SUMMARY

Supply Chain and Production Planning professional with expertise in demand forecasting, supply planning, procurement, production scheduling, and end-to-end supply chain optimization. Proficient in ERP systems, advanced analytics, and Lean methodologies, with the ability to streamline processes, enhance efficiency, and align supply chain strategies with business goals. Adept at supporting S&OP cycles and collaborating across cross-functional teams to ensure cost-effective, reliable, and scalable operations.

SKILLS

- Scheduling, Demand Planning, Supply Chain Planning, Risk Forecasting, Procurement, Strategic Sourcing, Purchasing, Process Improvement, Buyer, INCOTERMS, Logistics Operations, Raw Material Planning, Capacity Planning, Pivot Table, VLOOKUP, Data Analysis, S&OP, Supply Planning, Six Sigma, Supply Chain Management, Production Planning, Lean Principles, Inventory Management, Supplier Relationship Management, Kaizen, JIT, PFEP, MRP, and Project Management.
- Software:** MS-OFFICE (Word, Excel, PowerPoint, Access, PowerApps), Tableau, ERP (SAP, Blue Yonder, Infor) and Power BI.
- Optimization Tools & Programming Languages:** CPLEX Optimization Studio, GAMS, SQL, VBA, Python and C.

EXPERIENCE

Walgreens, United States

January 2025 – Present

Supply Chain Analyst

- Enhanced demand planning by integrating POS, promotional, and seasonal data through SAP APO and Blue Yonder, ensuring 18% accurate forecasting and improved service levels.
- Developed and implemented a supplier performance scorecard, tracking on-time delivery and quality metrics, which improved the reliability of key suppliers by 15%.
- Conducted an ABC analysis on over 5,000 SKUs, re-evaluating safety stock levels and reorder points in SAP, resulting in a 20% reduction in stockouts for high-demand 'A' items.
- Collaborated with logistics and distribution center teams to optimize the inbound flow of materials, reducing warehouse receiving bottlenecks and mitigating potential demurrage charges by over \$15K annually.
- Developed and maintained rolling demand forecasts using historical sales data, and market trends to support accurate planning achieving 50% accuracy. Presented daily in Gemba meetings of Supply Planning, Shipments and Production Planning.
- Led Lean procurement project by optimizing Kanban card quantity using inventory management and process improvement reducing raw material costs by 6%. Forecasted demand using Excel and S&OP, achieving 50% forecast accuracy.
- Faced with frequent order errors, organized production plans using Infor ERP and MRP tools, reducing order processing errors by 10%. Maintained inventory levels per customer demand using MRP and inventory management tools.
- Used Pivot Tables and VLOOKUP on ERP data to redefine reorder points and safety stock, achieving 5% capital cost savings and 8% inventory reduction amid raw material surpluses.

7FinCorp Group, India

January 2020 – July 2023

Production Planner

- Performed demand planning using historical data and forecasting models to ensure optimal inventory levels and reduce stockouts. Managed supplier relationships, resolving issues and improving supplier performance.
- Negotiated supplier contracts using strategic sourcing methods, achieving 10% average cost savings. Reduced production planning errors and eliminated bottlenecks by applying data analysis and process improvement tools.
- Streamlined end-to-end supply chain flow by simplifying processes, reducing lead times by 12%, and boosting customer satisfaction. Improve reverse logistics using DMAIC to simplify return steps, and lowering return process costs.
- Aligned supply chain priorities by managing stakeholder expectations using S&OP, process improvement methods, and project management tools. Performed quality inspections aligned with ISO 9001 standards to ensure supplier compliance.
- Analyzed historical shipment data using SQL to identify key logistics bottlenecks, presenting findings that informed the optimization of 3 primary shipping lanes and improved on-time delivery by 8%.
- Documented and standardized the material receiving and quality inspection process, creating a new SOP that was adopted by the warehouse team and reduced documentation errors by over 15%.
- Supported ERP migration to SAP & BPCS by mapping workflows and training users, improving material planning accuracy.

EDUCATION

Master of Science in Supply Chain Management

August 2023 – May 2025

Dallas Baptist University, Dallas, Texas
