SUMMARY

Supply Chain Analyst with 3+ years improving production-planning accuracy, strengthening MRP/BOM readiness, and enhancing material flow across high-volume automotive and EV manufacturing environments. Skilled in SAP MM/PP, MRP/MPS execution, capacity planning, safety-stock optimization, Kanban refinement, supplier reliability analysis, and data-driven forecasting using Python, SQL, Power BI, and Minitab. Adept at reducing shortages, improving on-time availability, supporting ECO integration, and partnering with engineering, procurement, and production teams to sustain stable, efficient manufacturing operations.

TECHNICAL SKILLS

Manufacturing & Operations: Production planning, capacity management, MRP/MPS execution, BOM governance, material flow coordination, lean operations, plant logistics support, workflow optimization, cross-functional collaboration.

Process Optimization & Analytics: OEE tracking, throughput improvement, cycle-time reduction, SPC/SQC analysis, defect trending, scrap minimization, RCA techniques, VSM mapping, yield enhancement, data-driven optimization.

ERP, MES & Automation Systems: SAP MM/PP/QM, Oracle Manufacturing Cloud, Siemens OpCenter MES, FactoryTalk, barcode/RFID solutions, WMS/TMS tools, automated workflows, master-data accuracy, production-system support.

Data Engineering & Reporting: SQL queries, Python analytics, Minitab statistics, Power BI dashboards, Excel automation, demand forecasting, KPI development, anomaly detection, scenario planning, operational performance reporting.

Quality, Compliance & Risk: APQP practices, PPAP documentation, PFMEA reviews, ISO/IATF standards, control-plan management, 8D corrective actions, CAPA execution, NCR handling, audit readiness, regulatory compliance alignment.

Supply Chain & Inventory Management: Material planning, supplier coordination, safety-stock optimization, lead-time analysis, reorder modeling, inventory accuracy, procurement support, logistics collaboration, replenishment stability, cost-reduction initiatives, strategic sourcing alignment

PROFESSIONAL EXPERIENCE

Supply Chain Analyst, *Lucid Motors*

Aug 2024 – Present | CA, USA

- Improved production continuity by recalibrating MRP parameters, aligning BOM structures, and strengthening planning accuracy to prevent recurring part disruptions affecting daily electric vehicle assembly operations.
- Reduced shortage-related escalations by 31% through Python-driven variability analysis, optimizing safety-stock thresholds and reinforcing supply continuity for high-priority powertrain and chassis components.
- Accelerated decision-making by creating integrated Power BI dashboards consolidating supplier performance, consumption trends, and exception alerts, decreasing average response time to emerging material issues by 28%.
- Strengthened pre-build readiness by coordinating ECO integration across procurement, engineering, and production teams, ensuring configuration accuracy and reducing unnecessary rework during prototype validation cycles.
- Increased workstation continuity by refining Kanban replenishment intervals, improving WIP visibility, and reducing micro-interruptions on high-utilization stations by 17% through structured material-flow enhancements.
- Enhanced supplier communication by analyzing lead-time fluctuations, identifying recurring risk patterns, and driving corrective alignment to support uninterrupted schedules during peak manufacturing windows.
- Elevated manufacturing preparedness at Lucid Motors by conducting scenario-based demand planning, aligning supply capacities with build targets, and supporting controlled ramp-up for new vehicle variants.

Supply Chain Analyst, *Mahindra & Mahindra*

Jan 2021 – Jul 2023 | MP, India

- Coordinated planning activities between procurement, plant logistics, and distribution hubs, reducing replenishment delays by 13% through tighter collaboration and material requirement alignment across key component categories.
- Standardized SAP MM purchasing workflows, improving material coding accuracy and reducing PO correction loops by 21%, which accelerated warehouse receiving efficiency across manufacturing units.
- Managed supplier onboarding and material master governance in SAP and Oracle extensions, improving data integrity and cutting approval turnaround times by 18%, enabling faster sourcing and contracting decisions.
- Optimized safety stock settings by analyzing lead-time variability and consumption trends, maintaining high material availability while preventing excess buildup, lowering holding costs for selected high-usage parts by 8%.
- Led Lean-driven assessments to eliminate duplicate documentation loops and redundant approval tasks, improving cycle time and reducing non-value-added activities by 12% across planning workflows.
- Monitored supplier performance using on-time delivery, logistics compliance, and responsiveness KPIs, supporting corrective action plans that improved delivery reliability for critical components by 10–14%.
- Maintained controlled planning documentation using Jira and structured change logs, improving cross-team adoption during process updates and reducing rework caused by communication gaps for distributed procurement teams.

EDUCATION

Master of Science, *California State University*
Engineering Management

Aug 2023 – May 2025 | CA, USA

Bachelor of Technology, *National Institute of Technology*
Mechanical Engineering

Jun 2017 – May 2021 | MP, India
