

SUMMARY

**Data Engineer** professional skilled in **SQL, Python, Excel, Power BI, and Tableau**, with experience delivering **actionable insights, interactive dashboards, and decision-support analytics**. Strong focus on **data accuracy, data governance, and cross-functional collaboration** to translate **complex datasets** into **business-driven insights** for key stakeholders.

PROFESSIONAL EXPERIENCE

**Data Engineer | Tata Consultancy Services (TCS) | Bengaluru, India** **June 2023 – November 2023**

- Engineered and deployed analytics-ready fact and dimension tables on Redshift and Snowflake using dbt, supporting same-day transaction, risk, and regulatory reporting.
- Architected and unified a scalable lakehouse on Amazon S3 with Apache Iceberg, integrating batch, streaming, and API data while enabling schema evolution, time travel, and historical reconstructions for audit and risk analysis.
- Optimized and automated complex SQL workflows with recursive CTEs, lateral joins, and materialized views, accelerating cohort analysis, segmentation, and exception investigations for downstream analytics and ML models.
- Instituted automated data validation and quality frameworks using Deequ and Great Expectations, enforcing CDC integrity, schema adherence, and audit logging, eliminating recurring defects and manual backfills.
- Orchestrated containerized data pipelines with Docker and Kubernetes, enforcing access controls, lineage tracking, and cross-team collaboration to deliver point-in-time correct datasets for risk scoring, next-best-action models, and leadership reporting.

**Data Analyst | GE HealthCare | India** **October 2022 – May 2023**

- Consolidated and harmonized clinical and operational datasets from multiple source systems using SQL and AWS Glue, enabling insights across 1M+ patient and service records.
- Revamped and operationalized ETL processes, improving data refresh reliability and reducing repetitive manual tasks by ~60 staff hours each month.
- Designed and maintained interactive Power BI dashboards to monitor service utilization, throughput, and operational KPIs for 20+ clinical and operations stakeholders.
- Diagnosed and resolved data inconsistencies in historical healthcare datasets to enhance capacity planning, demand forecasting, and operational reviews.
- Standardized and validated data definitions across reporting layers, strengthening metric reliability and stakeholder trust.
- Collaborated cross-functionally with clinical, IT, and operations teams to translate requirements into scalable analytics workflows, ensuring compliance and traceability for audits and multi-hospital reporting.

**Data Analyst Intern | GE HealthCare | India** **July 2022 – October 2022**

- Assisted in developing SQL-based KPI reports and performing data validation for executive dashboards.
- Conducted ad-hoc analyses and supported recurring reporting cycles using Excel and Tableau.
- Identified data anomalies and maintained reporting workflows to ensure process continuity and knowledge transfer.

PROJECT

**Cloud-Based Real-Time Fraud Detection & Analytics Platform**

- Built and managed analytics workflows, fraud detection models, and rule-based alerts to monitor transactions, exceptions, and risk indicators in near real-time.
- Created and documented Power BI and Tableau dashboards, data flows, and reporting logic to support compliance, operations, and scalable governance.

TECHNICAL SKILLS

- Programming & Scripting:** Python (Automation & Scripting), SQL (Advanced: Recursive CTEs, Lateral Joins, Materialized Views, Query Optimization), Scala, R
- Data Engineering & Integration:** ETL Pipelines (SSIS, AWS Glue), Batch & Streaming Processing, API Ingestion, Change Data Capture (CDC), Data Integration Patterns
- Analytics Engineering & Data Modeling:** dbt (Incremental Models, Materializations, Governed Fact & Dimension Layers), Star & Snowflake Schemas, Analytics-Ready Data Design, Feature Engineering Datasets, Segmentation & Cohort Analysis, KPI Definition & Reporting
- Cloud Data Warehousing & Lakehouse:** Snowflake, Amazon Redshift, MySQL, PostgreSQL, SQL Server, AWS S3, Apache Iceberg (Schema Evolution, Time Travel), Azure Data Lake, GCP BigQuery, DataFlow
- Business Intelligence & Visualization:** Tableau, Power BI, Advanced Excel (Pivot Tables, Lookups, Macros, VBA), Self-Service Analytics Enablement, Dashboard Development
- Machine Learning & AI Enablement:** Supervised & Unsupervised Learning (Regression, Classification, Clustering), Decision Trees, Random Forest, Logistic Regression, Neural Networks, NLP & Text Analytics (Sentiment Analysis, NLTK), GenAI Pipelines, Point-in-Time Features, Training & Inference Pipelines, Risk Scoring Models, Next-Best-Action Models
- Data Quality, Governance & Security:** Data Validation, Deequ, Great Expectations, Data Quality Frameworks, Reconciliation, Audit Logging, Schema Validation, Azure Purview, RBAC, Metadata Management, Data Lineage
- Platform Engineering & DevOps:** Docker, Kubernetes, Containerized Data Workloads, Git, Jenkins, Jira, Confluence, Zephyr Scale, Jupyter Notebook, Google Colab, Agile/Scrum Methodology

EDUCATION

**St. Francis College** **January 2024 – December 2025**  
*Masters in Information technology and management* *Brooklyn, NY*

**PVP Siddhartha Institute of Technology** **May 2023**  
*B. Tech in Electronics and Communication Engineering* *India*
