Energetic Software Engineer with a proven ability to build scalable, user-centric web applications. I combine deep expertise in React, Node.js, and AWS with a practical focus on performance optimization and code quality. Passionate about solving hard engineering problems, whether it's modernizing legacy architectures or architecting real-time, event-driven systems that drive measurable business value.

TECHNICAL SKILLS

Certifications: AWS Certified Developer - Associate

Languages: JavaScript (ES6+), TypeScript, Python, Java, SQL (PostgreSQL), HTML5, CSS3

Frontend: React.js, Next.js (App Router), Tailwind CSS, Redux Toolkit, Framer Motion

Backend: Node.js, Express, RESTful APIs, Microservices, Redis, Stripe Webhooks

Cloud/DevOps: AWS (S3, EC2, Lambda), Docker, CI/CD (GitHub Actions), Vercel

EXPERIENCE

One Community Global

Remote

Software Engineer

July 2025 – Present

- Migrated legacy **JavaScript** components to strictly typed **TypeScript** within the **React** codebase, simultaneously implementing pixel-perfect **Figma** designs to modernize the application interface.
- Optimized **MongoDB** performance by engineering complex aggregation pipelines and compound indexes, ensuring sub-second data retrieval for heavy analytics dashboards handling large datasets.
- Developed scalable **Node.js** and **Express** endpoints, implementing a **Redis** caching layer that successfully reduced API latency by 40% under high concurrent traffic loads.
- Achieved 85% test coverage by writing rigorous **Jest** suites for core modules, enabling the team to safely refactor legacy code and eliminating critical regression defects in production releases.

Indiana University Bloomington

Bloomington, IN

Software Engineer

Jan 2024 – July 2025

- Implemented dynamic UI features for the student management dashboard using **Next.js** and **React**, utilizing Server-Side Rendering (SSR) to improve page load speeds by 35% for internal staff.
- Engineered backend services in **Python** to validate 50,000+ records and optimized **PostgreSQL** execution plans, reducing report generation time from minutes to under 5 seconds.
- Containerized application services using **Docker** and managed deployments on **AWS**, reducing environment setup time by 50% for the team and ensuring consistent production releases.

Persistent Systems

Hyderabad, India

Software Engineer Intern

June 2022 – May 2023

- Developed backend REST APIs using **Node.js** for a high-volume transactional booking system, optimizing complex **SQL** queries to reduce payment processing latency by 15%.
- Implemented secure **JWT** authentication flows across the **React** frontend and **Node.js** backend, enforcing Role-Based Access Control (**RBAC**) to secure user data.
- Collaborated with senior engineers to diagnose and resolve over 30 critical production bugs, writing unit tests that improved overall system stability and reduced client-reported issues.

PROJECTS

AI-Powered Email Template Generator | *Next.js, Google Gemini, Convex, HTML5 DnD*

- Secured **Runner Up** at the **Google x ServiceNow Hackathon** by engineering a dependency-free drag-and-drop email builder using the **HTML5 DnD API** and recursive algorithms to support nested layouts.
- Built a deterministic generative pipeline using **Google Gemini** to output strict **JSON** schemas for email structures, leveraging **Convex** for real-time state synchronization to render editable, send-ready templates.

EDUCATION

Indiana University Bloomington

Bloomington, IN

Master of Science in Computer Science; GPA: 3.7/4.0

May 2025
