency by 30%.
- Extracted, transformed, and cleansed data from Oracle, flat files, mainframes, and SAP transactional/master datasets using PL/SQL, SQL, SSIS, Azure Data Factory, and Python, ensuring enterprise-grade data accuracy and consistency.
- Developed high-performance stored procedures and optimized SQL queries; migrated and refactored legacy SAS scripts into Snowflake and Teradata for improved cross-platform analytics performance.
- Built advanced Power BI dashboards with calculated columns, DAX measures, Power Query transformations, dynamic filters, and role-based security, integrating scheduled refreshes through Power BI Service.
- Created ARIMA-based forecasting models in Python, embedding results into Power BI for predictive analytics on warehouse capacity, inventory trends, and supply chain optimization.
- Automated ETL workflows using Python, Airflow, AWS Glue, and containerized deployments on AWS ECS, reducing report generation time by 40% and enhancing data pipeline reliability.
- Designed and managed enterprise data models with Erwin, reverse-engineering schemas from databases and ODS systems, and published reusable models in Model Mart for enterprise adoption.
- Led migration of analytics workloads and dashboards to Azure, overseeing data validation, UAT testing, deployment, and post-production support.
- Integrated SAP S/4HANA datasets into analytics-ready formats, reconciling data between OLAP and OLTP systems to enable real-time reporting and operational KPI tracking.
- Developed KPIs, Tableau Data Extracts (TDEs), and ad-hoc visualizations supporting legal, billing, and strategic planning functions.
- Centralized structured and unstructured datasets into AWS S3 and Snowflake, implementing SQL-based quality checks and validation scripts to maintain data integrity.
- Built supply chain risk analytics solutions using Amazon Redshift, optimizing queries and integrating multiple data sources for improved decision support.
- Implemented Python-based anomaly detection to identify inventory discrepancies, reducing manual reconciliation by 30%, and

- developed scripts to improve incoming data quality.
- Partnered with DevOps and offshore teams to containerize, version-control, and deploy ETL workflows, managing system enhancements, UAT, and business validation across multi-environment pipelines.
- Collaborated with over 50 stakeholders and 15+ cross-functional teams to translate business objectives into AI-powered automation and advanced BI solutions, improving strategic decision-making accuracy by 25% and achieving 95% on-time project delivery.

Nationwide Insurance, Duluth, GA | Data Analyst

April 2020 - Jan 2021

Responsibilities:

- Delivered executive-ready Power BI dashboards and scorecards for KPIs, MOM, YOY, and QOQ trends, leveraging DAX, R scripts, and SQL to provide actionable insights on financial performance.
- Performed exploratory data analysis (EDA) and preprocessing on large financial datasets using Python (pandas, numpy, matplotlib); integrated R/Python scripts within Power BI for advanced trend and correlation analysis.
- Developed Python modules for calculating financial ratios, moving averages, and volatility metrics, enhancing decision-making in equity and bond portfolio management.
- Collaborated with data engineering teams to implement real-time streaming ingestion workflows using Python and Azure Stream Analytics, enabling up-to-the-minute financial reporting.
- Designed complex SQL queries, stored procedures, CTEs, views, and PL/SQL triggers to support advanced analytics and BI data models.
- Collected and documented business requirements from stakeholders, SMEs, and BAs, aligning BI deliverables with SDLC milestones for timely delivery.
- Deployed Postgres and MySQL databases for student data storage and processing; utilized Java and C# to automate website reporting workflows with robust code quality.
- Conducted data profiling, cleansing, and validation using Talend, Informatica, and SQL, ensuring high data quality, accuracy, and compliance with enterprise standards.
- Built robust data integration pipelines from OLTP systems using SSIS, Azure Data Factory, and Azure Stream Analytics, supporting both real-time and batch analytics use cases.
- Published and maintained Power BI reports with row-level security, automated refresh schedules, and role-based access controls for secure analytics distribution.
- Designed dynamic Power BI data models with calculated tables, computed columns, pivot/unpivot transformations, and integrated data from Azure Blob Storage.
- Authored technical design documentation, unit test cases, and user guides; participated in Agile stand-ups to ensure continuous sprint-based delivery.
- Conducted ETL performance optimization and real-time data streaming enhancements, improving reporting speed and reliability.
- Resolved data quality issues through profiling, cleansing, and reconciliation efforts, ensuring accurate, enterprise-wide reporting.
- Developed Tableau dashboards, managed user permissions on Tableau Server, and centralized dashboard access for improved governance.
- Built SharePoint-integrated approval workflows for internal banking systems, reducing manual intervention and increasing operational efficiency.
- Contributed to a scalable SaaS solution by deploying and optimizing 15+ services on GCP App Engine and Kubernetes Engine (GKE); partnered with project managers to deliver business cases, solution designs, and Agile-driven rollouts.
