Email id : Suryachandra2692@gmail.com

PROFESSIONAL SUMMARY:

Having 9+ years of significant experience in the software industry with expertise in Software Quality Assurance. In-Depth experience in performing Functional Testing, Integration Testing, Backend Testing, Regression testing, User Acceptance Testing and API Testing using Selenium/WebDriver, Java and TestNG and Involved in automation testing using TOSCA. Proficient in designing, developing, and executing automated test scripts using Java, Selenium, and TestNG. Expertise in creating robust test cases, identifying defects, and ensuring the quality of web and mobile applications.

- Automation Testing Engineer with over 10 years of experience in designing, developing, and executing automated test scripts using Java and Groovy. Proficient in test automation frameworks, continuous integration, and test execution.
- 5+ years of experience specializing in test automation frameworks, particularly Spock.
- Experienced in creating Automated web services testing processes using SoapUI NG Pro tool and karate DSL framework.
- Involved in Functional Testing and creating Test suits using SoapUI NG Pro tool.
- Expert in developing Selenium Web Driver test scripts using Java and Test Frameworks using TestNG/MAVEN build tools.
- Hands on experience with sub version control tools like GIT and SVN. Experienced with SOAP, SOAP UI, RESTFUL technologies. Certified in Rest API testing automation framework with Java.
- Good experience in mobile testing using Appium in both IOS and Android applications using simulator and emulator.
- Experience with JMeter and LoadRunner performance testing tools. Experience with BDD and TDD using cucumber. Developed test scripts using Gherkin-Cucumber.
- Good knowledge on Test driven development (TDD) and Behavior driven development (BDD).
- Responsible for writing SQL queries to find out correct data for testing purposes. Worked on database validation using SQL queries.
- Extended experience in System Testing, Integration Testing, UAT testing, Performance Testing, Smoke Testing, Functional Testing, and Regression Testing.
- Experienced in creating and developing Test Strategies, Test Plan and Test Cases producing Bug Reports using ALM/Quality Center, JIRA.
- Tested web-based application on different operating systems such as Windows, Linux, and different browsers such as IE, chrome, Firefox.
- Experience in working with Agile management framework. Provided training to newcomers on testing tools and processes.
- Designed, build, and coordinate an automated build & release CI/CD process using Azure DevOps.

Skills:

Oracle, SQL Server, MySQL, MS SQL, Agile-Scrum, Waterfall, Eclipse, IntelliJ IDEA, Visual Studio Code, Java, HTML, XML, SQL, YAML, Selenium Web Driver, Selenium Grid, Cucumber, Gherkin, JMeter, LoadRunner, POSTMAN, IMacros, TestNG, Soap UI, TOSCA, Cypress, Keyword Driven, Data Driven, Behavior Driven, Page Object Model, Quality Center, HP ALM, JIRA, TestRail

Test Automation Frameworks: Spock, JUnit, TestNG

Programming Languages: Java, Groovy, Kotlin, Python

Tools: Jenkins, Git, Maven, Gradle, Selenium, Postman

Version Control: Git, Bitbucket

Databases: MySQL, PostgreSQL, Oracle

CI/CD: Jenkins, CircleCI, Travis CI

Methodologies: Agile (Scrum), TDD (Test Driven Development), BDD (Behavior Driven Development)

Other Tools: IntelliJ IDEA, Eclipse, JIRA, Confluence

Education:

- Master of Science in Data Analysis for Business Intelligence from University of Leicester - Leicester City, United Kingdom - 2021
- Bachelor of Technology in Computer Science and Engineering from Raja Mahendra College of Engineering - Hyderabad, India – 2014

Professional Experience:**HSBC – NEWYORK,****04/2024 - Current****SENIOR SDET ENGINEER**

- Participated in daily SCRUM meetings, created Automation test framework using TOSCA, worked with all modules of TOSCA, involved in documentation of Test results, developed automated regression test frameworks, built and enhanced automated test framework using Cypress.
- Utilized HP ALM for managing requirements, test plans, and defect logs for several software development projects.
- Developed and maintained manual test cases, executing them as per project timelines, and reported progress using HP ALM.
- Coordinated with product owners and development teams to validate test scenarios and ensure alignment with specifications.
- Used HP ALM to document and track defects, ensuring timely resolution and minimizing product defects in production.
- Assisted in the automation of test cases using HP ALM's integration with automated testing tools like QTP/UFT.
- Built and maintained **Selenium WebDriver** tests integrated with **TestNG** for a web application that handles real-time data processing.
- Worked closely with DevOps teams to automate deployment and testing processes, integrating automated tests with **Jenkins** CI/CD pipeline.
- Implemented performance testing with **JMeter** to measure the load and scalability of the application.
- Manage and automate build processes using **Maven**, ensuring proper dependency management and streamlined project builds.
- Developed and optimized complex PL/SQL queries, stored procedures, functions, and triggers for data retrieval and processing.
- Wrote batch scripts for automating routine tasks and database maintenance, improving operational efficiency.
- Assisted in designing and implementing Oracle database solutions, ensuring scalability, reliability, and high availability.
- Develop and maintain Bash scripts to automate system tasks such as backups, monitoring, and software updates, reducing manual intervention
- Developed and maintained Groovy-based automation scripts for building and deploying applications, reducing deployment time
- Integrated Groovy scripts with Selenium WebDriver for automating web-based testing, ensuring high-quality and bug-free releases.
- Utilize **Git** for version control, managing multiple branches and collaborating effectively with a team of developers on **GitHub** and **Bitbucket**.
- Integrate Maven-based projects into the **Eclipse** IDE for effective debugging, testing, and deployment.
- Integrated Automation scripts(Selenium WebDriver API) on CI/CD tools Jenkins for nightly batch run of the script.
- Extensively used Selenium IDE to record, Playback and Debug individual test cases, using Selenium WebDriver provided more flexibility in automating test cases.
- Develop and implement automation frameworks (Cypress, Appium) to enhance scripting, scalability, and maintenance.
- Lead a team in rewriting regression test cases, achieving significant improvements in test coverage and efficiency.
- Perform API testing (RESTful Web Services, GraphQL) using Postman for backend data validation, reducing bug fix rates.

