SUMMARY

Software Engineer with 3+ years of experience building large-scale, AI-driven systems across Java, Python, React, and AWS. I deliver full-stack production applications end-to-end, from backend logic, to scalable cloud services, to interactive UIs and automated workflows. At Meta, I built GenAI platforms that automated high-impact workflows across 130+ products, eliminated 20,000+ engineering hours, reduced operational risk, and improved global operations used millions of times annually. I bring deep experience in full-stack development, AI/LLM-powered automation, and cloud infrastructure.

EXPERIENCE

Software Engineer | Meta

May 2025 – Present

- Developed centralized Integrity Compliance Dashboard (React, Hack, Java), giving 80+ engineering teams real-time visibility into compliance gaps and automated gap remediation triggers, saving ~20,200+ engineer hours to date and ~57 engineer hours per new product launch
- Mitigated \$1,000,000,000+ in regulatory fines, and reduced time-to-remediation by ~70%+ through creating Meta AI/GenAI LLM powered integrity gap remediation platform, automating closure of 350+ integrity gaps across 130+ Meta products on Instagram, Facebook, Messenger, WhatsApp
- Built Child Safety report indicator (React, Hack) to help Legal & Law Enforcement teams across 25+ countries prioritize sensitive user-reported content, cutting review time by ~43% across ~5,000+ reports daily and ~1,800,000+ reports annually
- Engineered scalable automated affidavit generation solution in Java for user data requests from India Government, streamlining 15,000+ requests to date to save ~5,500 Operations hours, improving compliance rate to ~95%+

Fullstack Software Engineer | U.S. News

Aug 2022 – May 2025

- Created Interactive Map component in React and Java, enhancing user experience & customer engagement by 28% and revenue by ~\$220,000 annually, through cross functional collaboration with Product Managers, UI/UX Designers, and Editors
- Analyzed and resolved complex issues in Java backend and Javascript React frontend components across 12 different Verticals & 55 Product categories, reducing team support tickets by ~15%, and increasing 200+ Editors satisfaction
- Mentored 2 Software Engineer Interns on the 360-Global team to design, plan, build, and test a URL Automation integration feature (Java) used across 1000+ guide articles and profile pages to date, cutting manual linking time by 90%
- Implemented Python AWS Lambda monitoring functions for 20+ internal servers & 300+ EBS and AMI Snapshots, cutting cloud infrastructure costs by 22%, and enabling real-time monitoring for services like U.S. News Premium College tool
- Planned, executed, and scaled server & web application migrations to Amazon Web Services cloud, configuring services such as S3, EC2, CloudFormation, and Systems Manager, enabling \$25k monthly cost reduction

Software Engineer Intern | U.S. News

Jan 2022 – May 2022

- Piloted SonarQube optimizations to analyze, refactor, and improve CloudFormation, Java and Python codebase on Gitlab, reducing technical debt such as code vulnerability, dead code, and code duplication by 32% to increase performance
- Migrated U.S. News Credentials Management server to AWS Secrets Manager, achieving secure and efficient retrieval of over 30+ credentials/secrets owned by IT managers, clients, and team members across 12 different business Verticals
- Configured CloudFormation templates and Jenkins CI/CD pipelines utilized by 130+ developers (infrastructure as code) to automate testing, monitoring, and deploying updates to apps and scalable AWS resources

Computer Science Teaching Assistant | Virginia Tech

Aug 2021 – May 2022

- Mentored students in Java programming, data structures & algorithms, Agile/SCRUM process, and software development practices & architecture during 10 hours/week office hours across two 16-week long semesters
- Co-facilitated 3 weekly lectures & group discussions in a class of 60 students, enhancing engagement and understanding
- Evaluated code submissions & provided individualized feedback on 20+ homework assignments to track student progress

Computer Science Ambassador | Virginia Tech

Aug 2021 – May 2022

- Promoted to represent the Virginia Tech Computer Science Department on a 15-person team of Student Ambassadors
- Orchestrated and facilitated 6 student information sessions, 2 career fairs, and 10+ other departmental events
- Supplied feedback and researched insights from the student perspective at quarterly Departmental Faculty meetings

EDUCATION

B.S. in **Computer Science** | Virginia Tech | GPA: 3.9 / 4.0

- **Relevant Courses:** Data Structures & Algorithms, Software Design & Data Structures, Software Engineering Capstone, Mobile Software Development, Object Oriented Programming

SKILLS

Certifications: AWS Certified Solutions Architect (issued July 2023)

Programming Languages: Java, Python, JavaScript, C, React, HTML, CSS, Golang, Kotlin, Hack, MySQL, GraphQL API

AWS Technologies: CloudFormation, Lambda, EC2, S3, Systems Manager, SNS, CloudWatch, IAM security

Developer Tools & Skills: AWS Cloud, Linux, Git/Github Version Control, Puppet, Jira, Confluence, Docker, Postgres, MongoDB, Figma, Slack, Microsoft Teams, Zoom, Code Review, Large Language Models (LLMs) prompt tuning
