

Summary

- About 7+ years of data analyst experience possess a strong background in quantitative analysis, data visualization, and database management. With excellent communication skills and a keen attention to detail, I am committed to delivering high-quality results that exceed expectations.
- Worked on multiple Lines of Business (LOB's) in the areas of Data Analysis, Business requirement gathering, Liaison between the cross-functional teams, top management clients, users and any stakeholder involved in the project.
- Strong experience in Data Analysis, Business Analysis Data Profiling, Data Migration, Data Quality, Data Integration, Data Mapping, Data Modeling, and Metadata Management Services in all phases of Software Development Life Cycle (SDLC) like Requirement Analysis, Implementation, and Maintenance and good experience with AGILE Methodologies and Jira
- Skilled in analyzing business processes, eliciting requirements, defining business needs and translating it to Business Requirement Document (BRD), Functional Requirement Document (FRD), Software Requirement Specification (SRS)/ Technical Requirement Documents (TRD), User Stories, Use-case Specification and Non-functional Requirements.
- Strong understanding of project life cycle and SDLC methodologies including RUP, RAD, Waterfall and Agile.
- Worked on the implementation of Metadata Repository, Maintaining Data Quality, Data Clean-up procedures, Transformations, Data Standards, Data governance program, Scripts, Stored Procedures, triggers and execution of test plans.
- Used data analysis techniques to validate business rules and identify low-quality missing data in the existing Enterprise Data Warehouse.
- Proficient in data analysis using SQL, Tableau, and other data analysis techniques.
- Capable of designing data warehouses and data marts using dimensional modeling techniques, such as star and snowflake schemas.
- Skilled in exploring and querying data using Azure Synapse SQL, Apache Spark, and other data exploration tools.
- Imported data from mainframe flat files and relational database Oracle files into SAS files per detailed specifications.
- Extracted Data from DB2, COBOL Files and converted to Analytic SAS Datasets
- Involved in development and enhancement of SAS programs for user acceptance and generating report, tables and listing.
- Proficient in using Azure Data Factory for data integration, ETL (Extract, Transform, Load), and data orchestration.
- Proficient in Python, with a strong grasp of the language's syntax, data structures, and libraries.
- Experienced in extracting data from various sources, such as databases, APIs, and files, using ETL processes, data integration tools, and scripting languages like SQL.
- Used SQL to extract data from Oracle ERP databases to analyze the data.
- Strong experience in using Excel and MS Access to dump the data and analyze based on business needs.
- Serve as an expert in Business Metadata in Collibra and promote understanding of the data definition at the application, data element and data domain level.
- Involved in defining the source to target data mappings, business rules and data definitions.

Education:

Bachelor's in computer science from Sikkim Manipal University, India

Skill Matrix:

Project Management:	MS Project, MS Excel, Confidential Rational Portfolio Manager
Database Management:	Oracle SQL, MySQL, MS SQL Server, MS Access, Data Lineage Hadoop (Hive, PIG), Teradata
Data Visualization:	Tableau, Power BI, Excel, Macros
Cloud Platform	AWS, Google Cloud, Azure, Snowflake
Version Control and Documentation:	MS Office Word, MS Project, Advanced Excel, Lotus Notes, GitHub repository
ETL	Alteryx, Informatica IDQ, Informatica Power center, SSIS

Collaboration Tools:	JIRA, Confluence
Testing and Quality Assurance:	User Acceptance Testing (UAT), Test Case Design, Test Planning

Professional Work Experience

Bank Of America, Dallas TX
Sr. Data Analyst/Business Data Analyst

Nov 2024 – Present

Responsibilities:

