

Madhava Reddy Gottam

Data Analyst

Lowell, MA | +1 (978) 319 7104 | madhav.100.289@gmail.com

SUMMARY

Data-driven and performance-oriented Data Analyst with 5+ years of proven experience transforming raw datasets into actionable insights that optimize business outcomes, reduce operational costs, and enhance decision-making accuracy. Skilled in Python, SQL, Tableau, and Power BI, with deep expertise in ETL design, data modeling, and automation to streamline reporting efficiency. Demonstrated success in building scalable pipelines across AWS, Azure, and GCP, improving data accessibility and governance. Adept at collaborating with executives to define KPIs and drive performance dashboards supporting business growth and compliance. Strong analytical thinker with advanced skills in statistical modeling, predictive forecasting, and data visualization. Committed to turning analytics into measurable business value that enhances efficiency, profitability, and scalability.

SKILLS

Programming: Python (NumPy, Pandas, SciPy, Seaborn, Matplotlib), SQL, PL/SQL

Visualization: Tableau, Power BI, Excel (Pivot, Power Query, VBA)

ETL Tools: SSIS, SSRS, SSAS, Informatica

Cloud Platforms: AWS (S3, Lambda, Athena), Azure (Data Factory, Synapse), GCP (BigQuery)

Databases: MySQL, PostgreSQL, SQL Server, Oracle

Methodologies: Agile, SDLC, Data Warehousing, Data Governance, Business Intelligence

Analytics: Predictive Modeling, Forecasting, Data Cleansing, KPI Tracking, A/B Testing, Automation

Version Control: Git, GitHub, GitLab

EXPERIENCE

Assurant Insurance

Jan 2024 - Present

Data Analyst

USA

- Automated multi-source data integration pipelines using Python and SSIS, decreasing manual extraction efforts by 48% and ensuring near real-time data synchronization across multiple financial systems.
- Designed Tableau dashboards visualizing risk exposure and profitability metrics, reducing executive review time by 30% and increasing transparency in operational and financial performance tracking processes.
- Implemented Python-based predictive models using regression and clustering, improving forecasting accuracy by 25% and providing valuable insights for risk mitigation and investment decision optimization strategies.
- Orchestrated data migration from legacy servers to Azure Synapse, improving query response speed by 40% and supporting scalable analytics for compliance and regulatory reporting initiatives.
- Conducted SQL-based data validation audits identifying inconsistencies across transaction systems, enhancing data accuracy by 33% and ensuring improved compliance within corporate data governance frameworks.
- Built automated Power BI reports integrated with DAX formulas, enabling continuous KPI monitoring and reducing monthly report generation time from three days to four hours.
- Partnered with cross-functional teams to analyze customer data, uncovering behavioral trends that led to targeted campaigns generating a 14% increase in customer engagement and retention metrics.
- Created ETL error-tracking modules that reduced data pipeline failures by 22% and implemented alerting systems using Python, significantly improving uptime and operational analytics continuity.

Mphasis

Jun 2018 - Jul 2022

Data Analyst

India

- Developed Python-based ETL workflows integrating sales and marketing datasets, cutting reporting latency by 55% and enabling decision-makers to access near real-time metrics for rapid response strategies.
- Constructed 20+ interactive Tableau dashboards visualizing marketing funnel performance, resulting in a 17% increase in campaign optimization efficiency and enhanced understanding of lead conversion pathways.
- Leveraged AWS S3 and GCP BigQuery for cloud analytics, reducing data processing times by 42% while improving accessibility and scalability of high-volume transactional data repositories.
- Engineered SQL data models and complex joins for business intelligence reporting, improving data retrieval efficiency by 38% and enabling consistent, accurate insights across multiple analytic workflows.
- Conducted comprehensive data profiling and cleansing projects, identifying and resolving 28% redundant records that previously distorted KPI reporting, improving organizational data governance accuracy.
- Collaborated with business stakeholders to translate analytical insights into actionable recommendations, driving process automation initiatives that reduced resource overhead costs by approximately 19%.
- Created Power BI executive dashboards integrating DAX measures, enhancing operational reporting capabilities and empowering leadership teams with daily metrics tracking across multiple departments.
- Implemented statistical time-series models using Python's SciPy and Statsmodels libraries, achieving 91% accuracy in predicting quarterly sales performance and improving demand forecasting reliability.

EDUCATION

MS in Information Sciences

Trine University, Michigan, USA

May 2024
