EDUCATION

Masters in Data Science, Arizona State University (GPA: 3.8/4.0)

May 2026

- Projects in BI, forecasting, and analytics using Python, SQL, Power BI, and Tableau.

Tempe, United States

Bachelors in Computer Engineering, RAIT, DY Patil University (GPA: 3.81/4.0)

May 2024

- Data-focused projects in NLP, forecasting, and automation using Python, R, SQL, and ML tools.

Navi Mumbai, India

PROFESSIONAL EXPERIENCE

Business Intelligence Project Intern | Arizona State University, Tempe, Arizona

May 2025 – September 2025

- Built Power BI and Tableau reports with DAX and Power Query, decreased weekly reporting time by 25% across teams.
- Integrated Google Analytics 4, CRM exports, and BigQuery into a KPI layer, increased dashboard adoption by 40%.
- Optimized SQL models and refresh windows, decreased data latency by 30% for weekly performance routines.
- Created Excel and PowerPoint packs tied to live dashboards, decreased prep time by 6 hours per week.

Data Analyst Intern | Kopran, Navi Mumbai, India

June 2023 – September 2023

- Improved data pipeline efficiency by 30% by optimizing MySQL workflows using views, stored procedures, and triggers.
- Crafted Power BI dashboards and automated reports with Python, reducing manual work by 25%.
- Performed EDA on 10K+ records using SQL and R to uncover trends and data gaps for KPI tracking.
- Collaborated with business and tech teams to convert raw data into insights aligned with 5+ key performance indicators.

Frontend Developer Intern | Amaze Business Solutions, Mumbai, India

December 2022 – March 2023

- Developed a responsive login page using HTML, CSS, JavaScript, and Bootstrap, increasing input accuracy by 35%.
- Reduced form errors and load time by 25% by streamlining front-end data validation and sorting logic.
- Leveraged modular design and test-driven logic, reducing frontend bugs by 20% during development.
- Engineered interactive UI components using React, incorporating real-time data rendering; the tool is now used by over 20 engineers across the front-end development teams.

ACADEMIC PROJECTS AND PAPER

Investigate the Advancements in Federated Learning Techniques to Enable Privacy-Preserving Machine Learning

- Categorized the research on FL architecture into groups based on the network architecture of the FL system; extended the theoretical framework of FL base designs, defined the broad techniques, and reframed the application's difficulties.
- Authored and published a paper on the same in the international journal- Journal of Advanced Zoology under Scopus in Oct-2023, Volume 44, Issue S-2, ISSN: 0253-7214.

Cryptocurrency Trend Analysis and Prediction | Python, Tableau [Link](#) | [Link](#)

- Delivered market forecasts and trend analysis using Python, automating data workflows and reducing manual tracking by 60% for over 200+ transactions daily.
- Built and deployed an interactive Tableau dashboard to compare actual vs. predicted prices, trading volume, and market trends, increasing data interpretability and user engagement by 40%.

Sentiment Analysis Web Application | Python, NLP, ML, Streamlit [Link](#)

- Led development of a Python and Streamlit web app to analyze 5,000+ text inputs, cutting manual review time by 50%.
- Developed a sentiment analysis pipeline using natural language processing and machine learning techniques to accurately extract and classify subjective information from text, increasing model accuracy by 35%.

NBA Analytics: Predictive Modeling and Tableau KPI Dashboards

- Built an end-to-end NBA analytics project combining SQL/Python feature engineering with a Tableau KPI dashboard that tracks win percentage, points for and against, and point differential, including team drill downs and benchmarking views for top offense and best defense.
- Developed and compared classification models to predict game outcomes, testing Logistic Regression, Random Forest, and tuned XGBoost, and summarized model tradeoffs and key drivers in a stakeholder-friendly dashboard view.

Supermarket Analysis

- Created a Power BI dashboard with slicers and KPIs, reducing report generation time by 30% for business stakeholders.
- Designed a sales dashboard using Power BI that enhanced data comprehension and interactivity for end users by 40%.

TECHNICAL SKILLS

- Analytics and Modeling:** predictive analytics, forecasting, trend analysis, classification (NLP sentiment), KPI design
- Programming:** Python, R | **Business Intelligence:** Power BI (DAX, Power Query) and Tableau | **Data Analysis Skills:** MongoDB, Data mining, Data Wrangling, Big Data | **Data Sources:** Google Analytics 4 (GA4), CRM exports, structured and unstructured data
- SQL and Data:** SQL querying and optimization; MySQL workflows (views, stored procedures, triggers); BigQuery; data wrangling

COURSES AND CERTIFICATIONS

- Udemy:** Complete Machine Learning and Data Science Bootcamp 2023 | The complete Python Pro Bootcamp for 2023
- FORAGE by British Airways:** KPMG AU – Data Analytics Job Simulation | Data Science Virtual Experience Program
- Coursera:** Google – Data Models and Pipeline | Google Business Intelligence | Google – Decisions: Dashboards and Reports
- Harvard Business School:** Certificate in Entrepreneurship Essentials | Certification in Business Analytics
