PROFESSIONAL SUMMARY:

- **6 years** of diverse experience in **Data Analysis** specializing in data-driven decision-making and process optimization.
- Expertise in designing and deploying **Power BI** dashboards, transforming complex datasets into actionable insights for executive-level decision-making.
- Skilled in building **enterprise-grade data models** using **Star Schema** and **Snowflake** architectures, enabling efficient querying and robust analytics.
- Proficient in **DAX** (Data Analysis Expressions), **Power Query** for advanced data transformations, KPI tracking, and complex data calculations.
- Hands-on experience in integrating data from **Snowflake**, **SQL Server**, **PostgreSQL**, **Azure Synapse**, and **BigQuery**, ensuring seamless data ingestion and real-time analytics.
- Advanced knowledge in **ETL** processes, data cleansing, and transformation using **SQL**, **Power Query**, and **Python**, enhancing data quality and consistency.
- Extensive use of **Power BI Service**, **Power Automate**, and **Azure Logic Apps** for automating workflows, report scheduling, and data refreshes, reducing manual effort.
- Experience in integrating **Python** and **Azure Machine Learning** for predictive analytics, anomaly detection, and advanced statistical modeling within Power BI.
- Skilled in building **self-service BI environments**, creating data dictionaries, and standardizing reporting structures to promote data democratization across organizations.
- Expertise in **Data Governance**, data lineage, and audit controls, ensuring accurate and compliant reporting in regulated industries.
- Strong collaboration skills, working with **Data Engineers**, **Product Owners**, and **Business Stakeholders** to align analytics solutions with business objectives.
- Experienced in data manipulation through **Python** scripting and familiar with **CI/CD** practices using **Git**, **Docker**, **Jenkins**.
- Exceptional communication and storytelling skills, transforming raw data into compelling narratives for executive presentations.

TECHNICAL SKILLS:

Business Intelligence & Reporting

Power BI, Tableau, SSRS, Looker, Excel, DAX, Power Query, Azure Synapse Analytics

Data Integration & ETL

SQL Server, Snowflake, PostgreSQL, Azure SQL Database, Informatica, SSIS, Power Automate, Data Factory

Data Modeling & Analysis

DAX, Power Query, Python, R, Azure ML, SQL, T-SQL

Cloud Technologies

Azure, Snowflake, AWS (Redshift, S3)

Automation & Alerts

Power Automate, Azure Logic Apps, Power Automate Desktop, SSIS, Python

Collaboration & Integration

Microsoft Teams, SharePoint, Azure DevOps, GitHub, Confluence

Data Security & Compliance

Row-Level Security (RLS), Object-Level Security (OLS), Data Masking, Role-Based Access Control (RBAC)

Project Management & Methodologies

Agile, Jira, Scrum, Kanban

WORK EXPERIENCE:

Devon Bank, Chicago, IL

Jul 2025 – Present

Project: Enterprise Data Warehouse Modernization & Real-Time Analytics Platform

The project involved designing, developing, and optimizing a cloud-based enterprise data warehouse and real-time analytics platform to consolidate data from multiple banking systems. The solution enabled advanced analytics, regulatory reporting, operational dashboards, and near real-time insights using distributed data processing frameworks and cloud-native services across AWS and Azure.

The project focused on data migration, ETL automation, performance optimization, and scalable analytics, ensuring data accuracy, security, and compliance with banking regulations.

Data Analyst

- Developed and maintained **ETL pipelines** using **SQL**, **SSIS**, **AWS Glue**, and **Azure Data Factory**, enabling seamless data integration from multiple sources into centralized data warehouses.
- Automated data transformation and analysis using **Python**, **SQL scripting**, and **Shell scripting**, reducing manual effort by 30%.

