Career Summary

Data scientist with 10 years of experience applying machine learning and analytics to operational and demand forecasting challenges in travel and software industries. Passionate about applying data science to mission-driven roles that deliver tangible social impact.

Experience

The Parking Spot | Chicago, IL | Senior Business Analyst | April 2018 – August 2025

- Integrated Google Analytics data with in-house reservation and transaction data to determine customer lifecycle and travel patterns, supporting churn reduction and reactivation planning
- Led end-to-end demand forecasting for TPS facilities; translated forecasts into operational decisions for staffing, pricing, and weekly revenue projections.
- Built dashboards with Tableau and Count to visualize booking trends and resource allocation.
- Improved existing reports in Microsoft Report Builder to visualize shuttle wait times by facility
- Developed tool to categorize and summarize customer feedback with LLMs, improving operational decisions
- Joined disparate in-house data sources to ensure accurate car counts and revenue for strategic decision-making
- Performed ad hoc analyses informing facility reopening decisions and online marketing strategies

Uptake | Chicago, IL | Data Scientist | February 2015 – March 2018

- Built supervised machine learning models to predict locomotive breakdowns and reduce down time
- Used unsupervised machine learning algorithms to detect anomalies in wind turbine signal data
- Constructed scripts and queries for data extraction, data science model validation, and general research
- Simulated the effect of Uptake's analytics on operational productivity of railroads and turbine sites
- Designed end-to-end pipeline for data cleaning, feature engineering, model building, and performance evaluation
- Collaborated with subject matter experts to improve model accuracy and operational relevance

iLight Technologies | Chicago, IL | Marketing Research Analyst | May 2014 – February 2015

- Analyzed SpellBrite's Google Analytics, sales, e-mail, and keyword data to optimize paid search campaigns
- Increased awareness of SpellBrite product through web and advertising content

Skills

- Programming languages: R, Python
- Machine learning: trend forecasting (ARIMA, fbprophet), supervised (xgboost, randomForest), feature selection (caret), and unsupervised learning (PCA, k-means clustering)
- Database querying: Microsoft SQL Server, PostgreSQL, Snowflake, Clickhouse, Google BigQuery, dbt
- Data analysis: Microsoft Excel, data.table, pandas, polars
- Natural language processing: tf-idf, sentiment analysis
- Data visualization: ggplot2, dygraphs, R Markdown, Tableau, plotly, Microsoft Report Builder, Hex, Count
- Software development: Version control through git (Github, Bitbucket)
- Miscellaneous: Comfortable in Windows, OS X & Linux (command line tools); proficient in Airflow; fluent in Korean

Education

University of Chicago – Bachelor of Arts in Economics, Minor in Statistics (June 2013)
