SUMMARY

Data Science graduate student with strong analytical skills and hands-on experience gathering, analyzing, and interpreting large datasets to uncover actionable insights. Proficient in designing data models, generating detailed reports, and identifying patterns that drive business decision-making. Skilled in statistical analysis, data visualization tools (Power BI, Tableau, Excel), and presenting complex findings to both technical and non-technical audiences. Proven ability to collaborate with cross-functional teams and deliver data-driven recommendations. Seeking Data Analyst opportunities to leverage analytical expertise and support strategic business objectives.

SKILLS

Data Analytics: Exploratory data analysis (EDA), statistical analysis, trend analysis, pattern recognition, data interpretation, business intelligence

Data Modeling: Conceptual modeling, logical modeling, entity-relationship diagrams, schema design, data normalization, database optimization

Statistics: Descriptive statistics, inferential statistics, hypothesis testing, A/B testing, regression analysis, correlation analysis

Data Visualization: Power BI, Tableau, Excel (pivot tables, charts, dashboards), Matplotlib, Seaborn

Programming Languages: Python, SQL, R

Data Tools & Libraries: Pandas, NumPy, SciPy, PySpark, Excel, Google Sheets

Database & Cloud: SQL queries, database optimization, AWS S3, AWS EC2

Reporting & Presentation: Dashboard creation, executive reporting, data storytelling, insight presentation

Technical Skills: Data cleaning, data transformation, ETL pipelines, data validation, quality assurance

Soft Skills: Communication, problem-solving, attention to detail, cross-functional collaboration, analytical thinking

EDUCATION

Master of Science in Data Science

Expected May 2027

Regis University, Denver, CO

Relevant Coursework: Data Engineering, Big Data Systems, Statistical Analysis, Cloud Computing, Distributed Systems, Database Systems

Bachelor of Technology in Electronics and Communication Engineering

2020 - 2024

Vignana Bharathi Institute of Technology (Autonomous), Hyderabad, India

DATA ANALYTICS PROJECTS

Event Data Analytics & Interactive Dashboard Development

- Gathered and analyzed 50,000+ event log records from AWS S3, performing comprehensive data cleaning and transformation using Python and PySpark
- Designed logical data models to structure event data relationships, ensuring data integrity and optimized query performance
- Conducted exploratory data analysis (EDA) to uncover critical trends including peak user hours, category-level engagement patterns, and funnel drop-off points
- Utilized statistical methods and SQL queries to validate data quality, identify anomalies, and summarize key user engagement metrics
- Developed interactive Power BI dashboard featuring DAU/WAU metrics, event distribution visualizations, session drop-off analysis, and retention curves

- Generated detailed reports presenting actionable insights to stakeholders, translating complex data patterns into business recommendations
- Documented complete workflow, data transformations, and comprehensive data dictionary for reproducibility and knowledge transfer
- Collaborated with cross-functional teams to refine analytics approach and align insights with business objectives
- Technologies: Python, SQL, PySpark, Power BI, Excel, AWS S3

Price Analytics & Anomaly Detection Dashboard

- Analyzed 100,000+ pricing records, gathering data from multiple sources and performing extensive data cleaning using Pandas and SQL
- Designed data models to organize pricing data by region, category, and time periods for efficient analysis and reporting
- Performed statistical analysis to identify abnormal price spikes, seasonal trends, and category-level pricing patterns using descriptive and inferential statistics
- Applied statistical techniques (Z-score, IQR methods) to detect pricing anomalies and calculated region-wise severity rankings
- Developed SQL queries to compute averages, identify outliers, aggregate trends, and generate summary statistics for executive reporting
- Created comprehensive Tableau and Power BI dashboards with visualizations including hotspot heatmaps, anomaly trend charts, and severity score indicators
- Generated detailed reports highlighting high-risk regions, repeated pricing violations, and actionable recommendations for pricing strategy
- Presented analysis results to both technical and non-technical audiences, effectively communicating complex statistical findings
- Collaborated with stakeholders to understand business requirements and refine analytical approach
- Technologies: Python, Pandas, SQL, Tableau, Power BI, Excel

Metabolomics Data Analysis & Pattern Recognition

- Gathered and interpreted large mass spectrometry datasets (10,000+ samples), performing data cleaning, normalization, and quality validation
- Designed analytical data models to structure complex scientific data for efficient querying and analysis
- Conducted comprehensive statistical analysis using clustering algorithms to identify compound similarity patterns and chemical groupings
- Utilized advanced analytics techniques including correlation analysis, pattern recognition, and trend identification
- Created data visualizations using Python libraries (Matplotlib, Seaborn) to present chemical space patterns and cluster relationships
- Generated detailed analytical reports documenting methodology, findings, and actionable insights for research stakeholders
- Demonstrated strong attention to detail in data validation, ensuring accuracy and reliability of analytical results
- Technologies: Python, Pandas, NumPy, SciPy, Matplotlib, Seaborn

ACADEMIC EXPERIENCE

Student Analyst - Data Science & Analytics

2025 - Present

Regis University

- Performed data analytics on academic datasets, gathering insights to support coursework projects and research initiatives
- Designed and implemented data models for database assignments, ensuring proper normalization and optimization
- Created SQL queries and analytical reports to extract, transform, and analyze large datasets
- Developed data visualizations and dashboards to present analysis findings to professors and peer groups
- Collaborated with classmates on cross-functional team projects, demonstrating strong communication and problem-

solving skills
