Professional Summary

Data Analyst with 3+ years of experience using SQL, Python, Power BI, Tableau, and Excel to solve business problems. Strong background in data cleaning, ETL workflows, dashboard development, and statistical analysis. Adept at transforming complex data into actionable insights and automating reporting to drive efficient, data-informed decisions.

Education

University of North Texas

Master of Science, Information Science

- GPA: 3.916

Aug 2023 - May 2025

Denton, TX

Technical Skills

- **Languages & Tools:** SQL, Python, Pandas, NumPy, Matplotlib, Seaborn, Excel, Pivot Tables, Macros, Power BI, DAX, Tableau, java, JavaScript, Vue.js
- **Data Engineering & Databases:** MySQL, PostgreSQL, SQL Server, ETL Pipelines, Data Modeling
- **Cloud & Automation:** AWS, S3, EC2, Docker, API Integration, Workflow Automation, UX Design
- **Analytics:** KPI Development, Forecasting, Statistical Analysis, Trend Analysis, Reporting Automation
- **Tools:** JIRA, Confluence, Git, Agile

Experience

Vosyn Inc.

Data Analyst

Jan 2025 - Present

- Designed and deployed advanced Power BI dashboards visualizing KPIs for AI research programs, increasing reporting visibility by 40% and enabling faster data-driven decisions across teams.
- Built Python-based data validation and reconciliation frameworks that improved data accuracy by 30% and reduced manual verification time by 25%, ensuring dependable analytics for research workflows.
- Conducted in-depth EDA using Python and SQL to uncover trends, anomalies, and performance drivers, generating insights that enhanced product planning efficiency by 20% and guided strategic roadmap updates.
- Integrated API-driven streams into ETL pipelines, increasing ingestion stability by 35% while improving documentation and governance, reducing analyst onboarding time by 15%.

Wipro Technologies

Data Analyst

Aug 2022 - Jul 2023

- Processed, transformed, and analyzed large-scale datasets using SQL and Python, generating insights that improved operational efficiency by 20% and supported better decision-making across supply-chain and e-commerce clients.
- Built scalable, intuitive Power BI dashboards that monitored high-impact KPIs, helping teams detect issues 30% faster and optimize daily operations through timely analytics.
- Automated recurring reporting tasks with Python and Excel, saving 6+ hrs/week and improving reporting consistency by 25% across multiple business units by eliminating manual steps and standardizing workflows.
- Enhanced SQL queries and ETL processes to reduce refresh times by 35% and improve the overall reliability of automated data pipelines supporting daily reporting, resulting in faster data availability and fewer processing failures.

Data Analyst Intern

Sep 2021 - Jul 2022

- Cleaned and validated 300+ daily datasets with a 99% accuracy rate, ensuring consistently high-quality inputs for business reporting, analytical models, and downstream operational workflows used by multiple teams.
- Built Excel KPI dashboards and standardised reporting templates that improved insight delivery and strengthened leadership visibility by 15%, enabling clearer performance tracking and more reliable decision-support across departments.
- Automated redundant data-cleaning tasks using Python, cutting manual effort by 20% and significantly improving overall data reliability during ingestion, resulting in smoother reporting cycles and fewer recurring data issues.

Cisco Systems

Data Analyst Intern

Mar 2021 - Aug 2021

- Analysed large-scale network performance logs (10K+ daily records) to identify recurring patterns, anomalies, and inefficiencies, contributing to a 15% improvement in network optimisation initiatives and enabling more proactive issue resolution.
- Applied statistical methods to evaluate false-positive security alerts, reducing alert noise by 10% and improving classification accuracy across monitoring systems, resulting in clearer prioritisation for security teams.
- Documented workflows, validation steps, and audit procedures that increased compliance efficiency by 20% and strengthened long-term data quality assurance, ensuring greater transparency and consistency across operational processes.

Projects

Flu Vaccination Access Analysis - Healthcare Analytics

- Cleaned and analysed large CDC vaccination datasets (200K+ records) to identify disparities in access, distribution efficiency, and population coverage, revealing trends that guided targeted intervention strategies.
- Built Tableau dashboards visualising demographic and geographic gaps, improving stakeholder understanding of emerging patterns and supporting public health decision-making.

5K Run Budget Optimisation - Financial Analytics

- Built forecasting models and Excel dashboards to optimise cost planning, lowering budget variance by 18% and improving financial predictability.
- Performed variance and sensitivity analysis to identify major cost drivers, improving the accuracy of future planning by 15%.
