SUMMARY

Business Intelligence Developer with 6+ years of experience delivering data-driven insights across healthcare and enterprise domains. Strong background in BI development, data warehousing, ETL, reporting, analytics, and stakeholder collaboration. Proven expertise in translating business requirements into scalable dashboards, reports, and analytical solutions using SQL, Python, Power BI, Tableau, and cloud data platforms.

SKILLS

Programming & Query Languages: Python, C++, SQL (T-SQL, PL/SQL)

Databases & Data Warehousing: PostgreSQL, MySQL, Oracle, SQL Server, Snowflake, Amazon Redshift, Dimensional Modeling, OLAP, Data Warehousing, Data Wrangling

Business Analysis & Documentation: BRDs, FRDs, SRS, User Stories, Use Cases, UML Diagrams, Prototyping, Gap Analysis, Root Cause Analysis, SWOT Analysis, Business Process Mapping

Cloud & Data Platforms: AWS (S3, Redshift), Microsoft Azure, Exploratory Data Analysis (EDA), Data Governance

Data Analytics & Visualization: Power BI, Tableau, SSRS, SSAS, Advanced Excel, KPI Reporting, Dashboard Development, Data Visualization

ETL & Data Integration: Informatica, Talend, SSIS, Source-to-Target Mapping, Data Validation

Libraries & Statistical Analysis: Pandas, NumPy, Matplotlib, Seaborn

Tools & Methodologies: JIRA, ServiceNow, Visio, Agile, Scrum, Kanban, Waterfall, SDLC

Operating Environments: Linux/Unix, Windows, macOS

EXPERIENCE

Business Intelligence Developer | Cigna Healthcare

| Jul 2025 – Present

- Design and develop enterprise-level BI solutions using Power BI, Tableau, SSRS to support healthcare analytics and executive reporting
- Build and optimize complex SQL queries, views, and stored procedures across Redshift, Snowflake, and SQL Server environments
- Collaborate with business stakeholders to gather requirements and translate BRDs and FRDs into scalable data models and dashboards
- Develop dimensional data models (star and snowflake schemas) to improve reporting performance and analytical accuracy
- Implement ETL workflows using Informatica and SSIS, ensuring data accuracy through validation and reconciliation checks
- Support Agile delivery cycles by participating in sprint planning, backlog grooming, UAT coordination, and production deployments

BI Analyst Intern | CVS Health

| Jan 2025 – May 2025

- Assisted in developing interactive Power BI and Tableau dashboards to track operational KPIs and business performance metrics
- Performed data analysis and validation using SQL and Excel to support reporting accuracy and data consistency
- Assisted data extraction and transformation activities from SQL Server and Redshift for analytical use cases
- Documented business requirements, user stories, and data definitions in collaboration with senior BI developers
- Conducted exploratory data analysis (EDA) using Python libraries such as Pandas and NumPy to identify trends and anomalies
- Participated in Agile ceremonies, including daily stand-ups, sprint reviews, and backlog refinement sessions

BI Analyst | Transol Systems

| Dec 2021 – Dec 2023

- Designed and maintained Power BI, Tableau, and SSRS reports to support operational and management decision-making
- Developed SQL queries and ETL mappings for integrating data from multiple source systems into centralized data warehouses
- Collaborated with business users to gather and document functional requirements, gap analysis, and process flows
- Implemented data validation and reconciliation processes to ensure data quality and reporting accuracy
- Delivered OLAP cubes and SSAS models to improve performance of analytical reporting
- Provided production support, troubleshooting data issues, and optimizing queries for improved performance

Data Analyst | Kranion Technologies

| Aug 2018 – Nov 2021

- Performed data analysis, transformation, and reporting using SQL, Excel, and Python to support business analytics initiatives
- Created dashboards and reports to visualize KPIs, trends, and operational insights for internal stakeholders
- Assisted in building data warehouse structures and dimensional models for reporting and analysis
- Conducted root cause analysis and data quality assessments to identify discrepancies and improve data reliability
- Worked closely with cross-functional teams to document business processes, user requirements, and analytical workflows
- Maintained ongoing enhancements by validating datasets, maintaining documentation, and assisting in UAT activities

EDUCATION

Masters in Business Analytics | East Texas A&M University, TX
