

RAHUL JUTHUGA

DATA ANALYST

TX, USA | M.no: (551)298-3888 | Email: rahuljuthugakumar@gmail.com| [LinkedIn](#)

SUMMARY

- Data Analyst with 4+ years of experience in healthcare and finance, skilled in **Python, SQL, Snowflake, dbt, SSIS**, and **Apache Spark** for building end-to-end data and analytics solutions.
- Designed and deployed scalable ETL pipelines using **AWS Glue, Azure Data Factory, and Snowflake**, improving data accuracy, quality, and governance across structured and semi-structured sources.
- Performed **EDA** and predictive modeling with **Pandas, NumPy**, and **Scikit-learn** to support fraud detection, risk assessment, and patient behavior analysis.
- Developed real-time dashboards in **Power BI, Tableau, and Looker**, reducing manual reporting by 70%, and collaborated with stakeholders to gather **BRD/FRD** aligned with **HEDIS, CMS, SOX**, and **HIPAA compliance**.

TECHNICAL SKILLS

Methodologies	SDLC, Agile, Waterfall
Languages	Python, R, SQL
Analytics / ML	Machine Learning Algorithms, EDA, Ad hoc Analysis, Advanced Analytics, Probability Distributions, Hypothesis Testing, Regression Analysis, Forecasting & Modeling, SAS, Statistics, Linear Algebra, Association Rules, A/B Testing, Data Mining, Data Cleaning, Data Wrangling, Data Storytelling, Data Interpretation
Visualization	Tableau, Power BI, Looker, QlikView, Microsoft Fabric, Advanced Excel (Pivot Tables, VLOOKUP)
ETL / Cloud Platforms	AWS (S3, Lambda, Glue), Microsoft Azure, SSIS, SSRS, Alteryx, dbt, Data Pipeline Development, Data Integration, Data Transformation, Data Warehousing
Databases	MySQL, SQL Server, PostgreSQL, MongoDB, Oracle, Snowflake
Governance / Tools	Collibra, Git, GitHub, MS Visio, IDEs (Visual Studio Code, PyCharm, Jupyter Notebook), Packages (NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, TensorFlow, Seaborn, ggplot2)

PROFESSIONAL EXPERIENCE

Data Analyst | Blue Cross Blue Shield of Texas

Aug 2024- Present

- Take ownership of designing automated data workflows using **Python, SQL, dbt, and SSIS** to ingest patient admissions, lab results, and clinical encounter logs from legacy EMR systems, eliminating repetitive Excel work and accelerating quality reporting and regulatory compliance cycles.
- Perform **EDA** on readmission patterns, lab anomalies, and patient escalations to uncover gaps in care delivery, recurring diagnostic errors, and seasonal admission spikes, with insights drive new clinical validation rules and improve discharge planning policies.
- Built predictive anomaly detection models using **logistic regression** and **random forest** in **Scikit-learn** to flag high-risk patients and abnormal lab results. The deployed model reduced false alerts and helped care management and clinical review teams cut investigation effort by 30%.
- Develop real-time patient monitoring dashboards in **Tableau** to visualize admission trends by department, diagnosis, and patient demographics, replacing static reports and enabling leadership to take proactive actions during Joint Commission audits and value-based care reviews.
- Leverage **SAS** for in-depth actuarial and variance analysis on treatment costs, length-of-stay discrepancies, and reimbursement patterns, with findings support budget planning and data-backed calibration of CMS-compliant reimbursement limits.
- Utilize **Apache Spark** to process 80+ million patient encounters, lab files, and hospital utilization logs, boosting data readiness 4x and ensuring timely delivery to quality reporting teams and regulatory review boards.
- Build scalable ETL pipelines with **Azure Data Factory** and **Synapse Analytics** to integrate structured patient records, imaging files, and unstructured clinician notes, enhancing SLA adherence, data completeness, and powering downstream AI-driven risk and population health monitoring solutions.
- Partner with business stakeholders, compliance officers, and clinical teams to gather **BRD/FRD** requirements, ensuring data workflows, models, and dashboards align with **HIPAA, CMS**, and **Joint Commission** regulatory standards while maintaining data security and governance best practices.
- Deployed a 25% reduction in readmission rates, 20% improvement in care plan adherence, and faster regulatory reporting cycles, enabling hospital leadership to optimize resource allocation, enhance patient outcomes, and maintain compliance with quality standards