- Worked with Data Analysis Primarily Identifying Data Sets, Source Data, Source Metadata, Data Definitions Data Formats, Data Validation, Data Cleansing, Data Verification, and Identifying Data Mismatch.
- Conducted comprehensive data audits to identify and rectify data quality issues, ensuring accuracy and consistency across datasets.
- Created various data quality mappings in Informatica Data Quality (IDQ) tool and imported them into Informatica PowerCenter as mappings, Mapplets.
- Utilized advanced Excel functions such as VLOOKUP, HLOOKUP, INDEX, MATCH, and array formulas to perform data analysis and streamline workflows.
- Worked with Finance, Risk, and Investment Accounting teams to create Data Governance glossary, Data Governance framework, and Process flow diagrams.
- Integrated data remediation processes with existing ETL workflows, ensuring continuous improvement of data quality throughout data pipelines.
- Developed robust ETL processes using SSIS, cleansing and enriching data to ensure accuracy and consistency for analytical insights.
- Demonstrated expertise in writing and debugging complex SQL queries, performing data analysis, and ensuring data quality across multiple Big Data platforms.
- Worked and extracted data from various database sources like Oracle, SQL Server, DB2, and Tera data/Big Data.
- Developed and maintained data quality metrics and dashboards to track and report on data quality issues.
- Utilized SSIS to design and implement data integration workflows, seamlessly moving and transforming data from diverse sources for analysis.
- Tested Complex ETL Mappings and Sessions based on business user requirements and business rules to load data from source flat files and RDBMS tables to target tables.
- Worked on maintaining data governance frameworks, policies, and procedures to ensure data quality, integrity, and security across the organization.
- Conducted Data blending, Data preparation using Alteryx and SQL for Tableau consumption and publishing data sources to Tableau server.

Wells Fargo, Dallas TX
Sr. Data Analyst/Business Data Analyst

Nov 2023 – Oct 2024

Responsibilities:

- Worked on projects involving Data Analysis, Data Management, SQL, problem-solving, and multi-tasking between multiple projects supporting multiple business functions in WellsFargo.
- Wrote complex SQL queries on daily basis to retrieve data and worked on Teradata, Oracle, MS Access, SQL Server etc.
- Involved in documenting the Data quality scores in Collibra using integrations with Informatica Data Quality.
- Performed data analysis and data profiling on a day-to-day basis using complex SQL on various source systems including Oracle and Teradata.
- Processed and analyzed large datasets using the Hadoop ecosystem, including HDFS, MapReduce, and Hive.
- Worked with Data Analysis Primarily Identifying Data Sets, Source Data, Source Metadata, Data Definitions Data Formats, Data Validation, Data Cleansing, Data Verification, and Identifying Data Mismatch.
- Implemented scalable ETL pipelines using Apache Spark in Databricks to process large datasets.
- Used Python libraries like Pandas and NumPy to clean, transform, and preprocess large datasets for analysis.

- Streamlined data cleaning and transformation processes using Power Query to create automated and reusable workflows for large datasets.
- Worked closely with business units, IT teams, and data stewards to prioritize remediation efforts and ensure that business-critical data was accurate and trustworthy.
- Developed advanced Power Pivot data models by integrating multiple data sources, creating relationships, and defining complex DAX measures for insightful reporting.
- Conducted comprehensive data audits to identify and rectify data quality issues, ensuring accuracy and consistency across datasets.
- Created complex formulas and functions, including VLOOKUP, HLOOKUP, INDEX-MATCH, IF statements, nested functions, and array formulas in Microsoft Excel.
- Developed Python scripts to automate repetitive data tasks, reducing manual effort and increasing efficiency across projects.
- Worked on building complex data workflows and automation processes in Alteryx Designer using a drag-and-drop interface, allowing for seamless integration of data processing tasks and streamlining of data workflows.
- Used Alteryx's data cleansing tools and quality assurance features to identify and address data quality issues such as missing values, duplicates, and outliers, ensuring the integrity and accuracy of analysis results.
- Worked on integrating Alteryx with other data analytics tools and platforms such as Tableau, Power BI, and SQL Server, enabling seamless data exchange and collaboration across the analytics ecosystem.
- Produced data domain governance dashboards to communicate subdomain health to business, DMI, risk and compliance stakeholders.

