

# COURTNEY LO

+1 (310) 848-4935 • Los Angeles, CA

courtneylo888@gmail.com • linkedin.com/in/courtneylo • github.com/courtneyclo

## Objective

---

Data Analyst with 1+ years of experience in data analysis, statistical modeling, and visualization using Python and SQL. Skilled in transforming complex datasets into actionable insights to support data-driven decision-making. Seeking full-time data analyst roles.

## Education

---

### University of California San Diego

2021 – 2025

*Bachelor of Science in Molecular and Cell Biology, Minor in Computer Science*

*GPA: 3.54*

## Skills

---

**Languages & Tools:** Python, SQL, R, Git, Bash, Microsoft Excel, Jupyter Notebook

**Data Engineering & Analytics:** ETL/Pipeline Automation, Data Cleaning, Data Transformation, A/B testing

**Data Visualization:** Tableau, Power BI, Matplotlib, Seaborn, Interactive Dashboards

**Statistical & Machine Learning:** Regression Modeling (Linear, Logistic, Polynomial), Clustering, Feature Engineering, Ensemble Methods, Classification Models, Neural Networks, NLP, LLMs (experience with AI models)

## Experience

---

### Atrium

May 2025 – February 2026

*Data Analyst*

*Remote*

- Architected reusable AI systems by building Vellum prompt frameworks and CLI-based Claude agents, leveraging GenAI tools and RAG techniques with standardized skills and setups to improve pipeline coverage, consistency, and scalability.
- Boosted processing efficiency and expanded algorithm data coverage by 30% through code and pipeline optimization.
- Wrote advanced SQL queries and production-level code to power analytics, internal tooling, and system integrations.
- Developed processes and monitoring dashboards to track data quality, throughput, and system performance in real time.

### Belharra Therapeutics

June 2024 – August 2024

*Data Analyst Intern*

*Sorrento Valley, CA*

- Optimized Python-based data pipelines, reducing processing time by 50% for large-scale proteomic datasets and enabling faster insights.
- Built automated data collection scripts (BeautifulSoup) to enhance dataset coverage and support downstream analysis.
- Developed reusable data visualization workflows for 20+ structural datasets, improving clarity and efficiency of analysis reporting.

### Immunology Center of Georgia

January 2024 – June 2024

*Data Analyst Intern*

*Remote*

- Analyzed bulk RNA-seq datasets using R and Python, identifying key trends and correlations between ERV expression and clinical outcomes.
- Implemented statistical models to quantify treatment effects, supporting data-driven decision-making for healthcare initiatives.
- Designed interactive R Shiny dashboards to visualize complex biological datasets, improving accessibility of insights for stakeholders.

## Certifications

---

### IBM Data Science Professional Certificate

September 2023

- Python (Pandas, Numpy), SQL, data cleaning, visualization, machine learning models

### HackerRank Java Skills

May 2022

- Tested understanding of Java concepts including classes, data structures, inheritance, and exception handling
- Practiced coding problems and implementations