- Utilized distributed processing frameworks such as **Kafka**, **Spark**, and **Flink** for large-scale data processing and real-time analytics.
- Leveraged **Snowflake** and **Azure Synapse** for cloud-based data warehousing and analytics, enabling scalable and efficient data processing.
- Built and deployed interactive reports and dashboards using **Power BI**, providing stakeholders with actionable insights.
- Built automated PySpark pipelines to ingest and preprocess raw data (CSV, JSON, APIs) into structured formats, reducing manual effort by **70%**.
- Optimized the performance of queries with modification in **T-SQL queries**, normalized tables, established joins and created indexes wherever necessary.
- Proficient in **Python** programming with libraries such as Pandas and NumPy for data manipulation, analysis, and automation in high-volume data environments.
- Built complex data workflows using DBT and Databricks, utilizing **Python**, PowerShell, and UNIX scripting for data transfer, automation, and scheduling tasks.
- Conducted **data quality checks and validation** using PySpark and SQL to ensure consistency across data pipelines.
- Utilized **GraphQL API** and **REST API** for data integration and application development.
- Applied hands-on knowledge of **AWS** and **Azure** cloud platforms, including **Event Hub** and **AKS**, to optimize data workflows and infrastructure.
- Documented **ETL workflows, data lineage, and transformation logic** to ensure compliance and reproducibility across teams.
- Demonstrated strong communication and problem-solving skills to bridge technical and business needs effectively.

Environment: Python, SQL, Snowflake, T-SQL, AWS Glue, Azure Data Factory, Azure Synapse, Kafka, Spark, Power BI, DAX, Tableau, Agile, Scrum, PySpark, GraphQL API, REST API, Shell scripting.

Jan 2025 – Jun 2025

Project: Cloud Data Warehouse & Enterprise Analytics Modernization (Batch + Streaming)

This project focused on building and modernizing a centralized analytics ecosystem by consolidating data from multiple sources (relational databases, semi-structured sources, APIs, and streaming feeds) into cloud-based warehouses (Snowflake/Azure Synapse/Redshift). The goal was to deliver high-quality curated datasets and interactive Power BI dashboards for stakeholders across operations, sales, and finance.

The team implemented automated data pipelines, validation frameworks (PySpark), data governance controls, and monitoring (CloudWatch), while also enabling near real-time streaming via Kafka and Flink. The project ensured scalable analytics, reduced manual effort, and improved overall dataset reliability.

Data Analyst

- Utilized **Python (NumPy, Pandas)** and **SQL scripting** for data transformation, automation, and advanced analytics, reducing manual effort by 25%.
- Developed and maintained cloud-based data warehousing solutions in **Snowflake** and **Azure Synapse**, enabling scalable analytics and faster query performance.
- Built interactive dashboards and reports using **Power BI**, delivering actionable insights to stakeholders.
- Implemented **data validation checks** (null handling, duplicate removal, schema enforcement) in **PySpark** to ensure **>99% data accuracy** for downstream analytics.
- Experienced with Snowflake for **SQL** development, stored procedures, and data analysis, and proficient in using DBT models for efficient data workflows.
- Loaded data into Amazon Redshift and used AWS CloudWatch to monitor AWS RDS instances, ensuring system health and performance.
- Developed advanced BI reporting capabilities, consolidating requirements, and optimizing data pipelines for efficiency.
- Collaborated in **Agile** environments with cross-functional teams, driving data architecture decisions and business intelligence solutions.
- Performed **exploratory data analysis (EDA)** using PySpark and visualized results with Power BI and matplotlib, enabling data-driven business decision.
- Gained hands-on experience with **Azure Databricks, Apache Spark, Azure Functions, Azure Logic Apps, and Azure Machine Learning** for advanced analytics.
- Utilized **Kafka** and **Flink** for real-time data streaming and distributed processing.
- Supported **Azure DevOps** and **GitHub** for version control and **CI/CD** processes.
- Applied **GraphQL API** and **REST API** for seamless data integration and application development.
- Demonstrated strong communication and problem-solving skills to bridge technical and business needs effectively.

Environment: ADF, SQL Server, Teradata, MongoDB, Azure Databricks, Apache Spark, Python (NumPy, Pandas, SciKit-Learn, PyTorch, spaCy), Snowflake, Power BI, SSRS, GitHub, Kafka, Flink, GraphQL API, REST API, Shell scripting.

