SUMMARY

- Over 4 years of hands-on experience in deriving insights from complex data using Python, SQL, and R, with strong expertise in libraries like Pandas, NumPy, and Scikit-learn for effective data wrangling, exploration, and analysis.
- Designed and implemented robust ETL workflows to efficiently extract, transform, and load data from multiple sources, ensuring consistency, accuracy, and readiness for advanced analytical use.
- Developed interactive dashboards and reports in Tableau, Power BI, and Excel to translate analytical findings into clear visual insights, enabling business teams to make informed and timely decisions.
- Applied advanced statistical techniques, forecasting models, and predictive analytics to identify trends, optimize business strategies, and support evidence-based decision-making across teams.
- Worked extensively with relational and NoSQL databases such as MySQL, Microsoft SQL Server, and MongoDB, optimizing queries, preparing datasets for analysis, and driving reliable data integration for reporting and KPIs.

SKILLS

Methodologies:	SDLC, Agile, Waterfall
Programming Language:	Python, SQL, R
Packages:	NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, TensorFlow, Seaborn
Visualization Tools:	Tableau, Power BI, Advanced Excel (Pivot Tables, VLOOKUP)
IDEs:	Visual Studio Code, PyCharm, Jupyter Notebook, IntelliJ
Database:	MySQL, PostgreSQL, Microsoft SQL Server
Cloud Technologies:	AWS (EC2, RDS, S3), Microsoft Azure
Other Technical Skills:	Google Analytics, DAX, Power Query, ETL Tools, Alteryx, SAS, JIRA, SAP, SSIS, SSRS, Microsoft Visio, Machine Learning Algorithms, Probability distributions, Confidence Intervals, ANOVA, Hypothesis Testing, Regression Analysis, Linear Algebra, Advance Analytics, Data Mining, Data Visualization, Data warehousing, Data transformation, Data Storytelling, Association rules, Clustering, Classification, Regression, A/B Testing, Apache Spark, Apache Kafka, Apache Beam, ETL/ELT Forecasting & Modelling, Data Cleaning, Data Wrangling, Critical Thinking.
Version Control Tools:	Git, GitHub

EXPERIENCE

- Data Analyst | Optum, USA
- Jan 2024 - Present
- Utilized Apache Airflow to schedule and orchestrate end-to-end ETL workflows for cancer patient datasets, ensuring reliable, automated data processing and timely availability of clean data for model training and prediction.
 - Designed and implemented Python scripts to preprocess, clean, and transform complex medical datasets, automating data preparation tasks and significantly enhancing data quality and readiness for predictive analytics.
 - Enhanced querying efficiency of large-scale clinical and patient data stored in Azure SQL Database by creating optimized stored procedures, views, and indexes, improving data retrieval speed and accuracy for analytics use cases.
 - Improved processing of massive patient records and genomic datasets through effective data partitioning and indexing strategies in Azure SQL, increasing performance and scalability of machine learning pipelines.
 - Applied machine learning algorithms including regression, and clustering techniques using Python and related libraries to predict cancer risk, uncover critical risk factors, and support early disease detection and intervention efforts.
 - Conducted rigorous A/B testing and validation of predictive models to evaluate accuracy and robustness, resulting in improved reliability of cancer risk predictions and reduction in false positives and negatives.
 - Developed and maintained dynamic, interactive Power BI dashboards visualizing cancer risk scores, patient demographics, and model performance metrics, facilitating timely and informed decisions by healthcare professionals.
 - Delivered ad-hoc reporting on cancer risk trends, patient segmentation, and predictive outcomes to management, enabling data-driven clinical decision support and healthcare planning.
 - Collaborated closely with cross-functional teams of data scientists, clinicians, and IT specialists in Agile analytics projects, iterating on predictive models and refining cancer detection workflows to enhance diagnostic accuracy.

- Utilized JIRA for efficient task management and progress tracking, ensuring on-time delivery of actionable insights that contributed to optimized cancer prediction and intervention strategies.

Data Analyst | Infosys, India

Apr 2019 – Oct 2022

- Analyzed financial transaction and performance datasets using Python, SQL, and Excel to generate actionable insights that enhanced revenue forecasting accuracy and supported strategic financial planning.
- Executed end-to-end data analysis lifecycle including requirements gathering, data modeling, validation, and reporting utilizing Python, Tableau, and Excel, ensuring delivery of precise and actionable financial forecasts.
- Automated data extraction, transformation, and forecasting workflows with Python scripting, reducing manual errors and accelerating financial reporting turnaround time.
- Applied advanced statistical models and machine learning techniques such as ARIMA, Prophet, and scikit-learn for time-series forecasting and anomaly detection, improving forecast accuracy by 30%.
- Developed and maintained real-time, interactive financial dashboards in Tableau to visualize revenue trends, budget variances, and forecasting performance for decision-makers.
- Deployed and scaled forecasting models and data pipelines using AWS EC2, managed relational databases with AWS RDS, and stored large datasets in AWS S3 for scalable cloud analytics.
- Conducted exploratory data analysis (EDA) with Python libraries including Pandas, Matplotlib, and Seaborn to identify key financial patterns, risks, and opportunities.
- Optimized MySQL databases through efficient indexing and query optimization, reducing data retrieval time and improving processing speed for financial reports.
- Improved ETL processes by leveraging Python and SQL to integrate multi-source financial data into data warehouses, reducing processing time by 40%.
- Integrated Apache Kafka for real-time streaming of transaction data to enable faster detection of financial anomalies and dynamic performance monitoring.
- Automated financial data aggregation and reporting using Excel VBA, PivotTables, and VLOOKUP, reducing report generation time by 35% and increasing data reporting efficiency.

PROJECT

Finance Process Automation using Python

- Automated recurring finance tasks such as monthly financial close, report generation, and data consolidation for mock accounting departments.
- Streamlined Excel-based financial statements into dynamic Python scripts.
- Scheduled ETL jobs to automate ledger consolidations and reporting

Forecasting & Dashboarding System

- Built a financial forecasting model integrated with Power BI dashboards to simulate revenue and expense trends.
- Integrated SQL to automate data pulls from a simulated transactional database.

Handwriting recognition using deep learning

- Team lead of group project, Designed and fabricated a training module by using the input given because hand writings differ from one another.

EDUCATION

University Of Cumberlands : Master of Science in Information Technology.

Amrita Vishwa Vidyapeetam :Bachelor of technology in Computer Science and Engineering.
