

SANRAJ SANDIP BHOSALE

San Diego, CA | +1 (619) 398-6462 | sanrajsb111@gmail.com | <https://www.linkedin.com/in/sanrajsb111>

SUMMARY

Analytics Engineer with experience designing and deploying data pipelines, developing Python scripts, and building enterprise applications using Java and Spring Boot. Skilled in SQL, Python, AWS cloud, Docker and CI/CD pipelines, creating automated data ingestion processes and scalable ETL workflows. Proven track record of visualizing and analyzing large datasets to drive insights in research and production environments.

EDUCATION

San Diego State University

Aug 2024 - May 2026

Master of Science, Computer Science

- **Coursework:** Algorithm Analysis & Design-CS660, Machine Learning -CS549, Database Theory and Implementation-CS514

Ramrao Adik Institute of Technology

Aug 2019 - May 2023

B.E., Information Technology

- **GPA:** 3.75/4
- **Coursework:** Machine Learning, Data Structure & Analysis, Blockchain & Distributed ledger technology OOP, Software Development, Cloud Computing.

SKILLS

- **Programming Languages:** Java, JavaScript, Python, TypeScript, C++, Go
- **Web Technologies:** HTML5, CSS3, Bootstrap, Rest API, GraphQL, Spring Boot
- **Frameworks:** NodeJS, ReactJS, Redux, Express, PassportJS, Hibernate
- **Databases:** NoSQL - MongoDB, Redis, Firebase, MySQL, PostgreSQL, SQLite
- **Cloud Technologies:** AWS (Amazon Web Services), Docker, Kubernetes
- **CI/CD Tools:** Jira, Jenkins, GitLab, ELK Stack, GitHub Actions
- **AWS Services:** EC2, S3, RDS, Lambda, Step Functions, CloudWatch, DynamoDB, ElastiCache, API Gateway, SQS
- **Tools:** Git, ELK stack, Postman, Apache Kafka, Selenium, GitHub Copilot

PROFESSIONAL EXPERIENCE

San Diego State University

Aug 2024 - Present

Graduate Research Assistant

San Diego, USA

Engineered and deployed real-time data solutions for web servers, utilizing WRDS to enhance data accessibility and analysis.

- Designed, developed, and implemented ELT pipelines in Azure Data Factory to ingest, clean, and transform financial data, automating tasks with python scripts.
- Utilized Databricks notebooks with pyspark to apply machine learning strategies for risk mitigation and enhanced data security.

C2L

Aug 2023 - Dec 2023

Software Engineer

Mumbai, India

Developed and maintained enterprise-level applications using Java and Spring Boot, achieving a significant improvement in system performance through code optimization and efficient architecture.

- Collaborated with cross-functional teams using Git for version control and CI/CD to define, design, and deploy new features, driving an enhanced user experience and measurable increase in customer satisfaction.
- Integrated RESTful web services with Azure SQL and Azure Data Lake for secure, scalable data exchange across distributed systems.

ACHIEVEMENTS AND LEADERSHIP

- Led a team of 5 people to design and develop a Secure Covid 19 Hospital System (SHCS) as a part of a course project.

PROJECTS

RetailX - Multi-Channel Marketplace with Seller Dashboards

- Designed and developed a polyglot full-stack e-commerce system with a React/Next.js buyer storefront, Vue/Nuxt.js seller dashboard, and a Node.js + Express.js backend using PostgreSQL + Prisma ORM.
- Implemented JWT authentication, RBAC, REST/GraphQL APIs, and real-time order tracking with Socket.IO + Redis pub/sub to enhance user experience. Built shopping cart, order management, and checkout workflows with Stripe/PayPal integration, and engineered seller dashboards with inventory management, analytics, and KPIs.
- Deployed containerized microservices to AWS ECS with RDS (Postgres), S3 storage, Docker, and automated pipelines via GitHub Actions CI/CD. Optimized application scalability, caching, and reliability using Redis, load balancing, and microservices architecture.

FinGuard - Personal Finance & Fraud Detection Platform

- React.js, Spring Boot, Python (FastAPI), PostgreSQL, Kafka, Redis, AWS, Docker
- Developed a full-stack finance platform with React.js frontend & Spring Boot microservices for transaction management & budgeting.
- Integrated a Python ML microservice (FastAPI, scikit-learn, XGBoost) to detect fraudulent transactions in real time.
- Implemented Kafka for event-driven processing, Redis caching, and WebSockets for instant fraud alerts and notifications.
- Built role-based dashboards with analytics, expense tracking, and report exports (PDF/Excel).
