Summary

Junior Data Engineer with experience building and optimizing analytics pipelines using Python and Snowflake. Successfully migrated a BI reporting stack to Omni Analytics, rebuilding 20+ dashboards and reducing support requests by 40%. Proven ability to translate business needs into reliable data solutions and empower users through documentation and training. Seeking to contribute data engineering expertise to enhance data access and drive actionable insights.

Education

San Jose State University

Aug 2023 - May 2025

Bachelor of Science, Data Science

San Jose, California

- **Coursework:** Data Structures and Algorithms, Data Visualization, Database Management Systems, Processing Big Data, Statistical Programming with R, Advanced Python Programming, Object Oriented Programming

Skills

- **Programming:** Python, SQL, R, Java
- **Data Platforms & Engineering:** Snowflake, MySQL, DBT, ETL/ELT, Git, JIRA, Cloud Platforms
- **Analysis & Visualization:** Pandas, NumPy, Dask, Tableau, Omni Analytics, Power BI, Matplotlib, Plotly, Scikit-learn, Statistical Analysis, EDA, Relational Data Modeling
- **Professional Skills:** Cross-functional Collaboration, Technical Communication, Data Translation, User Training & Documentation, Analytical Problem-Solving, Agile Project Management

Work Experience

Marigold Health | Data Engineer

Jul 2025 - Dec 2025

- Developed and optimized end-to-end analytics data pipelines using Python and Snowflake, enabling reliable data access and reporting for 5-10 cross-functional stakeholders.
- Collaborated with data consumers and engineering teams, using JIRA and SQL, to clarify evolving business requirements, refine analytics data models, and align metric definitions with operational goals, which improved data consistency and accelerated model alignment across the organization
- Migrated the BI reporting stack to Omni Analytics, rebuilding 20+ production dashboards while preserving critical KPIs for leadership and downstream decision-making.
- Conducted ongoing analysis of large-scale datasets with Python and Tableau, uncovering key trends that informed sales strategies and operational planning, leading to improved quarterly sales performance and greater operational efficiency
- Strengthened data quality and governance by creating clear documentation and training 20+ users on self-service analytics tools, reducing data-related support requests by 30–40%.

Spartan Analytics | Volunteer Leader

Aug 2024 - Dec 2024

- Led hands-on analytics workshops, improving proficiency in SQL, Python, and R.
- Delivered 5+ applied projects for local businesses, translating real-world problems into data-driven solutions.

Projects

California Forest Fire Prediction

Jan 2025 - Present

- Built a scalable ETL pipeline integrating 6 environmental datasets (100K+ records) using Python (Pandas, Dask), resolving 15K+ missing values to ensure model-ready data.
- Engineered 5+ predictive features (e.g., lagged climate variables) and applied dimensional data modeling to support analytical and machine-learning scalability.
- Performed exploratory analysis on 20 years of wildfire data, producing 10+ visualizations to support regional risk assessment and data-driven planning.
- Documented data preparation steps, assumptions, and dependencies to support reproducibility and future enhancements.

Social Media Sentiment Analysis

Jan 2025 - Feb 2025

- Executed SQL-based sentiment analysis on 10K+ social media posts, generating insights that improved engagement strategies by 25%.
- Optimized ETL workflows to analyze performance metrics, revealing that video content drove 40% higher engagement.
- Synthesized analytical findings into concise narratives and presented recommendations to stakeholders, directly influencing changes in influencer partnership strategy.
