SUMMARY

Analytics Engineer with 5+ years of experience building automated data infrastructure and ETL/ELT pipelines. Expert at converting unstructured data into audited financial insights using **Python, SQL, dbt, and Snowflake**. Proven track record of reconciling **\$30M+ in revenue** and reducing manual processing time by **90%** through algorithmic auditing and OCR automation.

TECHNICAL SKILLS

- **Languages & Core:** Python (Asyncio, Pandas, NumPy), SQL, Regex, JSON, VBA.
- **Data Engineering:** dbt, Snowflake, ETL/ELT, Data Modeling (Star Schema), API Integration, OCR.
- **Visualization:** Power BI (Power Query/DAX), Tableau, Excel.
- **Tools & DevOps:** Git, GitHub Actions, Docker, Coolify, NetSuite.

PROFESSIONAL EXPERIENCE

StenTam | Phoenix, AZ | **Analytics Engineer** | 2022 – Present

- **Data Architecture:** Architected a **Single Source of Truth (SSOT)** by consolidating data from Zoho, Airtable, NetSuite, and SQL databases. Developed an entity resolution framework to link unique records across disparate platforms.
- **Revenue Recovery:** Led a forensic audit of NetSuite transaction logs using complex SQL; identified and reconciled **\$30M** in unaccounted Accounts Receivable.
- **OCR Pipeline:** Built an end-to-end Python ETL pipeline to ingest unstructured IRS notices. Used **Tesseract and Regex** to extract financial data, reducing processing time from hours to minutes (**90%+ reduction**).
- **Data Migration:** Engineered an asynchronous Python application using the **Microsoft Graph API** to migrate 1,600+ client repositories with 100% data fidelity; implemented concurrency controls to bypass API rate limits.
- **DevOps & Deployment:** Automated deployment of internal web apps and data scripts via **GitHub Actions** and Coolify, implementing CI/CD best practices and version control.
- **Agentic AI:** Programmed AI frameworks for startup partner Revmo to automate stakeholder feedback loops and parse complex financial documentation.

Eurofins TestAmerica | Phoenix, AZ | **Data Analyst II** | 2020 – 2022

- **Data Analysis:** Managed the acquisition and cleaning of high-precision datasets from chromatography instrumentation. Performed root-cause analysis on hardware/software data drift to ensure data integrity.
- **Standardization:** Authored and implemented SOPs for the Analytical Operations department, reducing variability in testing results across teams.
- **Technical Lead:** Served as the primary lead for hardware-software integration, troubleshooting communication errors between chromatography data systems and physical instrumentation.

TECHNICAL PROJECTS

Healthcare Price Transparency (dbt, Snowflake, Python)

- Built a data pipeline to compare hospital Machine-Readable Files (MRFs) for Mayo Clinic and Banner Health.
- Utilized **dbt** for modular modeling and **Snowflake** for data warehousing. Implemented schema tests and **Star Schema** design to optimize analytical queries.

EDUCATION & CERTIFICATIONS

- **Bachelor of Science in Biochemistry** | Arizona State University
- **Certifications:** SnowPro Core (Expected May 2026), AWS Certified Solutions Architect (In Progress), CSM, CSPO.
