EDUCATION

University of Washington (Paul Allen School) – Seattle, WA

Bachelor's in Computer Science, Data Science Option – Graduated: June 2025, GPA: 3.8

Relevant Coursework: Databases, Systems Programming, Data Structures, Algorithms, Machine Learning, Computer Security

TECHNICAL SKILLS

- Languages: Python, SQL, HTML, C++, C, Assembly (x86), Java, JavaScript, R, C#
 - Tools/Libraries: Git/GitHub, CI/CD (GitHub Actions), AI Coding Tools (ChatGPT), PyTest
 - Environment/Platforms: AWS, Unity, RStudio, VS Code, Windows, Linux
 - Concepts: Software Development (designing, coding, debugging), Algorithms & Data Structures, Data Science Specialization (Databases, Machine Learning), OOP, Automated Testing
-

SOFTWARE PROJECTS

Deck-Building Card Game | *Personal Project* | March 2020 – Present

GitHub Repository: github.com/noahmaier17/Card-Venture-Game-Recruiter-Demo

Card Querying Web Application: api.deck-building-card-game.com/cards/view

- Architected over multiple years a 12,000+ LOC card game using Python, Git, and PyTest, containerized with Docker.
- Deployed a Flask-based, serverless RESTful API with AWS Lambda and AWS' API Gateway, providing continuous and streamlined web-based querying of 200+ cards, resulting in a 90%+ reduction in card development time.
- Built a reusable, automated testing framework using PyTest and GitHub Actions, combining a custom-built testing language for card behavior with unit testing for core effect logic, improving reliability and development speed.
- Designed and iterated on approximately 13+ interacting, object-oriented subsystems—including enemy AI, card-zone management, runtime-modifiable card classes, custom data-structure logic, and UI components.
- Used AI tools (ChatGPT) for debugging, CSS styling, and project planning to increase development efficiency.

Minigame Server | *Personal Project* | March 2023 – Present

- Spearheaded collaborative development of a minigame server using Minecraft's scripting and SQL-style language, as well as utilizing its built-in frameworks (physics, networking, input handling), to create 19+ minigames.
- Engineered database operations using Minecraft's statistics tracking, creating several mechanics like customized abilities when using items and player hit detection, designing the core foundation of the project's development.
- Mentored ~3 technical and ~10 non-technical teammates on architecture and debugging, supporting map creation and 8+ collaboratively-developed minigames, broadening development to include open-source-style contributions.
- Employed AI coding tools (ChatGPT) for code generation while maintaining full ownership of implementation.

Post-Season Fantasy Football Backend | *Personal Project* | September 2023 – January 2024

- Developed ETL pipelines using Python and API services to manage custom post-season fantasy football rosters, scrape NFL player data, perform transformations on that data, and publish continuously-available live team scores.
 - Automated an ETL pipeline for post-season drafting by first utilizing a publicly-available API service for player statistics and then sorting all post-season players by regular-season scoring, reducing manual draft time by 4+ hours.
 - Streamlined fantasy football scoring process by replacing a paper-based system with a live, responsive ETL pipeline, saving 3+ hours of week-to-week manual tabulation and improving data accessibility for 10-12 supported users.
-

WORK EXPERIENCE

Assistive Technology for ALS | *Private Caregiver* | November 2021 – Present

- Delivered full-time, high-responsibility, technology-assisted caregiving for a mobility-impaired ALS patient, managing daily technical devices and hygienic practices, using assistive technologies to enhance quality of life.
 - Implemented and customized 2+ assistive devices, including Tobii Dynavox eye-gaze and TTS systems, enabling synthesized voice communication, internet access, and the ability to text family and friends.
 - Tended to basic human needs such as tube feeding, helping with moving limbs, and providing hygienic help.
 - Trained 3 caretakers, including family members, on accessibility tools and device operation.
-

LEADERSHIP EXPERIENCE

Math Club | *Founder, President, Peer Mentor* | September 2021 – Present

- Relaunched an afterschool math program, creating inclusive tutoring for a diverse student body, improving comprehension of math concepts and test scores for dozens of students.
- Guided club strategy, ensuring student community support through collaborative standards and vision.
- Used my strong academic skills (1580 SAT) and interpersonal skills to prepare students for math competitions.
- Sustained leadership through mentorship, assisting with advisor transitions, and operational oversight.