Data Analyst| Goldman Sachs, India

Dec 2019 - Jul 2023

- Built **Power BI dashboards & Excel scorecards** to monitor loan portfolio performance, credit risk exposure, and regional revenue trends, enabling finance managers to take proactive actions before quarterly risk committee reviews.
- Designed **Alteryx Designer** workflows to automate ingestion and transformation of loan transactions, general ledgers, and settlement files. Created reusable macros that reduced monthly manual data prep by 65% and accelerated reconciliation cycles.
- Applied **Python (SciPy, statsmodels)** for **A/B testing** and **time-series forecasting** to measure impacts of cost restructuring, loan repricing, and hedging strategies, helping stakeholders implement measures that boosted portfolio profitability by 18%.
- Integrated unstructured audit logs and compliance notes from **MongoDB** with structured ERP and Snowflake financial data, creating a unified reporting layer for regulatory risk monitoring, liquidity assessment, and compliance dashboards.
- Applied advanced statistical methods including **chi-square tests, ANOVA, and confidence intervals** to validate expense patterns, detect fraudulent activities, and support SOX/IFRS-compliant reporting across portfolios and regions.
- Managed **Snowflake-based** transformations to centralize key financial indicators like liquidity ratios, ROE, NPA levels, & revenue variances, enabling real-time access for Power BI & faster delivery of strategic insights to CFO dashboards.
- Led **advanced analytics** projects using clustering, regression, and classification models to segment delinquent accounts, predict payment defaults, and identify high-risk customer cohorts, reducing financial losses and improving cash flow visibility.
- Maintained data dictionaries, metadata catalogs, and data quality validation rules in **Collibra** for financial KPIs, ensuring governance, traceability, and readiness for both internal audits and external regulatory inspections.
- Deployed scalable ETL pipelines on **AWS (S3, Lambda, Glue)** to process large-scale transaction, credit bureau, & market data feeds, enhancing pipeline efficiency and reducing latency for downstream AI-driven credit risk monitoring.
- Conducted **JAD sessions** and **stakeholder workshops** to ensure transparency, traceability, and compliance across risk, audit, and financial reporting outputs.
- Gathered **BRD/FRD** from finance, FP&A, and risk teams and translated business requirements into SQL-driven validation and reconciliation logic aligned with **SOX, Basel III, and IFRS standards**.

EDUCATION

Master of Science in Business Analytics

University of North Texas, Denton, TX

Bachelor of Technology in Computer Science and Engineering

GITAM Institute of Technology, Visakhapatnam India

PROJECTS

Patient Risk Stratification & Care Optimization Platform | Python, SQL, R, Tableau, Power BI, AWS (S3, Lambda), Snowflake, Scikit-learn, dbt, SSIS

- Designed and automated **ETL pipelines** using **SQL, Python, dbt, and SSIS** to integrate patient demographics, treatment history, and lab results into a unified analytics environment for advanced predictive modeling.
- Developed **machine learning models** in **Python (Scikit-learn)** to stratify patients by risk levels for chronic disease management, supporting proactive interventions and lowering readmission rates.
- Built **Tableau and Power BI dashboards** to visualize patient risk distributions, clinical performance KPIs, and cost trends, empowering leadership with data-driven strategies for resource allocation and compliance reporting.

Fraud Detection & Transaction Monitoring System | Python, R, SQL Server, PostgreSQL, Tableau, Power BI, AWS (S3, Lambda), Scikit-learn, dbt, Alteryx

- Automated **ETL workflows** with **SQL, Python, and Alteryx** to consolidate payment transactions, customer profiles, and third-party data feeds, improving fraud monitoring coverage and data quality.
- Built **predictive models** in **Python (Scikit-learn)** using **logistic regression and gradient boosting** to detect suspicious financial transactions, reducing false positives, and improving investigative efficiency.
- Created **Tableau and Power BI dashboards** highlighting anomaly alerts, fraud risk segmentation, and transaction flow trends, enabling compliance teams and executives to take swift preventive actions.
