SUMMARY

Frontend Developer with over 4 years of experience building scalable, high-performance enterprise web applications using Angular (v12+), TypeScript, and modern JavaScript. Expert in developing responsive Single Page Applications (SPAs) with RxJS, NgRx, and modular architecture. Proven track record of improving application performance by 25–35%, modernizing legacy UI systems, and delivering accessible, user-centric interfaces compliant with WCAG 2.1. Strong collaborator in Agile environments with a sharp focus on UI quality, usability, and maintainability.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Java (8+), Python, SQL, C++, C#

Frontend: Angular (v2–17), React, RxJS, NgRx, HTML5, CSS3, SCSS, Bootstrap, Responsive Design, Accessibility (WCAG 2.1)

API & Integration: REST API Integration, JWT-based UI handling, Error Handling, Client-side Caching

Databases: MySQL, PostgreSQL, SQL Server, MongoDB

Testing: Jasmine, Karma, Jest, Cypress,

Tools & Workflow: Git, GitHub, Bitbucket, Jira, VS Code, Figma, IntelliJ IDEA, Agile/Scrum

Frontend Architecture & Patterns: Lazy Loading, AOT Compilation, OnPush Change Detection, Role-Based UI Access, Component-Driven Architecture, State Management

PROFESSIONAL EXPERIENCE

Senior Software Engineer

08-2025 – Present

The Walt Disney Company

Texas (Remote)

- Developed Angular SPAs for Disneyland and Disneyworld pass sales platform supporting 2M+ daily transactions during peak seasons.
- Implemented NgRx state management and optimized RxJS streams, improving page load times by 35%
- Built reusable UI component library for Angular and React applications, standardizing design patterns and reducing feature integration time by 25% across 5 development teams
- Optimized SQL Server queries and stored procedures, improving database performance by 25% and reducing transaction response times from 800ms to 600ms for high-traffic checkout flows
- Addressed 40+ accessibility issues across the platform, achieving full WCAG 2.1 AA compliance and enhancing usability for customers with disabilities
- Collaborated closely with UX designers, product owners, and QA to translate designs into polished, user-friendly interfaces
- Mentored 3 junior developers on Angular best practices, reactive programming patterns, and debugging techniques

Software Engineer (Web & Mobile Platform)

07/2025 – 08/2025

Athleticulture LLC (Startup)

Arizona (Onsite)

- Built responsive web interfaces using React and modern JavaScript, focusing on clean component architecture
- Integrated REST APIs and implemented secure client-side authentication flows
- Developed community and content-sharing modules with efficient state management and smooth API-driven interactions, supporting 50+ beta users. Implemented subscription-based access control workflows to support premium content monetization features

Full-Stack Research Software Engineer

09-2024 – 06-2025

University of Arizona

Arizona (Onsite)

- Developed full-stack research application from ground up using Angular, implementing JWT authentication, and integrated RESTful APIs.
- Built reusable Angular components and optimized SPA performance using Lazy Loading and OnPush change detection, improving initial load times by 35%
- Implemented CI/CD workflows with GitHub Actions and Docker, automating testing and deployment processes
- Led collaboration with research team on feature design, responsive layouts, and cross-browser compatibility.

Mentor - AI HDL International Semiconductor Design Competition

09-2024 – 01-2025

University of Arizona

Arizona (Onsite)

- Guided participants in AI-driven semiconductor design, applying AI/ML techniques to real-world hardware challenges.
- Analysed 10,000+ competition datapoints using Python (Pandas, NumPy), uncovering trends that helped teams refine AI models and improve performance scores by 15%.

Full Stack Developer

01-2023 - 07-2024

Morgan Stanley

Bangalore (Onsite)

- Developed enterprise-grade dashboards, request workflows, global search, and approval systems using Angular, React, RxJS, and NgRx for 10,000+ users
- Built frontend using Angular, React, RxJS, and NgRx, enabling real-time user interactions and role-based data access control
- Led migration of critical modules from legacy AngularJS to Angular 14, reducing technical debt by 50% and improving application performance by 35% through modern framework optimizations
- Optimized MyRequest and BulkRequest screens by implementing response caching and API batching strategies, reducing redundant API calls by 40% and improving response times by 30%

- Designed Spring Boot microservices with REST APIs and Spring Security, implementing feature toggles that allowed seamless switching between legacy and new features, minimizing release risk
- Collaborated with cross-functional teams including UX, QA, Infrastructure, and Product Owners to refine requirements, conduct code reviews, and drive features through full release cycle

Full Stack Developer

07/2021 – 12/2022

The Hartford

Bangalore (Onsite)

- Developed Employee Renovation health insurance platform features including coverage selection, dynamic forms, multi-step dashboards, and payment workflows using Angular with Spring Boot and MySQL
- Built reporting and analytics modules using React frontend with SQL Server backend to track policy enrollments, claims processing, and customer trends, enabling data-driven business decisions
- Improved form validation performance by 25% through RxJS debouncing, reactive programming patterns, and Angular Reactive Forms, reducing unnecessary API calls and server load
- Achieved 85%+ code coverage using Jasmine and Karma with unit and integration tests, ensuring stable production releases
- Implemented CI/CD pipelines on AWS using Jenkins, enabling automated testing, deployments, and monitoring for high-traffic periods with 50K+ daily active users.

EDUCATION

Master of Science in Information Science

01/2024 - 05/2025

University of Arizona

Arizona

Bachelor of Technology in Computer Science

06/2017 – 07/ 2021

Jawaharlal Nehru Technological University

Andhra Pradesh

PROJECTS

Capstone - LiveBreak: The Hyperlocal Information Hub

Developed [LiveBreak](#), an AI-powered hyperlocal news platform built with Angular, Spring Boot, and PostgreSQL to address misinformation and accessibility gaps in local news. Implemented collaborative filtering and Retrieval-Augmented Generation (RAG) for personalized news recommendations and AI-based trust scoring. Integrated OCR-driven news extraction using Tesseract.

Real-Time Seat Booking System

Developed scalable seat booking platform using Angular with WebSocket integration for real-time availability updates across 500+ concurrent users. Implemented optimistic locking and conflict-resolution logic to prevent double-booking in high-traffic scenarios. Built reactive UI with RxJS observables achieving sub-second update latency and smooth user experience. Designed modular architecture with lazy-loaded feature modules for improved performance and maintainability

Heart Track – IoT-enabled Heart Monitoring Application

Built responsive web application using React and Spring Boot for real-time heart rate and SpO2 monitoring with IoT sensor integration. Implemented secure user authentication, device registration, and physician portal. Visualized health metrics using Chart.js with historical trend analysis and configurable alert thresholds. Ensured mobile responsiveness and HIPAA-compliant data handling practices

CERTIFICATIONS

Google: Google Cloud Certified – Associate Cloud Engineer

NPTEL: Programming in C, Data Structures & Algorithms (Python)

Udemy: Angular – The Complete Guide (2024), Web Developer Bootcamp (2024)

HackerRank: Angular
