 510-557-2675

Education

California State University-Sacramento

Graduated December 2025

Bachelor of Science in Computer Engineering

GPA: 3.2

Technical Skills

AI / Deep Learning: Deep Learning (PyTorch), Neural Networks, Multi-modal Embedding Learning
Languages: JavaScript, TypeScript, Python, C, Java, Assembly (x86/ARM)
Web Development: React, Next.js, Node.js
Database: MongoDB, SQL, PostgreSQL, MySQL
Cloud / Deployment: Vercel, Render, Microsoft Azure
Developer Tools: Git, GitHub, Bitbucket, Docker, VS Code
Certificates: Model Validation 2 – Expert (Handshake); LPI Linux Essentials (Linux Professional Institute)

Experience

Y STEM and Chess Inc.

November 2025 - Present

Full Stack Software Engineer

Boise, Idaho (Remote)

- Develop and optimize full-stack features using React, Express, and MongoDB for K–12 online learning platforms.
- Build interactive chess-learning features used by K–12 students, improving engagement and lesson completion.
- Provision and manage virtual machines in Microsoft Azure to support the platform's backend systems.
- Lead a development team by assigning tasks, reviewing pull requests, and delivering features on time.

ReplyQuickAI LLC

July 2025 - November 2025

Software Engineer Intern

Sarasota, Florida (Remote)

- Designed and developed full-stack Next.js/Node.js features with API integrations (OpenAI, RetellAI, BlendAI, etc.).
- Deployed new features and managed the end-to-end deployment process to ensure stable, reliable releases.
- Oversaw and maintained the main branch on GitHub, keeping it deployable and connected to production.
- Led and collaborated with cross-functional teams to delegate tasks, debug complex edge cases, and deliver sprint on time.

Handshake AI

November 2025 - Present

AI Trainer - Model Validation Expert

San Francisco, California (Remote)

- Develop and evaluate domain-specific prompts to assess the performance of LLMs in model validation.
- Analyze LLM outputs for accuracy, clarity, and depth across model validation tasks.
- Conduct independent research to support prompt development and evaluation tasks.
- Contribute to improving AI understanding of complex model behavior through expert review and feedback.

U.S. Government–Sponsored Project (DMEA)

Barcode Extraction Software Application (Senior Project) | Python, GitHub

January 2025 - December 2025

- Sponsored by the Defense Microelectronics Activity (DMEA) under the U.S. Department of Defense.
- Engineered a barcode recognition system to extract, filter, and transmit targeted data from multiple barcode formats.
- Reduced processing time from 30–45 seconds to 1–2 seconds per barcode, eliminating errors and boosting accuracy.
- Worked with DMEA Engineers to align on requirements and held periodic meetings to ensure project goals were met.

Projects

AI-Powered Multi-Modal Text-Image Alignment System | Python, PyTorch, GitHub

March 2025 - April 2025

- Built a custom multi-modal deep learning model in PyTorch for image-text similarity on MNIST data.
- Achieved over 95% image-text alignment accuracy through joint embedding learning.
- Reduced validation loss by 80% over 5 training epochs via model and hyperparameter tuning.

IOU Banking App | Java, MySQL, GitHub

August 2024 - December 2024

- Engineered a banking app that modernizes IOU tracking, reducing payment delays by 60%, improving accountability.
- Automated reminders eliminated forgotten payments and notably increased on-time payments.
- In a group of three, followed Agile methodology using the Scrum to divide work into sprints for iterative development.

Embedded Vision-Based Sorting System | C, STM32 Microcontroller, GitHub

August 2024 - December 2024

- Engineered to sort objects by color to reduce labor costs and errors, with scalability for warehousing and logistics.
- Achieved reliable object detection and automation with accuracy above 90% in color-based sorting.
- Ideal for identifying and separating resistors, wires, and plastic parts by color in manufacturing and assembly lines.
