

VARUN KUMAR

(Data Analyst)

| Mo.: +1 314-391-5810 | Email: kumar.varun.20018@gmail.com

Summary

- Data Analyst with 5+ years of experience delivering data analysis, business intelligence, and data governance solutions across Commercial Banking, Healthcare, and Technology domains.
- Proven expertise in identifying and managing Critical Data Elements (CDEs), data lineage, metadata documentation, and regulatory-aligned data quality initiatives.
- Strong hands-on experience with SQL, Snowflake, Python, and Advanced Excel, analyzing and transforming large datasets (100K–500K+ records) into trusted analytical assets.
- Specialized in data quality management, designing and implementing validation rules, reconciliations, and root-cause analysis to reduce data defects by 25–30%.
- Experienced in building KPI dashboards and self-service BI solutions using Tableau, Power BI, Looker, and Excel, improving stakeholder visibility and reducing ad-hoc requests by 35–40%.
- Effective liaison between Business, Operations, Data Governance, and Technology teams, translating business requirements into scalable data models and reporting solutions.
- Demonstrated ability to support credit risk, regulatory, operational, and performance reporting, ensuring accuracy, audit readiness, and enterprise data consistency.
- Detail-oriented, execution-focused professional with strong communication skills, experienced in managing multiple priorities, meeting SLAs, and enabling data-driven decision-making.

Experience

Client: Webster Bank, CT, USA | Remote

DEC 2024 – PRESENT

Role: Data Analyst

- Identified, defined, and documented 50+ Critical Data Elements (CDEs) across Commercial Banking domains (loan origination, servicing, deposits, treasury management), ensuring enterprise data consistency and regulatory compliance.
- Mapped end-to-end data lineage from source systems to downstream reporting layers for 30+ high-impact data elements, improving auditability and data accuracy for risk and regulatory reporting.
- Designed, implemented, and tested 40+ data quality rules (completeness, validity, accuracy, timeliness) using SQL and Snowflake, reducing recurring data defects by 25–30%.
- Built and maintained KPI dashboards and scorecards using Tableau, Power BI, and Advanced Excel, providing leadership with real-time visibility into data quality metrics, remediation progress, and risk indicators.
- Developed self-service BI reporting solutions, enabling Commercial Banking users to independently access trusted datasets and KPIs, reducing ad-hoc data requests by 35%.
- Created and managed “golden source” datasets by partnering with business SMEs and Data Technology teams, ensuring consistent definitions and reliable data consumption across analytics and reporting use cases.
- Served as the primary liaison between Commercial Banking teams and Enterprise Data Governance, coordinating metadata management, CDE prioritization, and quality rule implementation.
- Performed root-cause analysis of data quality issues, documenting findings and collaborating with Operations and Technology teams to implement fixes, improving issue resolution turnaround by 20%.
- Produced management-level reporting and executive summaries using Excel (advanced formulas, pivots), Power BI, and Tableau, supporting decision-making for credit risk and operational leadership.
- Maintained comprehensive metadata, lineage diagrams (Visio/Lucidchart), and KPI documentation, strengthening governance, audit readiness, and enterprise data transparency.

Client: Syneos Health, OH, USA | Remote

JAN 2023- NOV 2024

Role: Data Analyst

- Conducted in-depth data analysis and table joins across multiple clinical and operational datasets using SQL and Excel, delivering actionable insights to internal and external stakeholders.
- Developed, maintained, and enhanced 30+ recurring reports supporting business operations, compliance tracking, and client deliverables, consistently meeting 100% SLA timelines.
- Designed and optimized interactive dashboards using Power BI and Looker, visualizing KPIs such as performance trends, utilization metrics, and data quality indicators.
- Ensured data accuracy, completeness, and reliability by implementing validation checks, reconciliations, and adherence to reporting standards, reducing reporting errors by 25%.
- Processed and prioritized high-volume stakeholder data requests, efficiently pulling and preparing data from multiple sources using SQL, Power Query, and Excel (Advanced).
- Built advanced Excel solutions leveraging Pivot Tables, XLOOKUPS, Macros, and VBA, automating manual reporting tasks and saving 10+ hours per week.
- Collaborated with cross-functional teams including Operations, IT, and Business stakeholders to streamline reporting processes, cross-train users, and resolve data issues.
- Supported self-service BI initiatives by documenting data logic and report usage, enabling business users to independently access dashboards and insights.
- Identified opportunities for process improvements in data extraction and reporting workflows, implementing enhancements that improved report turnaround time by 20%.
- Maintained clear documentation and communicated insights effectively, demonstrating strong time management, attention to detail, and service-focused communication in a fast-paced environment.

Client: X-Logic Technologies | Hyderabad, INDIA

JAN 2021 - NOV 2022

Role: Senior Data Analyst

- Performed business and data analysis using SQL, Excel, and Python, applying statistical techniques to identify trends, anomalies, and actionable insights from structured datasets.
- Conducted data cleansing, validation, and sense-checking on large datasets (100K–500K records), improving data accuracy and consistency by 20%.
- Built and executed ad-hoc SQL queries and reports to support day-to-day business decisions, operational reviews, and stakeholder requests.
- Supported data modeling and transformation activities, preparing clean analytical datasets from internal databases and external data sources.
- Applied basic predictive and explanatory analysis techniques to support forecasting, performance analysis, and operational efficiency initiatives.

- Developed Excel-based analysis and reports using Pivot Tables, Lookups, formulas, and charts, reducing manual analysis time by 15%.
- Collaborated with business, market, and strategy teams to ensure data alignment with business definitions and reporting requirements.
- Assisted in the evaluation and implementation of reporting systems and data capture processes, contributing to system documentation and user guides.
- Provided reporting and data warehouse support for BI tools such as Power BI / OBIEE, ensuring report availability and timely issue resolution.
- Supported senior analysts and guided junior users by following data governance, reporting standards, and best practices across analytics workflows.

Education

Master’s in information technology & management | Webster University, USA| (Jan 2023-Oct 2024)

Skills & Abilities

Data Analysis & Querying	SQL (Complex Joins, CTEs, Window Functions), Snowflake SQL, Data Profiling, Root Cause Analysis, Ad-hoc Analysis
Databases & Data Platforms	Snowflake, Relational Databases, Cloud Data Warehouses, Structured & Semi-Structured Data
Data Governance & Quality	Critical Data Elements (CDEs), Data Lineage, Metadata Management, Data Quality Rules (Completeness, Accuracy, Validity, Timeliness), Reconciliation, Audit Readiness
Business Intelligence & Visualization	Tableau, Power BI, Looker, KPI Dashboards, Scorecards, Self-Service BI, Executive Reporting
Excel (Advanced)	Pivot Tables, Power Query, XLOOKUP, Advanced Formulas, Macros, VBA, Data Modeling
Programming & Scripting	Python (Data Analysis), SQL Scripting, VBA Automation
Reporting & Analytics	KPI Definition, Performance Metrics, Operational Reporting, Regulatory & Risk Reporting
Data Modeling & Documentation	Logical & Physical Data Models, Golden Source Design, Business Definitions, Metric Documentation
Tools & Productivity	Visio, Lucidchart, Power Query, JIRA, Confluence
Collaboration & Delivery	Stakeholder Management, Cross-Functional Collaboration, SLA-Driven Delivery, Agile Environment