Test Lead GPS UAT

Responsible for applying credit policies, documented customer inquiries, coordinated between billing and customers, monitored collections Analysts, built and enhanced automated test framework using Cypress, created Automation Test framework using TOSCA.

Worked on multiple projects Dashboard which give access to the customer to configure their Pi's with equipment's and sensors. Tested the IoT which is the main hub for the customers

Responsibilities:

- Actively involved in all phases of Software Development Life Cycle (SDLC)
- Managed the test life cycle using HP ALM, including test planning, design, execution, defect tracking, and reporting.
- Designed, developed, and executed manual test cases in HP ALM for web applications, ensuring alignment with business requirements.
- Collaborated with developers to identify, document, and resolve defects, improving software quality.
- Created test data and managed test scripts in HP ALM for both functional and regression testing.
- Performed end-to-end test reporting, creating test reports and metrics for stakeholders using HP ALM's analysis tools.
- Integrated automated tests into HP ALM for continuous integration and regression testing.
- Supported user acceptance testing (UAT) by managing test cases, results, and defect logs within HP ALM.
- Collaborated with cross-functional teams to ensure test coverage and mitigate any risks related to the quality of releases.
- Utilized **PyCharm** for debugging, unit testing, and managing Python projects, ensuring smooth workflow in the development environment.
- Collaborated with developers and QA teams to design and implement test strategies for new features.
- Debugged and optimized code with **PyCharm**'s built-in tools like the debugger, test runner, and virtual environments.
- Worked with a cross-functional team to design and implement automation testing solutions using **Selenium** and **Java**.
- Wrote complex automation scripts for functional, regression, and integration testing of web applications.
- Assisted in managing Maven dependencies and configuring project builds to ensure smooth integration and testing.
- Designed and developed stored procedures, triggers, and functions for various database applications.
- Wrote efficient SQL queries for data retrieval, aggregation, and reporting, ensuring quick response times for clients.
- Worked with the DBA team to monitor and optimize database performance and resolve slow-running queries.
- Developed complex reports using SQL and PL/SQL to support business decision-making processes.
- Worked in Eclipse to debug, run unit tests, and improve code quality through the use of plugins and version control tools.
- Collaborated with the team using **Git** for source code management, performing regular commits, pull requests, and code reviews on **GitHub**.
- Implemented automation frameworks using Groovy and Java for building, testing, and deployment processes, increasing efficiency in the development cycle.
- Developed and maintained Groovy scripts for Jenkins pipeline creation, ensuring smooth continuous integration and deployment.
- Created Groovy scripts to integrate with RESTful APIs for automated testing and service validation.
- Worked closely with DevOps teams to create automated deployment scripts using Groovy for managing cloud infrastructure (AWS, Azure).
- Troubleshoot hardware, software, and networking issues across Linux and Unix systems.
- Experienced in RDS SQL, MySQL Amazon Aurora and NoSQL database creation