Comerica Bank,Dallas,TX
Sr. Data Analyst/Business Data Analyst

Jan 2023 - Oct 2023

Responsibilities:

- Worked on Gathering requirements and develop various SQL jobs, scripts which involved extensive data analysis and understanding of data warehouse and ETL processes.
- Worked on complex projects enterprise-wide to ensure that data quality is maintained so that data can effectively support business processes.
- Worked on analysis and reporting in support of regulatory requirements for multiple LOB's.
- Performed data analysis and data profiling on a day-to-day basis using complex SQL on various source systems including Oracle and Teradata.
- Worked on building complex data workflows and automation processes in Alteryx Designer using a drag-and-drop interface, allowing for seamless integration of data processing tasks and streamlining of data workflows.
- Used Alteryx's data cleansing tools and quality assurance features to identify and address data quality issues such as missing values, duplicates, and outliers, ensuring the integrity and accuracy of analysis results.
- Worked on integrating Alteryx with other data analytics tools and platforms such as Tableau, Power BI, and SQL Server, enabling seamless data exchange and collaboration across the analytics ecosystem
- Conducted Data blending, Data preparation using Alteryx and SQL for Tableau consumption and publishing data sources to Tableau server.
- Worked on complex Excel formulas and functions, such as VLOOKUP, INDEX-MATCH, SUMIFS, COUNTIFS, AVERAGE, IF, and CONCATENATE, to perform calculations, analyze data, and automate repetitive tasks.
- Utilized statistical software such as R, SAS, and Python with libraries like statsmodels and SciPy to perform data analysis and modeling.
- Coded efficient SAS and SQL scripts to extract and aggregate data from multiple databases, ensuring consistency and accuracy across diverse data sources.
- Implemented validation processes using SAS macros and advanced SQL queries to identify inconsistencies and ensure data quality before analysis.
- Optimized SAS workflows and SQL queries to improve data retrieval and processing efficiency for large-scale datasets
- Used SAS and SQL to generate reports, dashboards, and exploratory analyses, providing actionable insights for stakeholders.

Responsibilities:

- Worked on Gathering requirements and develop various SQL jobs, scripts which involved extensive data analysis and understanding of data warehouse and ETL processes.
- Worked with Finance, Risk, and Investment Accounting teams to create Data Governance glossary, Data Governance framework and Process flow diagrams.
- Created Data Governance Policies, Business Glossary, Data Dictionary, Reference Data, Metadata, Data Lineage, and Data Quality Rules.
- Developed and maintained data quality metrics and dashboards to track and report on data quality issues.
- Monitored and managed data quality by performing regular data audits and cleansing activities.
- Proficient in establishing and maintaining data governance frameworks, policies, and procedures to ensure data quality, integrity, and security across the organization
- Worked on Data Management using Collibra for Enterprise Data Governance projects on areas of Data Quality, Reference data management, Data Dictionary, Business Glossary, Data Discovery, Metadata management.
- Involved in documenting the Data quality scores in Collibra using integrations with Informatica Data Quality.
- Used Informatica Data Explorer (IDE) & Informatica Data Quality (IDQ) profiling capabilities to profile various sources, generate score cards, create and validate rules and provided data for business analysts for creating the rules.
- Created various data quality mappings in Informatica Data Quality (IDQ) tool and imported them into Informatica PowerCenter as mappings, Mapplets.
- Conducted comprehensive data audits to identify and rectify data quality issues, ensuring accuracy and consistency across datasets.
- Implemented data cleansing processes to remove duplicates, correct errors, and standardize data formats, improving data integrity and reliability.
- Collaborated with data governance teams to establish data quality standards and remediation protocols, promoting best practices within the organization.
- Collaborated with business stakeholders, data owners, and IT teams to define data requirements and ensure data accuracy
- Worked and extracted data from various database sources like Oracle, SQL Server, DB2, and Tera data/Big Data.

Tenet Healthcare,Dallas-TX
Data Analyst / Business Data Analyst

Oct 2017 – Jun 2021

Responsibilities:

- Performed data analysis and data profiling on a day-to-day basis using complex SQL on various source systems including Oracle and Teradata.
- Created data dictionary, Data mapping for ETL and application support, DFD, ERD, mapping documents, metadata, DDL and DML as required.
- Documenting the Data quality scores in Collibra using integrations with Informatica Data Quality.
- Collaborated with cross-functional teams to understand data requirements, streamline data acquisition processes, and deliver actionable insights.
- Developed and maintained robust data dictionaries and metadata repositories, facilitating easy access and understanding of enterprise data assets.
- Performed data cataloging and metadata management to facilitate data discovery and enhance data usability within the data lake.
- Configured Jira workflows to streamline data analysis processes, enabling efficient task assignment, tracking, and resolution.
- Integrated data lake with downstream analytics and BI tools, enabling seamless data flow and real-time analytics.
