SUMMARY

Healthcare Data Analyst with **5+ years of experience** delivering actionable insights across enterprise healthcare environments, including **CVS Health** and **Abbott**. Skilled in leveraging **SQL, Python, Snowflake, Tableau**, and **Power BI** to analyze clinical and operational data, support **population health management**, and enhance **Medicare/Medicaid performance reporting**. Experienced in **ETL development, predictive modeling**, and **HIPAA-compliant data governance** using tools like **Collibra**. Trained **Medical Coder (CPT Level)** with hands-on experience applying **ICD-10** and **CPT coding standards** to improve data structure, compliance, and reporting accuracy. Proven ability to collaborate cross-functionally with clinical, pharmacy, and IT teams to deliver scalable analytics solutions that drive improved **chronic disease management, medication adherence**, and **patient outcomes**. Proficient in deploying **GenAI-powered patient engagement systems** using **AWS SageMaker** and **LangChain**.

TECHNICAL SKILLS

Data Analytics & Programming: SQL, Python (Pandas, NumPy, Seaborn, scikit-learn), R, dbt, Excel (Advanced), Jupyter Notebooks

Business Intelligence & Visualization: Tableau, Power BI, SQL Server Integration Services (SSIS), Matplotlib

Cloud & Data Engineering: AWS (Glue, S3), Snowflake, AWS SageMaker, LangChain, Data Warehousing, ETL Pipelines, Feature Store Design

Healthcare Domain Knowledge: HIPAA Compliance, ICD-10 & CPT Coding, Medicare & Medicaid Data Reporting, Patient Engagement Analytics, Predictive Maintenance, HL7 ADT, FHIR interoperability, HEDIS, NCQA, CMS

Machine Learning & Experimentation: Logistic Regression, A/B Testing, Exploratory Data Analysis (EDA), Model Operationalization

Project Management & Collaboration: Agile Methodologies, Stakeholder Engagement, Data Governance (Collibra), Team Mentorship

PROFESSIONAL EXPERIENCE

CVS Health | *Healthcare Analyst*

RI | January 2025 – Present

- Utilized **SQL, Python (Pandas)**, and **Snowflake** to analyze high-volume pharmacy claims, and patient engagement data, identifying care gaps and medication adherence trends, contributing to a **20% increase in prescription fulfillment** for chronic disease management.
- Developed and automated **ETL pipelines** using **dbt** and **AWS Glue**, cutting manual data validation by **50%** and accelerating delivery timelines for **CMS performance** reporting.
- Created **interactive Tableau dashboards** powered by **SQL Server Integration Services (SSIS)** data pipelines, enabling real-time tracking of **population health KPIs** across **1k+ retail locations**, such as medication adherence and preventive care screening rates.
- Established **HIPAA-compliant data governance protocols** across analytical workflows using **Collibra**, ensuring secure handling of **Protected Health Information (PHI)** and alignment with regulatory standards.
- Integrated a **GenAI-powered patient outreach system** using **AWS SageMaker** and **LangChain** to personalize medication adherence messaging, which improved patient response rates by **25%** and reduced manual intervention by the clinical operations team by **40%**.
- Partnered cross-functionally with **clinical operations, pharmacy**, and **IT stakeholders** to define and implement scalable data solutions and dashboards aligned with **medication adherence** and **patient care** initiatives.
- Enhanced interoperability readiness by mapping datasets to **USCDI elements, ICD-10/CPT**, and **FHIR resources** while supporting **HL7 ADT** message interpretation for **transitions-of-care workflows**.

Abbott | *Data Analyst*

India | March 2019 – July 2023

- Integrated and harmonized complex, multi-source **operational datasets** from **EMEA service operations** using **SQL, Python**, and **Excel**, uncovering **\$450K+ in annual efficiency opportunities** to support strategic initiatives and planning.
- Designed and executed **A/B tests** on service dispatch workflows; built **logistic regression models** in Python to analyze experiment results, achieving an **18% reduction in average issue resolution time**.
- Performed **exploratory data analysis (EDA)** using **Python (Pandas, Seaborn)** and **SQL** to identify drivers of equipment failure, leading to a **predictive maintenance strategy** that reduced reactive service calls by **30%**.
- Applied **ICD-10** and **CPT coding standards** to structure service data, improving **reporting accuracy** and ensuring **compliance** with regulatory standards in trend analyses.
- Developed and deployed a **Power BI dashboard** to monitor **real-time service performance metrics** across the EMEA region, improving operational visibility and reducing reporting latency by **80%**.

EDUCATION

Master's in Health Data Science | Saint Louis University, MO, USA.

Bachelor's in Pharmacy | SNVPMV, Hyderabad, India.
