SUMMARY:

Data Analyst / BI Analyst with **5+ years** of experience using **SQL, Python, Tableau, Power BI, Excel, AWS, and Snowflake** to deliver analytics, dashboards, and predictive insights across **healthcare, insurance, and fintech**. Known for improving operational efficiency through **claims analytics, data quality improvements, automation, and stakeholder-driven reporting**.

SKILLS:

- **Analytics & Programming:** SQL (MySQL, PostgreSQL), Python, R, SAS, MATLAB, JavaScript
- **BI & Visualization:** Tableau, Power BI, Excel, Looker
- **Data Analytics:** Data cleaning, data mining, data modeling, ad hoc analysis, predictive analytics
- **ML & Python Libraries:** NumPy, Pandas, Matplotlib, SciPy, scikit-learn, TensorFlow, XGBoost
- **Data Platforms:** AWS (EC2, S3, RDS), Snowflake, Azure, GCP; Hadoop, Spark; MongoDB, Oracle
- **Ways of Working:** Jira, Agile methodologies, stakeholder collaboration
- **Healthcare Focus:** Healthcare claims data, patient outcomes analytics, HIPAA compliance reporting

EXPERIENCE:

Business Intelligence Analyst – Elevance Health Inc., New York

Jan 2025 - Present

- Built a **claims operations KPI dashboard** in **Power BI and Tableau** by standardizing metric logic (paid/denied, pending aging, first-pass yield) and automating refresh pipelines; reduced weekly reporting effort from 6 hours to 45 minutes (**-87% time**).
- Wrote optimized **SQL** to reconcile medical/pharmacy claim lines across source tables and fix join logic causing miscounts in denial reasons; improved finance-facing reporting accuracy from 92% to 99% (**+7 pts accuracy**).
- Developed a **readmissions risk model** using **Python (pandas, scikit-learn)** to support care management prioritization and workload planning; increased high-risk member identification precision by 14% (**+14% precision**).
- Implemented **data quality checks** (null thresholds, referential integrity, duplicate detection) for claims and member enrollment extracts in **Snowflake/AWS**; reduced "late-cycle" data defects flagged by downstream teams (**-38% defects**).
- Partnered with clinical, provider, and operations stakeholders to translate reporting needs into definitions and drill-down paths (service line, network, geography); cut requirement rework in sprint cycles (**-25% rework**).
- Produced **HIPAA-aligned** compliance and audit extracts with consistent row-level rules and documented query logic; shortened audit response turnaround from 5 business days to 2 (**-60% turnaround**).

Junior Data Analyst – Elevance Health Inc., New York

Oct 2023 - Dec 2024

- Consolidated member demographics and utilization reporting by creating reusable **SQL** views and parameterized filters for plan, product, and region; reduced repeated ad hoc requests handled by the team (**-30% request volume**).
- Cleaned and validated large claims datasets in **Python and R** (missingness checks, outlier review, cross-field validation) before analytics runs; increased dataset pass-rate in QA reviews (**+18% QA pass-rate**).
- Built recurring operational scorecards in **Excel and Power BI** for call center and claims teams (cycle time, backlog aging, escalations); improved on-time weekly delivery from 70% to 98% (**+28 pts timeliness**).
- Supported fraud and anomaly analysis by engineering features from claim history and provider patterns, then summarizing findings for senior analysts; helped improve investigation hit-rate (**+11% hit-rate**).
- Documented report definitions and refresh steps (metric glossary + change log) so new analysts could maintain reports without tribal knowledge; reduced onboarding time for reporting tasks (**-40% ramp-up time**).

Data Analyst – Accenture, India

Jul 2020 - Dec 2022

- Automated month-end finance reporting by building **Python ETL** pipelines that pulled data from multiple sources and standardized calculation logic; reduced manual consolidation work (**-55% effort**).
- Built an executive **Power BI** dashboard for portfolio KPIs (delinquency, exposure, roll rates) with consistent definitions and drill-downs; decreased metric disputes raised by stakeholders (**-35% escalations**).
- Optimized **SQL** queries used for risk and pricing analysis by refactoring joins and reducing redundant scans; improved reporting throughput from 1 run/day to 5 runs/day (**+4 runs/day**).
- Implemented exception monitoring in **Looker** to track fraud/operations queues and prioritize aging items; shortened average resolution time from 9.0 days to 7.0 days (**-2.0 days**).

EDUCATION:

Clark University, MA

Masters of Science in Computer Science

Jan 2023 - Dec 2024

GPA - 3.90

Jawaharlal Nehru Technological University, India

Bachelors of Technology in Computer Science and Engineering

Aug 2017 - May 2021

GPA - 3.70

Academic Projects:

- Analyzed a dataset of 114,000 Spotify tracks to uncover complex music consumption trends, leveraging advanced data exploration and predictive techniques.
- Conducted the full data analysis process from data cleaning to model development, ensuring accurate insights by employing statistical techniques like k-means clustering and time series forecasting.
- Applied natural language processing (NLP) to predict music consumption trends and analyze song lyrics for sentiment insights.
