

Mohammad Gouse Ali Shaik

Data Analyst

CA | 909-300-5616 | mohammadgouse.s@cvejobs.com | [Linkedin](#)

SUMMARY:

Data Analyst with 4+ years of experience delivering data-driven solutions across healthcare, supply chain, and enterprise analytics environments. Proven expertise in SQL, Python, Spark, Tableau, Power BI, and cloud platforms (AWS) to build scalable ETL pipelines, executive dashboards, and advanced analytics solutions. Hands-on experience developing machine learning models for anomaly detection, fraud identification, and recommendation systems, with a strong focus on data quality, model performance, and operational reliability. Solid background in big data processing (Hadoop, Spark, Databricks), statistical analysis, and stakeholder-focused reporting, with a track record of automating workflows and improving data consistency. Adept at working in Agile environments, translating complex business problems into actionable insights that support operational efficiency and risk mitigation.

SKILLS:

Methodologies: Scrum, Kanban, Risk Management, Stakeholder Management
Languages: Python, R, SQL, SAS
Packages: NumPy, Pandas, Matplotlib, SciPy, Seaborn, Ggplot2
Visualization Tools: Tableau, Power BI, Microsoft Excel, QlikView, Google Analytics
Machine Learning & AI: Generative AI (LLM, RAG), Machine Learning, Deep Learning (Neural Networks), MLOps (CI/CD), NLP Frameworks, TensorFlow, Recommender Systems, Fraud Detection Models
Cloud Platforms: AWS, Google Cloud Platform (GCP), Azure
Big Data Technologies: Hadoop, Hive, Apache Spark, Databricks
ETL Tools: Informatica, Talend, Alteryx
Database: MySQL, SQL Server, MongoDB, Snowflake
Other Skills: Data Cleaning, Data Wrangling, Critical Thinking, Problem-Solving, Communication, Presentation

EDUCATION:

Master of Science in Information Systems California State University - Long Beach	May 2025
Bachelor of Technology in Mechanical Engineering Sri Venkateshwara College of Engineering	June 2022

EXPERIENCE:

Cardinal Health, CA | Nov 2024 – Current | Data Analyst

- Analyzed large-scale healthcare and supply chain datasets using SQL, Python (Pandas, NumPy), and Spark to identify demand variability, operational risks, and revenue leakage patterns.
- Built interactive executive dashboards in Power BI to track inventory turnover, supplier performance, and order fulfillment KPIs, improving leadership visibility and decision speed.
- Automated recurring data pipelines using Python and cloud-based workflows on AWS, reducing manual data preparation effort by 40% and improving reporting reliability.
- Developed machine learning models for anomaly detection and fraud identification using Scikit-learn and TensorFlow, increasing detection accuracy by 25% compared to rule-based methods.
- Implemented data cleaning, validation, and reconciliation frameworks across multi-source datasets (ERP, logistics, sales), reducing data inconsistencies by 30%.
- Collaborated with business, compliance, and engineering stakeholders using Scrum and Kanban methodologies to translate analytical insights into operational and risk-mitigation actions.

Infinite Infolab, India | Aug 2020 - July 2023 | Data Analyst

- Designed and maintained end-to-end ETL workflows using Informatica, Talend, and Alteryx to ingest, transform, and load structured and semi-structured data into SQL Server and Snowflake.
- Performed advanced statistical analysis and predictive modeling using Python, R, SAS, and SciPy to support forecasting, customer segmentation, and risk analysis initiatives.
- Built scalable big-data processing pipelines using Hadoop, Hive, Apache Spark, and Databricks, enabling analysis of datasets exceeding 2+ TB with stable performance.
- Created interactive business intelligence dashboards using Tableau, Power BI, and QlikView, reducing manual reporting cycles by 35% and improving stakeholder self-service analytics.
- Developed and deployed machine learning models for recommender systems and fraud detection, improving model precision by 20% through feature engineering and iterative tuning.
- Applied NLP techniques and early Generative AI concepts for text classification and insight extraction from unstructured data, enhancing analytical depth for client use cases.
- Partnered with cross-functional teams under Agile methodologies to gather requirements, manage risks, and deliver analytics solutions aligned with client business objectives.
