

Hruthika Reddy Nannuri

Data Analyst

hruthika@mycareermail.com | (405) 339-5177 | USA | [Portfolio](#)

Summary

Analytical and detail-oriented Data Analyst with 1+ years of experience in data extraction, transformation, and visualization. Proficient in SQL, Python, and cloud-based tools to manage large datasets, perform advanced statistical analyses, and generate actionable insights. Skilled in building interactive dashboards and reports using Power BI and Excel to support strategic decision-making. Experienced in collaborating with cross-functional teams in Agile environments, ensuring data accuracy, quality validation, and effective communication of findings to drive business improvements.

Technical Skills

- Data Analysis Techniques:** Cohort Analysis, Time Series Analysis, Trend Analysis, Correlation Analysis, Cost-Benefit Analysis, Feature Aggregation, Behavioral Analysis, Transaction Analysis
- Data Visualization:** Power BI (DAX, slicers, drill-through, KPI cards, data models), Advanced Excel (Pivot Tables, VLOOKUP, Scenario Analysis)
- Programming & Querying:** Python (Pandas, NumPy), SQL (CTEs, window functions, complex queries)
- Cloud & ETL Automation:** AWS Redshift, AWS Athena, AWS Glue, AWS Glue DataBrew, AWS Lambda, ETL Workflow Automation
- Collaboration & Project Tools:** Agile Methodology, JIRA, Confluence
- Data Quality & Validation:** Data Reconciliation, Data Cleansing, Reporting Accuracy Improvement
- Domain Expertise:** Healthcare Cost Optimization, Financial & Transactional Analytics, Customer Behavior & Retention Analysis

Professional Experience

Data Analyst, UnitedHealth Group 01/2025 – Present | Remote, USA

- Worked on Healthcare Cost Optimization Analytics and collaborated with clinical, finance and operations teams in an Agile environment through requirement gathering sessions to analyze healthcare utilization trends and implement cost-reduction strategies that improved overall operational efficiency.
- Used SQL with common table expressions and window functions to extract healthcare service data from AWS Redshift and Athena and built optimized ETL workflows from CSV and Parquet sources using AWS Glue to accelerate data processing performance.
- Conducted cost-benefit and cohort analysis to identify high-cost regions and patient cohorts and uncovered that a significant portion of inpatient visits were avoidable leading to actions that reduced healthcare spending by millions of dollars.
- Utilized Python with NumPy and Pandas to clean and transform large-scale datasets and performed correlation analysis and feature aggregation to identify provider-level cost variation across a vast number of patient records.
- Led data validation efforts for ETL pipelines using AWS Glue DataBrew and AWS Lambda by reconciling staging and production outputs and ensured highly accurate datasets by resolving multiple quality and transformation issues.
- Built interactive Power BI dashboards using drill-through pages, KPI cards and regional slicers and applied DAX to calculate cost per service allowing executives to monitor key performance trends and visualize projected savings in the range of millions of dollars.

Associate Data Analyst, HSBC 02/2024 – 12/2024 | Remote, USA

- Conducted transaction and behavioral analysis on over 5 million customer records across retail banking channels to identify usage patterns, peak transaction hours, and preferred banking services—informing HSBC’s digital engagement and personalization tactics.
- Collaborated cross-functionally with Risk, Compliance, and Customer Experience teams in an Agile environment, capturing business requirements, defining financial KPIs, and documenting deliverables in JIRA and Confluence—improving project alignment and execution speed by 20%.
- Utilized SQL to extract and process large volumes of customer and transactional data, ensuring structured and clean datasets for regulatory reporting and strategic analytics, reducing data discrepancies by 25%.
- Leveraged Python (Pandas, NumPy) and Advanced Excel (VLOOKUP, Pivot Tables) to analyze customer activity, daily account usage, and regional engagement trends—providing timely insights for marketing, risk mitigation, and product strategy.
- Performed rigorous data validation and monthly financial reporting in Power BI, using DAX (CALCULATE, FILTER) to ensure accuracy in revenue tracking, product performance, and compliance metrics—boosting reporting accuracy by 30%.
- Built dynamic Power BI dashboards with advanced features like Slicers and Data Models to monitor account activity, customer churn, and retention metrics—supporting executive decisions with real-time, data-driven visuals.
- Partnered with Finance and Product teams to analyze subscription product performance, churn rates, and promotional campaign ROI using Excel’s Scenario Analysis—leading to optimized pricing models and a 15% increase in user retention.

Education

Bachelor of Science, Oklahoma State University Stillwater, OK, USA
Computer Science 08/2021 – 12/2024

Projects

Customer Segmentation Analysis

Created a Python clustering model to segment retail customers using demographic and transactional data, enabling targeted marketing that boosted campaign effectiveness and customer engagement by revealing unique behavior patterns.

Sales Performance Dashboard

Created an interactive Power BI dashboard integrating multiple data sources to track and visualize sales KPIs, regional trends, and product performance, facilitating real-time insights for sales teams and driving data-driven decision-making.
