

HANNAH AYAMBA

Richmond, TEXAS 77469 | 2403184059 | ayambahannah4@gmail.com

Professional Summary

Detail-oriented and business-savvy **Analytics Engineer / Data Analyst** with **7+ years of experience** across healthcare, retail, and manufacturing. Specialized in **cloud data platforms (Azure, AWS)**, **data integration**, and **analytics engineering**, building **ELT/ETL pipelines**, **analytics-ready data models**, and **data quality frameworks** using **SQL, Python, and Azure Data Factory**. Proven ability to deliver high-impact **Power BI and Tableau dashboards** that drive strategic decision-making, with experience in **HL7 data integration**, data warehousing, and pipeline optimization. Adept at cross-functional collaboration, aligning analytics to business goals, and delivering actionable insights that improve performance and outcomes.

Skills

- **Methodologies**- Agile Scrum, Waterfall
- **Cloud & Data Platform**- MS SQL Server, SAP ERP, MS Access, Apache Spark, MySQL, Azure Data Factory, AWS S3, Databricks(learning)
- **Tools & Workflow**- Azure DevOps, Informatica PowerCenter, IDQ, JIRA, SSH/MT PuTTY
- **Language & Analysis**- Python, Excel, SQL, Scikit-Learn, Pandas, NumPy
- **Data Visualization**- Power BI, Tableau, Excel, Matplotlib
- **Certifications**- Business Analytics, Big Data Analysis, Scrum Master, Microsoft Azure Data Scientist Associate(In progress)
- **ML & AI**- Azure ML Studio(learning)

Work History

Analytics Engineer

06/2025 to 12/2025

NetSmart Inc – Texas

- Designed and maintained **analytics-ready data models**, transforming raw healthcare and operational data into curated, query-optimized datasets for BI and reporting.
- Built and orchestrated **ELT pipelines** using **Azure Data Factory, SQL, and Python**, ensuring reliable ingestion, transformation, and refreshing analytical datasets.
- Implemented data quality validation checks (null checks, row counts, referential integrity) within transformation workflows to ensure trusted downstream analytics.
- Optimized **SQL transformation logic and stored procedures**, improving query performance and reducing report latency.
- Partnered with data analysts and stakeholders to define **KPIs, metrics, and semantic layers**, enabling consistent and scalable self-service analytics.
- **Configured and deployed SQL Server Integration Services (SSIS) packages using Visual Studio Code**, scheduled and monitored executions via **SQL Server Agent**, and troubleshooted job failures to ensure reliable data processing.
- Maintained **version-controlled analytics codebases** using **Azure DevOps Repos**, supporting peer reviews, controlled deployments, and change tracking.

Data Analyst

11/2023 to 06/2025

Manifest Medex – Texas

- Collaborated with CDPH and SaPHIRE team to resolve HL7 integration issues, ensuring accurate healthcare data delivery across providers.
- Designed and implemented ETL workflows using Azure Data Factory and Informatica PowerCenter to migrate over 10 million records from SQL Server to AWS S3, integrating data quality checks via Informatica IDQ to ensure 99.9% accuracy post-migration.
- Leveraged SSH and PuTTY for remote server access and secure file transfers to Azure Blob Storage.

- Built a small-scale ETL pipeline using Azure Data Factory + Blob Storage + Power BI to automate public health data reporting. Resulted in auto-refresh dashboards and email alerts for critical thresholds.
- Created scalable data pipelines and scheduled triggers in Azure Data Factory to automate monthly ingestion from CRM systems.
- Review all pull requests in Azure DevOps to track change request in the database and upload them to the s3 bucket in the appropriate database directory.
- Designed and optimized MySQL stored procedures, improving processing speed and consistency of reporting datasets.
- Utilized Azure DevOps Repos for version control of database table updates, supporting collaborative reviews, maintaining change history, and ensuring consistency across environments.
- Partnered with the Infrastructure team to automate report scheduling by developing and deploying Python scripts executed as cron jobs within Amazon ECS containers, leveraging container orchestration to enhance workflow automation, improve scalability, and significantly reduce manual intervention.
- Developed internal monitoring dashboards and ETL performance reports to reduce pipeline execution time by 40%

Data Analyst

01/2022 to 10/2023

CVS Health – Texas

- Researched and resolved data discrepancies with troubleshooting teams.
- Supported enterprise-level Online Provider Directory ² by managing data from external partners and conducting root cause analysis on discrepancies.
- Analyzed 837 and 835 healthcare claim data trends to identify variances, significant outliers, and percentile-ranked groups, uncovering opportunities to improve quality assurance investigations.
- Designed Power BI dashboards for risk, utilization, and quality metrics—reducing manual reporting by 60%.
- Investigating data to find patterns and trends to promote business optimization.
- Presented data trends and insights using Excel, Tableau, and PowerPoint.
- Partnered with stakeholders (clinical ops, QA, IT) to define KPIs and optimize report delivery cycles.
- Used SQL Server Agent to update job steps, ensuring new client members were properly included in scheduled data processing tasks.
- Configured and maintained SFTP connections to transmit EHR data feeds securely to external partners, ensuring compliance with data privacy and security standards.
- Provided ad hoc analyses for data scientists and business analysts to support care optimization.

Business Data Analyst

08/2018 to 10/2021

Smiths Detection Inc – Maryland

- Led SAP data governance initiatives to improve accuracy of ERP master data, using Python and SQL for transformation logic.
- Consolidated multiple data sources into centralized Tableau/Power BI dashboards, enabling \$1M+ in logistics cost optimizations.
- Partnered with operations leadership to define and enforce new data standards across 4 departments.
- Developed ad hoc reports and trend analyses that guided strategic supply chain decisions.
- Using SQL server and excel to perform ad-hoc data reporting.
- Cleaned and standardized service operations data, reducing duplicate and incomplete records by 85%.

Education & Certifications

M.S. Data Analytics, University of Maryland Global Campus

Graduate Certificate – Business Analytics, University of Maryland Global Campus

B.A. Social Science (Linguistics), University of Buea

Certifications:

Scrum Master (Scrum Institute) .Big Data Analysis (Cloudera) .Python (IBM)
