Summary

Data Analyst with 3.5+ years of experience in data engineering, analytics, and process automation across healthcare and financial domains. Proficient in Python, SQL, and SAS, with hands-on experience in ETL design, data quality control, and business intelligence reporting. Adept at transforming raw, complex data into actionable insights that improve accuracy, operational efficiency, and decision-making. Experienced in data modeling, predictive analytics, and collaborating across technical and business teams.

Professional Experience

UNJSPF | Data Analyst (Contract)| Remote

July 2025 - Present

- Engineered and validated ETL processes using Python and SQL to migrate financial data from legacy systems (S&P Market EDM).
- Automated data QA scripts and error-tracking workflows, enhancing data reliability by 30%.
- Designed Power BI dashboards integrating multiple SQL data sources to visualize investment and operational KPIs.
- Partnered with finance and IT teams to refine requirements, ensure reporting accuracy, and streamline production workflows.
- Conducted regression and user acceptance testing (UAT) to verify alignment with business rules and system logic.

Xpertdox | Data Analyst | Phoenix, AZ

March 2025 – June 2025

- Automated claims data pipelines using Python and SAS, reducing manual intervention by 50%.
- Processed structured and unstructured data from cloud repositories using pandas and NLP text parsing techniques.
- Developed Power BI dashboards for claims utilization, physician efficiency, and trend analysis, improving insight delivery speed.
- Collaborated with stakeholders to optimize reporting and data refresh cycles, improving turnaround by 25%.

IQVIA | Statistical Programmer | Montreal, QC, Canada

May 2022 – November 2024

- Designed and validated clinical trial datasets (SDTM and ADaM) using SAS Base, PROC SQL, and custom macros.
- Automated data transformation routines, ensuring compliance with CDISC and FDA submission standards.
- Developed submission-ready tables, listings, and figures (TLFs) for oncology and women's health studies.
- Implemented data verification macros that reduced QC errors by 20%, improving deliverable turnaround times.
- Collaborated with global biostatistics and data management teams to resolve data anomalies and maintain integrity.

Projects

Predictive Hospital Readmission Model (MIT Capstone)

- Built a predictive model using Python (pandas, scikit-learn) achieving 85% accuracy in forecasting patient readmission risks.
- Applied feature engineering, cross-validation, and model tuning (GridSearchCV) to optimize performance metrics.
- Communicated insights through visual dashboards and statistical summaries for actionable healthcare strategies.

Amazon Review Sentiment Analysis

- Developed an NLP pipeline using Python (NLTK, scikit-learn) to classify sentiment on 50K+ Amazon reviews.
- Implemented TF-IDF vectorization and logistic regression, achieving 90% precision in model predictions.
- Designed a performance evaluation framework using accuracy, recall, and confusion matrices to measure model effectiveness.

Skills

Programming & Tools: Python (pandas, PySpark, scikit-learn, NumPy, matplotlib), SQL, SAS, Git, Bitbucket, VS Code

Data Platforms: Snowflake (learning), AWS (in progress), SQL Databases (Oracle, Teradata)

Analytics & Modeling: ETL Development, Data Cleansing, Data Validation, Predictive Analytics, Dimensional Modeling

Visualization: Power BI, Tableau, Excel

Collaboration Tools: SharePoint, Microsoft Teams, ServiceNow

Education

Bachelors of Science in Biology, Thompson Rivers University, Kamloops, BC

Graduated - December 2021

Master of Science in Computer Analytics (OMCSA), Georgia Institute of Technology | Online

January 2026 - December 2027

Certifications

Base SAS Certification – SAS Institute

MIT Data Science Certified – MIT
