SUMMARY

Analytical and detail-oriented Data Analyst with 2+ years of experience transforming complex healthcare data into strategic insights that enhance clinical outcomes and operational efficiency. Proficient in Python, SQL, and modern BI tools, with hands-on expertise in integrating EHR, HL7, and FHIR data for population health and compliance reporting. Skilled in predictive modeling, ETL automation, and cloud data engineering across AWS, Azure, and Snowflake. Strong record of accomplishment in improving data governance, ensuring regulatory compliance, and delivering actionable dashboards for payer and provider organizations.

TECHNICAL SKILLS

Programming & Scripting: Python (Pandas, NumPy, SciPy, Matplotlib, Seaborn, Scikit-learn), R (tidyverse, ggplot2, dplyr), SQL (MySQL, PostgreSQL, T-SQL), SAS (PROC SQL, Enterprise Guide), VBA Automation for Excel reporting.

Healthcare Data & Standards: EHR/EMR Systems (Epic, Cerner), HL7, FHIR APIs, ICD-10/9, CPT, LOINC, SNOMED CT, Claims & Clinical Trial Data, HEDIS, CMS Reporting, and Population Health Analytics.

Data Management & Warehousing: SQL Server, Oracle, Snowflake, BigQuery, Redshift, Azure Synapse; skilled in Data Modeling (Star/Snowflake Schema), ETL design, Query Optimization, and enterprise Data Governance practices.

Visualization & BI Tools: Power BI (DAX, Power Query), Tableau (LOD, Storyboards), Qlik Sense, Excel Dashboards (Pivot, Power Query, Macros), Looker Studio, and SAP BusinessObjects for interactive analytics.

Statistical & Predictive Analytics: Regression & Correlation Analysis, Forecasting, A/B Testing, Cohort & Survival Analysis, KPI & Trend Evaluation, Risk & Outcome Modeling, and Data-Driven Insights Generation.

Cloud, ETL & Data Engineering: Apache Airflow, Informatica, SSIS, AWS Glue, Azure Data Factory, PySpark, Databricks, AWS (S3, RDS, Redshift, QuickSight), Azure (Synapse, Data Factory), and GCP (BigQuery).

Compliance & Collaboration: HIPAA, GDPR, PHI/PII Protection, Data Encryption, Audit Trails, Metadata Management, Jira, Confluence, Git/GitHub, Agile/Scrum, and Cross-Functional Stakeholder Communication.

PROFESSIONAL EXPERIENCE

Data Analyst, UnitedHealth Group

Sep 2024 – Present | Remote, USA

- Built utilization and reimbursement performance dashboards in Tableau, aligning cost drivers with clinical quality indicators to support executive decisions around network optimization and value-based care initiatives.
- Implemented FHIR-based data ingestion workflows through AWS Glue, enabling secure payer-provider data exchange while maintaining HIPAA, HITECH, and GDPR compliance across regulated reporting environments.
- Established Snowflake-driven data quality benchmarks measuring completeness, timeliness, and consistency across regional datasets, increasing actuarial forecast confidence and regulatory dashboard accuracy by 28%.
- Created predictive analytics pipelines in Python using Pandas and Scikit-learn to estimate utilization demand, readmission likelihood, and claims outliers, supporting planning decisions across clinical and operations teams.
- Collaborated with data architecture and governance teams to operationalize metadata catalogs, lineage visibility, and quality controls using Informatica and Snowflake, improving audit readiness and enterprise data trust.
- Streamlined HEDIS and CMS reporting processes by automating metric aggregation and scorecard generation through SQL and BI tools, reducing reporting turnaround time and improving compliance transparency.

Data Analyst, Apollo Hospital

May 2022 – Aug 2023 | AP, India

- Delivered executive-facing Power BI analytics by unifying EHR, HL7, and FHIR feeds, providing leadership visibility into patient outcomes and regulatory performance while reducing ad hoc reporting volume by 60%.
- Automated end-to-end claims and clinical ETL pipelines using Python, SQL, and Apache Airflow, significantly reducing manual ICD-10 and CPT data preparation effort by 45% and accelerating daily refresh cycles.
- Led modernization efforts to migrate on-prem healthcare datasets into Google BigQuery via Azure Data Factory, lowering infrastructure costs by 19% while enforcing GDPR- and HIPAA-aligned governance standards.
- Developed Tableau dashboards supporting HIPAA audits and GDPR risk tracking, enabling compliance teams to monitor controls, close gaps faster, and improve regulatory reporting efficiency by 36%.
- Supported population health and clinical reporting by standardizing ICD and clinical code mappings across source systems, reducing downstream reporting discrepancies across analytics and compliance teams.
- Implemented data validation and reconciliation frameworks using Informatica and Azure Data Factory, ensuring consistency across EHR, claims, and operational sources feeding enterprise analytics and compliance reports.
- Applied statistical and machine learning techniques in Python to model readmission risk, length-of-stay trends, and mortality indicators, improving clinical decision support accuracy by 21% across inpatient services.

EDUCATION

Master of Science, George Mason University

Aug 2023 – May 2025 | VA, USA

Data Analytics Engineering

Bachelor of Technology, National Institute of Technology

Aug 2019 – May 2023 | AP, India
