Summary

- Software Developer and AI Engineer with 3+ years of experience in building web services and scalable software solutions, with a recent focus on AI-driven applications
- Proven in building BI AI assistants with RAG and LLMs for data insights using Python and frameworks like LangChain and OpenAI API
- Experienced with cloud platforms (AWS, Azure, GCP) for deploying scalable AI services and databases for enterprise solutions.
- Legally authorized to work in the U.S. and do not require sponsorship.

Technical Skills

- **AI/ML Frameworks:** LangChain, Hugging Face Transformers, Retrieval-Augmented Generation (RAG), CrewAI, OpenAI API
- **Programming:** Python, Java, JavaScript, TypeScript, C, SQL
- **Data & Visualization:** Pandas, NumPy, Matplotlib, Seaborn
- **Databases:** PostgreSQL, MySQL, MongoDB, Oracle
- **DevOps & Cloud:** AWS Lambda, AWS S3, AWS EventBridge, Azure, GCP, Docker, GitHub/Git, Copilot, Cursor AI, Postman
- **Web/Other:** Node.js, Spring Boot, Streamlit, HTML/CSS

Education & Certifications

Applied Generative AI Specialization - University of Michigan,

August 2025 - December 2025

Completed 70+ hours of instructor-led training with industry experts, earning a certificate from Michigan Engineering Professional Education. Fine-tuned foundation models for domain-specific applications, designed and deployed adaptive AI agents using LangChain, integrating advanced prompt engineering, Retrieval-Augmented Generation (RAG), and Image Generation.

See the Projects section for details.

Bachelor of Science in Computer Science - University of Houston - Houston, TX,

December 2022

Minor: Mathematics

Career Experience

Software Developer - Fortil, New York, NY

April 2023 – October 2025

Created and maintained RESTful APIs. Skilled in object-oriented programming, debugging, and collaborating with cross-functional teams to deliver reliable software solutions on time.

- Contributed to the design and testing of applications within an Agile environment.
- Configured applications with Spring Boot and implemented authentication and authorization with Spring Security.

Back End Developer Intern - IBM, Austin, TX

May 2022 – August 2022

Documented and supported the migration of web services to the IBM cloud environment by gathering stakeholder input and overseeing implementation steps.

- Created Docker containers for three Python projects to enhance accessibility and automate test results.
- Optimized three AI virtual agents through fine-tuning, leading to improved user interactions and reduced support tickets.

Additional experience as Test Automation Intern at Securian Financial(St Paul, MN) from June 2021 to August 2021

Relevant Projects

InsightForge/Business Intelligence AI Assistant - Python

November 2025

Developed an intelligent BI assistant to help organizations transform raw data into accurate, context-aware business insights leveraging LangChain, Retrieval-Augmented Generation (RAG), and Large Language Models (LLMs)

- Processed business information with pandas and created clear visual reports with matplotlib and seaborn, showing trends in sales, regions, and customer demographics.
- Integrated memory features that allowed the assistant to retain past interactions and provide more consistent, context-aware insights.
- Customized Cursor with AI configurations for enhanced chat capabilities in debugging and code generation. [GitHub Business Intelligence AI](#)