Oct 2021 – Dec 2023

Project: Insurance Claims Lifecycle & Fraud Analytics – Power BI Modernization and Automation

The project aimed to replace fragmented manual reporting (primarily Excel-based) with an automated analytics platform using Power BI, DAX, Power Automate, Snowflake, and SQL Server. The solution provided:

- Real-time visibility into the claims pipeline (intake → approval/rejection → settlement)
- Fraud monitoring and alerting with risk segmentation
- KPI dashboards for agent productivity, claim delays, and customer satisfaction
- Secure role-based reporting using Row-Level Security (RLS)
- Centralized report distribution and version control via SharePoint and Azure DevOps

This modernization significantly improved decision-making speed, reduced report turnaround time, and increased data consistency across teams.

Data Analyst

- Developed and deployed over **15 interactive Power BI dashboards** to monitor **claims lifecycle, fraud detection, and customer satisfaction**, providing real-time insights to key stakeholders and reducing manual reporting efforts.
- Built **high-performance data models** in **Power BI Desktop** by integrating **Snowflake, SQL Server, and Excel** datasets, enabling a unified, single-source-of-truth for claims analysis and reporting.
- Automated **real-time fraud alerts** and claims status updates using **Power Automate**, triggering multi-channel notifications (email, Teams, SharePoint), significantly improving response times.
- Optimized data pipelines using **Power Query** for data cleaning, normalization, and integration, improving data quality and reducing ETL processing time.
- Incorporated **Python scripts** for automated data validation, anomaly detection, and outlier analysis, increasing the reliability of fraud scoring models.
- Automated data refresh pipelines using **Power Automate Desktop**, reducing manual intervention and ensuring real-time data availability.
- Reduced report generation time by **70%** through consolidation of fragmented Excel reports into automated Power BI dashboards, improving accuracy and timeliness.
- Authored and optimized complex **SQL** queries to extract, transform, and analyze claims data, supporting risk scoring, agent performance, and claims delay analysis.
- Integrated Power BI and Tableau dashboards with **SharePoint** for centralized report access, version control, and cross-department collaboration via **Azure DevOps**.
- Created standardized **Power BI templates** for faster dashboard development, ensuring consistency across departments and reducing report development time.
- Conducted data profiling and quality assessments using **SQL** and **Power BI** to resolve data discrepancies and improve overall data integrity.

Environment: Power BI, DAX, Snowflake, SQL Server, Power Query, Power Automate, Power Automate Desktop, Python, SQL, Azure DevOps, Excel.

Jan 2019 – Sep 2021

Project: Omni-Channel Retail Performance Analytics & Reporting Modernization

The project delivered a centralized BI and reporting ecosystem that integrated data from enterprise and commerce systems (SAP BW, Oracle, e-commerce platforms) into SQL Server to enable unified performance reporting. The solution included:

- Automated ETL workflows (Informatica + SSIS)
- Analytical models and cubes (SSAS) for drill-down insights
- Standardized dashboards (Power BI, migrated from Tableau where applicable)
- Enterprise reporting via SSRS for recurring audit/compliance and operational summaries

The overall objective was to provide reliable KPI tracking, reduce reporting latency, improve data quality, and enable self-service analysis for business users.

Data Analyst

- Analysed multi-channel retail performance (in-store, online, mobile) using Power BI and Tableau dashboards, delivering actionable insights to drive strategic decisions.
- Developed **ETL workflows** using **Informatica** and **SSIS** to integrate data from **SAP BW, Oracle, and e-commerce** platforms into **SQL Server**.
- Designed and deployed **SSRS** reports for recurring financial summaries, exception logs, and operational KPIs, supporting audit and compliance needs.
- Migrated legacy **Tableau** dashboards to Power BI, reducing licensing costs and enhancing scalability.
- Authored complex **SQL** queries and stored procedures for data extraction, aggregation, and transformation, optimizing data processing times.
- Automated Power BI dataset refresh using **Power Query** and **SSIS** job scheduling, ensuring real-time availability of critical metrics.
- Conducted data quality assessments and root cause analysis for data discrepancies, improving overall data integrity.
- Participated in **Agile** sprints, backlog grooming, and cross-functional collaboration to deliver analytics features aligned with evolving business requirements.

Environment: Power BI, DAX, SQL Server, SSIS, SSAS, SSRS, Informatica, SAP BW, Oracle, Power Query, Agile/Scrum

Education:

- Master's in Information Systems – Northern Illinois University.
- B.Tech in Electronics and Communication Engineering – JNTUH University, India.
