

VARDHAN CHENNABATHNI MANDULA

(408) 909-2089 | mvardhanchennabathni@gmail.com | [Linkedin](#)

SUMMARY

Supply Chain Analyst with around 5 years of experience in demand forecasting, inventory planning, procurement analysis, and logistics optimization. Proficient in Python, Power BI, SQL, VBA, and SAP ERP for data-driven process improvement. Experienced in S&OP, JIT, Value Stream Mapping, and supplier performance evaluation. Applied RFID/IoT integration and automation to enhance warehouse visibility and reduce cycle time. Strong record of improving forecast accuracy, lowering operating costs, and increasing supply reliability through structured data analysis and coordination across global teams.

SKILLS & CERTIFICATIONS

Programming & Supply Chain Tools: Python, SQL, VBA, SAP ERP (MM, PP, IBP), SAP S/4 HANA Cloud

Inventory & Demand Planning: Forecasting, EOQ, Safety Stock, JIT, S&OP

Process Optimization: Value Stream Mapping, Root Cause Analysis (5-Why, Fishbone)

Logistics & Operations: Warehouse Management Systems (WMS), Transportation Management Systems (TMS), Inbound/Outbound Logistics, Supplier Score carding, Order Management, RFID/IoT Supply Chain Integration

Analytics & Reporting: Hypothesis Testing, Cycle Time Analysis, A/B testing, Power BI, Tableau, Advanced Excel

Risk & Failure Analysis: Failure Mode and Effects Analysis (DFMEA, PFMEA)

Cloud & Databases: SQL Server, MySQL, Oracle SCM Cloud, AWS S3

Core Competencies: Project Management, Demand Forecasting, Inventory Management, Procurement & Supplier Management, Risk Control Management, Continuous Process Improvement, Warehouse & Supply Chain Optimization, Cross-functional Team Collaboration, Supplier Relationship Management, Procurement Support, Stakeholder Engagement, Global Supply Chain Coordination, KPI Management

Certifications: Microsoft: Programming using Python - [Link](#) | AWS Certified Solutions Architect – Associate - [Link](#)

WORK EXPERIENCE

Wayfair, USA | Supply Chain Analyst

September 2024 - Present

- Optimized inventory planning across 15+ fulfillment centers using EOQ and Safety Stock models, improving order fulfillment by 12% and cutting annual holding costs by \$1.3M through Python-based demand simulations integrated with enterprise planning systems.
- Streamlined inbound logistics performance by applying 5-Why and Fishbone Analysis to supplier and carrier data, resolving recurring bottlenecks and reducing average lead time by 18%, while enhancing on-time supplier delivery reliability to 96%.
- Boosted warehouse efficiency through transaction-level WMS audits and automated KPI dashboards built in Python, leading to a 10% throughput improvement and 9% reduction in labor utilization across high-volume facilities.
- Executed SKU-level demand classification using ABC/XYZ segmentation on 20,000+ active products, enabling differentiated replenishment and safety stock strategies that reduced stockouts by 14% and optimized working capital deployment.
- Improved supplier performance management through Design Failure Mode and Effects Analysis (DFMEA) driven risk assessments and data-based negotiations, cutting procurement cycle time by 11% and minimizing part failure incidents.
- Redesigned order management workflows in collaboration with logistics, finance, and fulfillment teams, integrated real-time data from ERP and TMS systems to raise order accuracy by 15% and improved end-to-end visibility across inbound and outbound flows.

Tata Consultancy Services, India | Supply Chain Analyst

August 2021 – July 2023

- Engineered demand forecasting models using Python and Power BI, integrating real time sales data from AWS S3, which improved forecast accuracy by 19% and optimized replenishment planning across global distribution hubs.
- Automated procurement performance reports through VBA and SAP ERP, reducing manual reporting time by 30% and increasing visibility into supplier lead-time deviations for proactive procurement support.
- Accomplished S&OP and JIT alignment studies to synchronize production and delivery schedules, minimizing excess inventory by 11% and improving line-side material availability for key manufacturing clients.
- Utilized Value Stream Mapping and PFMEA techniques to identify process bottlenecks and potential failure modes in supply workflows, achieving a 14% reduction in process variation and enhancing quality control compliance.
- Led RFID/IoT based tracking pilot for real-time logistics monitoring, performing hypothesis and A/B testing on sensor data accuracy, which improved shipment traceability by 21% and strengthened KPI management across the global supply network.

Endurance Technologies, India | Jr. Supply Chain Analyst

January 2020 – July 2021

- Developed demand forecasting models in Python using historical sales and production data, increasing forecast accuracy by 16% and reducing excess raw material inventory by 9%.
- Designed supplier performance scorecards leveraging MySQL and Power BI, tracking on-time delivery, cost variance, and quality KPIs, which improved supplier reliability ratings by 12%.
- Enhanced transportation planning through TMS data analysis and A/B testing, identifying cost-effective routes that reduced average freight cost per shipment by 10% and enhanced delivery consistency.
- Performed cycle time and warehouse efficiency analysis using Advanced Excel and cross-functional collaboration, achieving a 13% reduction in process bottlenecks and improving throughput across key manufacturing plants.

EDUCATION

Master of Science (MS), Information Technology | University of Cincinnati, OH, USA

December 2024

B.Tech in Computer Science & Engineering | Jawaharlal Nehru Technological University, Hyderabad, India

June 2021