QA Engineer

- Played a vital role in creation of Test Plan, Test Strategy, executed software testing including Unit, Functional, Integration, Regression, Cross Browser and Performance testing, worked on Cypress, involved in both Manual and Automation Testing.
- Created and executed performance test scripts using Apache JMeter for load and stress testing of complex web applications and REST APIs
- Conducted API performance testing with JMeter to verify response times, throughput, and error rates under varying loads.
- Developed custom JMeter plugins and wrote scripts in Groovy to enhance testing functionality and simulate complex user interactions.
- Worked extensively with the **Spock Framework** to build and maintain **end-to-end automation tests** for Java-based applications, covering both functional and integration tests.
- Wrote **API automation scripts** in Groovy using Spock to validate REST APIs and JSON responses, improving test coverage and ensuring API reliability.
- Conducted API performance testing with JMeter to verify response times, throughput, and error rates under varying loads.
- Worked as a QA Automation Engineer by testing the application manually and via automation framework.
- Provided 24/7 Unix/Linux systems support to ensure uptime and performance of mission-critical applications.
- Executed performance tuning and system optimization tasks for Unix servers to ensure maximum efficiency.
- Developed and maintained ETL pipelines with **AWS Glue** for integrating and transforming data from relational databases, APIs, and external files into **Amazon S3**.
- Wrote Python-based scripts to automate Glue jobs and optimized Spark SQL queries for faster execution on large datasets.
- Implemented data partitioning and compression strategies to improve S3 storage efficiency and query speed.
- Used **Amazon Athena** to query data stored in S3, providing ad-hoc analysis for business stakeholders.
- Responsible for developing automation framework using Cypress, JavaScript, Mocha Framework and Chai Assertions.
- Utilized Page Object Model concept with Cypress for test framework creation and maintenance.
- Extensively used Java, Selenium and BDD Framework for existing framework maintenance with Cucumber and TestNG.
- Performed parallel and cross browser testing by utilizing TestNG.
- Configured Jenkins as a continuous Integration server with GitHub and Maven by coordinating with the DevOps Team.
- Extensively used JIRA to report and track bug tickets.
- Utilized Confluence as a documentation tool for both manual and automation testing process.
- Responsible for creating end to end automation framework for Restful API testing using POSTMAN for Manual testing and Rest Assured for automation.

Netpay Merchant Services – Southampton, United Kingdom

QA Automation Engineer,

04/2022 - 09/2022

Developed framework for using Cypress to automate UI, performed UI and API Testing, developed test scripts using Selenium Web driver, created Modules in Tosca, involved in test plan and test case review meetings.

- Responsible for analyzing business requirements, functional and technical requirements documents.
- Worked closely with senior testers to create and execute test cases, managing them through HP ALM.
- Participated in the creation and review of detailed test cases and scripts in line with the project requirements.
- Logged and tracked defects in HP ALM, collaborating with developers to ensure quick resolution.

- Collaborated with cross-functional teams (development, QA, operations) to improve test automation and CI/CD workflows.
- Automated regression, smoke, and functional test cases using Selenium WebDriver, Java, and TestNG.
- Created, executed, and maintained automated test scripts for web applications to ensure high-quality releases.
- Performed API testing using REST Assured and Postman, ensuring the correct behavior of REST APIs.
- Developed and maintained automated smoke and regression test suites in Cypress using JavaScript programming language for UI Automation.
- Used POSTMAN for functional testing of Restful APIs.
- Used Apache JMeter for Performance testing of API.
- Created automation framework for API testing using Java, BDD Cucumber, JUnit and Rest Assured.
- Wrote SQL queries for backend testing to ensure that the data is updated as per the business rule and validate data integrity.
- Used Jenkins to integrate and deploy code on Continuous Integration environments.
- Utilized GitHub as a version control for automation framework.
- Used Jira as a project management tool and Zephyr for test case management.
- Worked on Jira tickets based on the priority and severity to meet the deadlines and avoid any delays in the release.
- Worked on providing daily updates to the team via Agile Daily Scrum Meetings.
- Participated in Sprint Retrospective meetings to provide feedback to the team for future improvement.

Myclassboard Educational solutions –

Hyderabad, India

06/2014 - 09/2019

QA Automation Engineer

- Software solutions, and services for the health, tax & accounting, governance.
- Designed and implemented automated test scripts using **Selenium WebDriver** and **Java** for functional, regression, and smoke tests.
- Created and maintained test automation frameworks using **TestNG**, **Page Object Model (POM)**, and **Data-Driven Testing**.
- Integrated automated test execution with **Jenkins** for Continuous Integration and Continuous Deployment (CI/CD).
- Worked closely with developers and product managers to ensure test scenarios cover all use cases, and helped identify and resolve defects early in the development lifecycle.
- Developed custom tools for API testing using **Postman** and **Rest Assured** for validation of REST APIs.
- Contributed to the creation of detailed test plans, test cases, and test scripts, ensuring efficient and thorough test coverage.
- Conducted cross-browser testing using **Selenium Grid** to ensure compatibility across various browsers.
- Participated in code reviews and mentor junior team members in automation practices.
- Created a test automation framework using Groovy and Selenium WebDriver for a large-scale eCommerce web application.
- Integrated test execution with Jenkins, enabling continuous integration and automated testing in the CI/CD pipeline.
- Designed and executed performance tests for web and mobile applications using JMeter and LoadRunner.
- Designed, executed and maintained Selenium Web Driver (TestNg,JUnit) Automated test cases for regression test cases.
- Selected the Test cases to be automated and performed functional testing of the front end using Selenium (IDE and Web Driver) and created Data driven framework using Junit.
- Executed parallel Browser testing on various machines using Selenium Grid and performed Cross browser testing.
- Performed Web based performance testing and analysis using Jmeter.
- Designed and maintained automation pipelines using Jenkins and Bash scripting to deploy updates and patches.
- Installed, configured, and maintained web servers (Apache, Nginx) and databases (MySQL, PostgreSQL) for various applications.
- Utilized version control systems (Git) to manage code and configuration changes across environments.
