Education

University of Houston Bachelor of Science in Computer Science	Houston, TX • December 2024
TripleTen Data Science & Machine Learning Bootcamp	June 2025 - April 2026

Experience

Code Ninjas Operations & Data Coordination Associate (Part-Time)	Houston, TX Dec 2025 – Present
- Assisted with tracking and organizing student attendance and curriculum progress data using center-level rosters and progress logs. - Maintained structured operational records and supported preparation of basic activity summaries used in routine reporting to the Center Director. - Reviewed student engagement patterns and class flow during sessions and shared observations to support instructional pacing and scheduling discussions. - Collaborated with instructors to support day-to-day center operations in a fast-paced environment, adapting to changing class and staffing needs.	
Huntsman Corporation Data Analyst Intern	The Woodlands, TX, Global Headquarters Oct 2024 - July 2025
- Built analytics solutions leveraging SAP HANA, Azure Databricks, Python, and Power BI, delivering dashboards and reports to support supply chain, procurement, and finance decision-making. - Developed a Power BI dashboard to track vendor plant shutdowns and material impact, improving supply-risk visibility and cross-functional planning. - Analyzed procurement pricing across thousands of materials, surfacing vendor-material combinations with annual unit-price increases above 5 percent and visualizing trends to support cost management and sourcing actions. - Built an invoice anomaly detection model and surfaced flagged exceptions through Power BI, enabling targeted review and strengthening financial controls. - Designed scalable Azure Databricks transformation pipelines to clean, standardize, and model SAP datasets, enabling daily refreshed Power BI reporting. - Developed BOM-based cost analytics and presented cost rollups in Power BI to improve visibility into raw material cost drivers and margin pressure. - Partnered with procurement, finance, and IT stakeholders to translate business questions into analytical deliverables and communicate insights through dashboards and summaries.	
Extern (Webacy Web3) Security Data Analytics Extern	Remote June 2024 – July 2024
- Analyzed and classified 200+ smart contracts, improving dataset accuracy and reliability for risk assessment and visualization in Tableau. - Validated, cleaned, and standardized peer-labeled datasets, achieving 95% data consistency to support dashboards and risk reporting. - Designed and developed Tableau dashboards to track vulnerability frequency and correlation patterns, translating technical findings into executive-level insights. - Applied unsupervised machine learning clustering techniques to group smart contracts by risk profile, reducing manual review effort by 25%.	

Projects

Gold Recovery Process Optimization (Machine Learning Project)	Tools: Python, pandas, scikit-learn, EDA, Regression, Time-Series Features (January2026)
- Analyzed industrial gold recovery data across multiple processing stages to assess metal concentration behavior and data quality. - Validated gold recovery targets using MAE and addressed missing, delayed, and anomalous features to ensure reliable model inputs. - Evaluated feature availability across training and test datasets to prevent data leakage and ensure correct model assessment. - Trained and compared regression models using cross-validation, optimizing performance with a custom sMAPE metric and testing the final model on a holdout dataset.	
GitHub	
Telecom Revenue Analysis: Statistical Data Analysis	Tools: Python, Pandas, NumPy, Matplotlib, SciPy (December 2025)
- Cleaned, transformed, and analyzed multi-table telecom datasets including 500 users, 137K calls, 76K messages, and 104K internet sessions across five relational tables. - Engineered features and built monthly usage and revenue models by customer and plan, including GB conversions, date normalization, and churn indicators. - Designed exploratory data visualizations (histograms, boxplots, bar charts) to compare customer behavior across Surf and Ultimate plans. - Conducted statistical hypothesis testing (Welch's t-test) to evaluate revenue differences across plans and regions. - Delivered data-driven insights identifying the Ultimate plan as more profitable, supporting marketing strategy, pricing decisions, and budget allocation.	
GitHub	
Diabetes Risk Prediction Using Machine Learning	Tools: Python, Scikit-learn, TensorFlow, Keras, Pandas (May 2025)
- Trained ML/DL models on 70K+ BRFSS records to predict diabetes risk using 21 features. - Achieved 88% accuracy and 92% recall with MLP; evaluated using precision/recall/F1. - Built reproducible pipelines in scikit-learn / TensorFlow (preprocessing, splits, scaling). - Tuned hyperparameters with Keras Tuner to reduce overfitting and improve generalization.	
GitHub	

Skills

Programming, Data & Machine Learning: Python, R, Pandas, NumPy, Scikit-learn
Databases, Big Data & Cloud Platforms: SQL, SAP HANA, Azure Databricks, Apache Spark, AWS
Data Visualization, BI & Development Tools: Microsoft Power BI, Tableau, Microsoft Excel, Git, React
