

SAI KIRAN GORILA

Business Data Analyst

[\(314\) 282-5720](tel:3142825720) | Saikiran4go@gmail.com | [LinkedIn](#)

Professional Summary

Business Data Analyst with 3 years of experience supporting financial operations, regulatory reporting, and enterprise analytics across banking, lending, and investment environments. Skilled in performing exploratory data analysis, building automated reporting pipelines, and developing executive dashboards using SQL, Python, Power BI, Tableau, and SSRS. Experienced in integrating and validating large financial datasets, ensuring data accuracy for pricing, claims, credit risk, and compliance-driven initiatives. Adept in data governance, requirement gathering, and cross-functional collaboration to translate business needs into actionable insights.

Technical Skills

Business Analysis & Documentation: Business Requirements Gathering (BRD, FRD), User Stories, Gap Analysis, Stakeholder Communication, Change Management

Process Modeling & Workflow Design: BPMN 2.0, Current-State vs Future State Mapping, Microsoft Visio, Process Flow Diagrams

Data Analysis & Validation: SQL, Data Profiling, Data Validation, Root Cause Analysis, Claims Data Analysis, Asset Data Analysis, Data Governance Compliance

Reporting & Visualization: Tableau, Power BI, KPI Tracking Dashboards, Compliance Audit Dashboards

Tools & Platforms: Jira, Confluence, Microsoft Excel, Informatica, Cloud Migration Platforms

Compliance & Industry Standards: SOX Compliance, AML/KYC Standards, PCI-DSS, Risk & Controls Frameworks (RCM), Data Governance & Audit Readiness

Testing & Quality Assurance: UAT (User Acceptance Testing), Defect Logging & Tracking, Test Sign-off Procedures

Professional Experience

Business Data Analyst | Goldman Sachs Group, USA

Dec 2024 – Present

- Partnered with finance, risk, and operations teams to analyze transactional, pricing, and account-level data, identifying cost leakages and reducing financial discrepancies by 12%.
- Reduced manual reporting time by 30% by developing 8+ interactive Power BI dashboards that enabled executives to track revenue drivers, operational KPIs, and portfolio performance in real time.
- Built SQL scripts, stored procedures, and data transformations in Snowflake and SQL Server to automate recurring financial reports, accelerating data refresh cycles by 40%.
- Conducted root-cause analysis on financial data anomalies using statistical outlier detection, improving data accuracy and reducing reconciliation issues by 25%.
- Automated ETL workflows using Python and cloud-based orchestration tools, reducing manual intervention by 60% and ensuring consistent, high-quality data delivery for analytics and regulatory reporting.
- Created 5 executive-level KPI and performance dashboards integrating revenue, expense, and operational metrics, saving 12+ hours per week in manual reporting and improving transparency across key business units.
- Collaborated with data governance teams to standardize financial data definitions, ensuring alignment with enterprise data quality policies and supporting audit-readiness and compliance requirements.
- Designed process flow diagrams & BPMN models in Visio to document current state vs. future state claims handling processes.

Business Data Analyst | Persistent Systems, India

Aug 2021 - Jul 2023

- Designed and automated Tableau dashboards for sales, delivery, and operations teams, reducing manual reporting cycles and improving real-time visibility into project and revenue metrics.
- Developed and optimized complex SQL queries, stored procedures, and views across relational databases, improving data retrieval performance by 30% and supporting high-volume analytical workloads.
- Led requirement-gathering initiatives through JAD sessions and stakeholder workshops, translating business needs into actionable data specifications and reporting deliverables.
- Conducted risk assessments, SWOT analysis, and feasibility studies to identify process bottlenecks, increasing project success rates and enabling data-driven decision-making.
- Automated data extraction and transformation workflows using AWS Glue and Lambda, reducing reporting latency by 45% and ensuring the timely availability of clean, unified datasets for dashboards.
- Designed ETL pipelines to integrate data from CRM, ERP, and financial systems, improving reporting consistency, data accuracy, and cross-system alignment.
- Built forecasting and trend-analysis models in Excel and Python, enabling business leaders to predict sales performance, resource demand, and operational risks with greater accuracy.
- Authored BRDs, SRS, user stories, and acceptance criteria, ensuring end-to-end alignment between technical teams and business stakeholders during analytics and automation initiatives.
- Automated CRM data pipelines using SSIS and Talend, accelerating Salesforce data integration by 40% and improving downstream reporting reliability.
- Conducted exploratory data analysis (EDA) and performance evaluations of predictive models, applying statistical analysis and data visualization to refine model accuracy and strengthen risk mitigation strategies.

Education

Master of Science in Computer and Information Sciences, Saint Louis University, USA

Aug 2023 - May 2025
