

Rasagna Reddy – Data Analyst

Santa Clara, CA | +1 (952) 243-7575 | rasagnareddy19@gmail.com | [LinkedIn](#)

SUMMARY

Data Analyst with 4+ years of experience delivering data-driven insights across global financial services and large-scale product environments. Strong background in SQL- and Python-based analysis, predictive analytics, and experimentation to support product, growth, and business decision-making. Experienced in working with cross-functional teams to translate complex business questions into actionable insights, build reliable data pipelines, and develop executive-ready dashboards. Proven ability to analyze user behavior, identify trends and anomalies, and drive measurable improvements in engagement, retention, and operational efficiency. Adept at balancing analytical rigor with clear data storytelling in fast-paced, collaborative environments.

EXPERIENCE

Data Analyst (AI & Predictive Analytics), Google

Sep 2024 – Present | CA

- Built and productionized predictive analytics models using Python (Pandas, scikit-learn, TensorFlow) and SQL to analyze user behavior, engagement risk, and retention trends across large-scale product datasets, improving model performance by 25% and enabling earlier intervention strategies.
- Designed and maintained automated data pipelines for structured and semi-structured data using distributed processing frameworks (Spark-based workflows) and cloud data warehouses, reducing end-to-end data availability time by 70–80% for analytics and experimentation use cases.
- Developed self-service analytical dashboards and reporting frameworks integrating ML outputs, core product KPIs, and experimentation results, enabling faster decision-making for product, growth, and leadership teams.
- Partnered closely with engineering and data science teams to operationalize models and analytics workflows through containerized deployments and managed ML platforms, ensuring scalability, reproducibility, and high reliability of production pipelines.
- Conducted A/B testing and experiment analysis to evaluate product changes and personalization strategies, applying statistical hypothesis testing to inform roadmap decisions and improve user engagement and conversion metrics.
- Applied NLP techniques to analyze user feedback, support interactions, and text-based signals, identifying key drivers of user dissatisfaction and contributing to measurable improvements in retention and user experience.
- Built predictive monitoring and anomaly detection dashboards using near real-time data streams to surface unusual patterns in user activity and platform behavior, supporting trust, safety, and platform integrity initiatives.
- Implemented data quality and validation checks across analytics datasets, including schema enforcement, anomaly detection, and monitoring, improving data reliability and compliance with internal governance standards.
- Collaborated in Agile/Scrum environments, translating business questions into analytical frameworks, defining success metrics, and delivering insights with high on-time completion and stakeholder alignment.
- Performed user segmentation and clustering using techniques such as K-Means and dimensionality reduction to support targeted experiments and personalized experiences, improving campaign efficiency and relevance.
- Mentored junior analysts on SQL optimization, analytical thinking, and data storytelling, improving reporting consistency and reducing turnaround time for recurring analyses.

Data Analyst, Goldman Sachs

Mar 2020 – Nov 2023 | India

- Delivered data analysis and reporting solutions for internal banking, operations, and risk teams using SQL and Python, supporting day-to-day decision-making across finance and business operations.
- Performed descriptive and diagnostic analysis on customer and portfolio data to identify trends, segments, and performance drivers, supporting client engagement, service optimization, and internal reporting needs.
- Designed and maintained data extraction and transformation workflows to consolidate data from multiple internal systems, improving data availability, consistency, and reporting turnaround time.
- Built and maintained interactive dashboards and recurring reports using Tableau and Power BI to track key business KPIs such as revenue trends, operational efficiency, portfolio performance, and regional metrics.
- Conducted exploratory data analysis (EDA) to identify anomalies, data quality issues, and business patterns, enabling teams to proactively address performance gaps and report discrepancies.
- Automated data validation, reconciliation, and quality checks using SQL queries and Python scripts, reducing manual effort and improving overall data accuracy and reliability.
- Supported forecasting, trend analysis, and variance analysis using historical data to assist management in planning cycles, performance reviews, and quarterly reporting.
- Collaborated with Technology, Risk, Compliance, and Operations teams to gather requirements, clarify data definitions, and translate business questions into structured analytical outputs.
- Assisted in maintaining data governance standards, including documentation of metrics, report definitions, and data lineage, ensuring consistency and compliance with internal controls and regulatory guidelines.
- Prepared executive-ready reports and summaries for senior stakeholders, presenting insights in a clear, concise, and business-friendly manner.
- Contributed to team enablement by supporting junior analysts with SQL query optimization, reporting best practices, and documentation standards, improving team productivity and reporting quality.

SKILLS

- **Programming Languages:** Python, SQL, Bash
- **Data Analysis & Statistics:** Exploratory Data Analysis (EDA), Descriptive & Diagnostic Analytics, Trend & Variance Analysis, Cohort Analysis, Statistical Hypothesis Testing, A/B Testing
- **Machine Learning & Predictive Analytics:** Scikit-learn, TensorFlow, Regression & Classification Models, Clustering (K-Means), Dimensionality Reduction (PCA), Anomaly Detection, Feature Engineering, Model Evaluation
- **NLP & Text Analytics:** Sentiment Analysis, Text Classification, Keyword & Theme Extraction, spaCy
- **Data Engineering & Pipelines:** ETL/ELT Workflows, Apache Spark, PySpark, Airflow, Structured & Semi-Structured Data Processing
- **Cloud & Platforms:** Google Cloud Platform (BigQuery, Managed ML Platforms – exposure), AWS (S3, Lambda – analytics workflows)
- **Visualization & Reporting:** Tableau, Power BI, Matplotlib, Business KPI Dashboards, Data Storytelling
- **Streaming & Monitoring (Analytics Focused):** Kafka, Near Real-Time Data Analysis, Anomaly & Metric Monitoring Dashboards
- **Data Governance & Quality:** Data Quality Checks, Schema Validation, Data Documentation & Lineage, Compliance-Aware Reporting
- **Collaboration & Tools:** Git, Agile/Scrum, Cross-Functional Collaboration, Stakeholder Management, Mentoring Junior Analysts

EDUCATION

Master of Science, Information Technology

Concordia University, St. Paul, MN

Bachelor of Computer Science

Jawaharlal Nehru Technological University, Hyderabad, India
