SUMMARY

Software Engineer with 2+ years of experience building full-stack applications, automating accessibility workflows, and delivering data-driven solutions across government and enterprise environments. Known for improving system reliability, increasing test coverage, and creating scalable dashboards and automations that enhance decision-making. Skilled in Java, TypeScript, React, Next.js, Power BI, and accessibility standards (WCAG 2.2, Section 508).

EDUCATION & CERTIFICATIONS

- SWE Certificate – Code Differently, 2025
- Certified ScrumMaster – Scrum Alliance, 2024
- Responsive Web Design – FreeCodeCamp, 2024
- Digital Literacy – Certiport IC3, 2023

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript

Frameworks: React, Next.js, Spring Boot, Django, Node.js

Tools: AWS, MongoDB, GitHub, Power BI, SharePoint, Power Automate

Standards & Practices: Accessibility (WCAG 2.2, Section 508), Agile/Scrum, Testing, UI/UX

Soft Skills: Critical Thinking, Problem Solving, Cross-functional Collaboration

EXPERIENCE

Digital Accessibility Apprentice — Delaware DTI (Sept 2025 – Present)

- Designed and standardized a statewide storage system for Level Access scan reports, improving retrieval speed and reducing data inconsistencies across 35+ agency folders.
- Built a centralized Remediation Tracker that provides agency-level visibility into accessibility progress and compliance trends.
- Created Power BI prototypes visualizing score trajectories, high-risk violations, and agency readiness for quarterly reporting.
- Automated notifications and threshold alerts using Power Automate, reducing manual monitoring time by 40%.
- Performed manual WCAG 2.2 audits and PDF remediation efforts, directly contributing to improved accessibility scores for partner agencies.

Community Health Intern — ChristianaCare (July 2025 – Nov 2025)

- Replaced and repaired devices across high-traffic clinical departments, reducing downtime and improving workstation reliability.
- Assisted IT deployments by configuring new hardware and ensuring successful rollouts with minimal disruption.
- Diagnosed system failures and supported end-user troubleshooting, improving resolution efficiency.

Full-Stack Developer — ARplans (March 2025 – April 2025)

- Developed the full ARplans platform using Next.js, Node.js, and MongoDB, enabling the company's first production-ready product within 3 months.
- Implemented secure multi-role authentication using Clerk, reducing unauthorized access risks and improving onboarding flow.

Software Developer — GreenSol (Sept 2024 – Nov 2024)

- Refactored backend API from JavaScript to TypeScript, decreasing runtime errors and improving type safety.
- Increased automated test coverage from 20% to 90%, significantly reducing regressions and accelerating deployment cycles.
- Reduced technical debt and optimized API performance, supporting higher request throughput.

Jr Software Developer — JPMorgan Chase (June 2024 – Aug 2024)

- Built components for a Buy Now, Pay Later feature serving 50M+ online credit card customers, projected to increase engagement by 27%.
- Developed an internal API integrating two legacy systems with zero downtime, enabling new user capabilities.

Jr Software Developer — JPMorgan Chase (June 2023 – Aug 2023)

- Developed a Java + Kubernetes validation tool improving payment batch accuracy and reducing manual verification.
- Migrated Python batch scripts to Java, decreasing processing latency and improving developer workflow efficiency.

PROJECTS

- Code Differently Repository — Portfolio of Java and TypeScript engineering projects showcasing algorithms, clean architecture, and problem-solving.
- Vibe Together API — Modular REST API built using Python and Django with a focus on scalability and clarity.
