SUMMARY

Business Data Analyst with 3+ years of experience bridging stakeholder needs with technical execution to streamline operations and enhance decision-making. Expert in requirements elicitation, SQL-based insights, and Agile methodology. Proficient in designing analytical frameworks, creating comprehensive documentation, and leveraging Python and BI tools for process optimization.

SKILLS

Methodologies & Frameworks: SDLC, Agile (Scrum, Kanban), Waterfall

Programming Languages: Python (Pandas, NumPy, SciPy, Matplotlib, Seaborn, TensorFlow), SQL, R

Database: Microsoft SQL Server, PostgreSQL, MySQL

Business Analysis: Requirements Gathering, FRD/BRD Documentation, UAT Testing, Cost/Benefit analysis, Impact analysis, SWOT Analysis, GAP Analysis, User Story Mapping, Use Cases, Risk Analysis, Change Management, Business Process Modeling, JAD sessions, User interviews

Stakeholder Management: Cross-Functional Collaboration, Training Programs, End-User Support, Stakeholder Communication

Data Visualization Tools: Tableau, Power BI, Advanced Excel

Project Management and Version Control: Jira, Confluence, MS Project, SharePoint, ServiceNow, Git, GitHub

Soft Skills: Critical Thinking, Problem Solving, Attention to Detail, Strategic Planning, Analytical thinking, Team Collaboration, Leadership

EDUCATION

Master of Science in Business Analytics | University of New Haven, New Haven, CT

May 2025

Bachelors in Commerce and Computer Applications | Kasturba Gandhi Degree College (Osmania University), India

May 2022

PROFESSIONAL EXPERIENCE

Business Data Analyst | BNY, Connecticut

September 2024 - Current

- Accelerated treasury settlement processes by 18% by conducting stakeholder interviews, performing **SQL** data profiling on 500+ daily transactions, and documenting **BRD** requirements for automated reconciliation workflows.
- Enabled **KYC** process improvements saving 32 operational hours weekly through gap analysis, **SQL** data profiling of existing workflows, and creating as-is/to-be process documentation adopted by compliance team.
- Supported 14% improvement in cross-sell conversion rates by gathering dashboard requirements through user interviews and designing **Power BI** data model specifications integrating **CRM** and transactional data sources.
- Improved quarterly financial reporting accuracy by 16% by creating 20 user stories in **Jira**, coordinating **UAT** sessions with finance stakeholders, and performing **SQL**-based data lineage analysis across reporting systems.
- Ensured **SOX** compliance for credit exposure reporting by facilitating risk analyst workshops, documenting 50+ business rules in **FRDs**, and validating data quality using **Python** scripts for ongoing monitoring.

Business Data Analyst | Vivma Software Inc, India

August 2021 – July 2023

- Reduced manual claims processing errors by 28% by gathering **ETL** requirements through workshops, defining **SSIS** pipeline specifications for 50,000+ patient records, and performing **SQL** data validation testing.
- Accelerated prior authorization turnaround by 26% by facilitating **Agile** sprint planning sessions, creating user stories with acceptance criteria, and performing **SQL** validation testing for claims adjudication rule engines.
- Strengthened claims forecasting accuracy by 19% by conducting statistical analysis using **Python** on three years of historical data, designing **ARIMA** model specifications, and documenting findings for actuarial team.
- Increased insurance authorization approval rates by 12% by gathering requirements through clinical staff interviews, analyzing utilization patterns via **SQL** queries, and defining **Tableau** dashboard specifications for clinicians.
- Advanced risk-adjusted premium strategy alignment by performing member segmentation analysis using **Python** and **SQL**, applying **K-means clustering** techniques, and documenting findings mapped to **CMS** Star rating metrics.

PROJECTS

Traffic & Toll Violation Analysis – Port Authority of NY & NJ: Analysed traffic, toll, weather, and NYC event data performing Python feature engineering and SARIMA forecasting. Leveraged Azure AutoML to optimize XGBoost for traffic prediction and Random Forest for violation detection achieving 98% accuracy and 99% recall. Designed Power BI dashboards with DAX measures revealing seasonal patterns and violation hotspots, enabling dynamic toll pricing and targeted enforcement recommendations.

Quarter-End Financial Reporting Mock-Up (Excel, SQL): Designed interactive Power BI dashboard tracking sales performance, profitability, and regional trends using star schema data modeling across Orders, Products, Customers, and Geography tables. Developed DAX measures for Total Profit, Profit Margin, and YoY Growth with dynamic visualizations and slicers. Enabled stakeholders to identify top-performing categories, underperformers, and seasonal demand patterns through data-driven exploration and storytelling.
