

SANGAMESHWAR BALUR

EMAIL: Sangameshwarbalur@gmail.com

PHONE NO: +1-210-639-1232

Professional Summary:

- Over **15+ years** of software development experience in cutting edge technologies like **Java/J2EE, Apigee, Open API APIGEE Edge, Apigee X, IBM Datapower, AKANA API Gateway, Axway API Management, JAVA, Spring Boot Microservices, SOA, GCP cloud, AWS Cloud** and involved in the full cycle implementation of software design/object oriented design process including requirements gathering, prototyping, and proof of concept, development and maintenance.
- Worked for notable clients such as **USAA, CIGNA, Delta Airlines, Duke Energy, Wells Fargo and Bofa.**
- Extensive knowledge in end-to-end application development, spanning from **back-end Java and J2EE** technologies to **front-end frameworks**, with a specialization in **Spring Boot**, AWS, for building microservices and scalable applications.
- Having good domain knowledge in **Investment Banking, Health Insurance, Travel, Energy and Banking** domains.
- Strong experience in designing and implementing **RESTful API's**.
- Strong experience in Open API, Creating API proxies, and API lifecycle management using **Apigee Edge, Apigee X, AKANA API gateway and Datapower.**
- Developed and deployed API proxies on **Apigee Edge and Apigee X**, applying policies for transformation, throttling, and OAuth2/JWT-based security.
- Integrated **Google Cloud Platform (GCP)** services including **BigQuery** and **MySQL**, optimizing data access with advanced SQL techniques.
- Built real-time streaming pipelines using **Apache Kafka**, handling message delivery semantics and improving system responsiveness.
- Containerized microservices using **Kubernetes** and orchestrated hybrid deployments across Anthos, enhancing reliability and observability.
- Created automated CI/CD pipelines for API deployment using Apigee and **GCP**-native tools.
- In-depth understanding of **Microservices** Architecture, including hands-on experience in design, build and operations of Microservices based on Spring Boot and its eco system.
- Experience in implementing **Web Services** based in Service Oriented Architecture (SOA) using SOAP, Restful Web Services, JAX-WS, UDDI, WSDL, Apache Axis.
- UI design and development using Swing, **HTML5, JavaScript, JSP, JSF, CSS3, and Typescript.**
- Designing and implementing user interfaces using **Struts, Strut 2, Apache Wicket** for delivering web applications.
- Experience with **AWS services like** RDS/Aurora, S3 bucket, EC2, ECS, Lambda, CloudWatch.
- More than 8 years of working in Scrum Agile projects.
- Experience with RDBMS like **Oracle, MySQL**
- Integrated Java applications with **Splunk** for log and data analysis.
- **Hands-on coding experience** in building enterprise applications. Delivered multiple projects guiding team members in design, development, and code reviews
- Extensive experience in working closely with **cross-functional teams**, including designers, product managers, and other developers, to deliver high-quality software.
- Experience in identifying defects, problems, suggesting and determining the extent of programming required and performance tuning of the existing applications.
- Sound knowledge in **Object Oriented Methodology, Design Patterns**, Requirement gathering & analysis, designing UML - for developing application specific Object model, Use Case diagrams, Class diagrams, Sequence diagrams & State diagrams.
- Sound experience in development of applications using Agile methodologies.

- Exclusively worked on setting up post production tasks such as health check and performance monitoring alerts.
- Experience in Building and maintaining microservices, integrating with databases, APIs, and external systems and distributed systems using Spring Cloud components.
- Experience in Implementing **service discovery, load balancing, and circuit breaker patterns**.
- Experience with Docker Containers, leveraging Linux Containers and AMI's to create Docker Images/containers.
- Designed and implemented secure API policies using Axway Policy Studio for authentication, authorization, and traffic control.
- Configured OAuth 2.0, API keys, and mutual TLS for secure API access across internal and external consumers.
- Applied rate limiting, quota enforcement, and SLA monitoring to ensure reliable API consumption.
- Experience in using build/deploy tools such as **Docker, Jenkins**, and **AWS** for Continuous Integration & Deployment for Microservices (CI/CD).
- Configuration and Version control management using CVS, GIT, Bitbucket, Source Tree, Tortoise and SVN.
- Used Apache JMeter for API performance monitoring, **SonarQube** for code coverage and **Dynatrace** for performance monitoring, Splunk for tracing logs.

Education:

- Bachelors in computer application from JNTU, Hyderabad, India in 2006.

Technical Skills:

Programming Languages	Java1.5/1.6/1.8/11, SQL, Collections, Streams
UI Technologies	HTML, CSS, JavaScript, Typescript
J2ee Components	Servlets, JSP, JDBC, JSTL, EJB
API Management	AKANA API Gateway, Apigee Edge, Apigee X, and IBM Datapower.
Deployment Env	GCP Cloud, AWS Cloud, On premises data centers.
Frameworks	Spring Core, Spring MVC, Spring Cloud, Struts, Apache Wicket and Hibernate
Dev Ops Tools	GITHub, Bitbucket, Jenkins, Ansible, Kubernetes, Docker,
Splunk Logging, Dynatrace, Webex	
Testing Frameworks	Junit and Mockito.
Spring Cloud	Netflix Eureka, Hystrix
Middleware:	SOA, IBM WebSphere MQ, Netflix Zuul, Apache Camel
and Kafka	
Web Services	SOAP, REST, JSON, XML and XSD
Servers	Tomcat, Jboss, WebSphere and WebLogic
Op. Systems	Windows, Linux.
Database	Oracle12g, MySQL5.6 , IBM DB2
Tools	Postman Enterprise, Concourse, Harness, SonarQube,
Maven and Gradle	

Professional Experience:

Client:Nationwide Insurance Ohio

Oct 2023 – Till date

Role: JAVA APIGEE Engineer

Company : KGATE Technologies

Project is about API Governance to secure, manage and provide governance to API's across Nationwide organization also involves development of backend API's.

Technologies: JAVA, Springboot microservices, APIGEE Edge, APIGEE X, GCP Cloud, MySQL, UAC, Python, Harness, Kubernetes, Docker, postman and Concourse.

Roles and Responsibilities:

- Gathered financial transaction data from various sources and formats, including databases, log files, and external APIs.
- Architected and implemented secure, scalable microservices using Java and Spring Boot, aligned with Nationwide's customer experience platforms.
- Developed and managed RESTful APIs through Apigee Edge/X, enforcing strict OAuth2 and JWT-based access control for sensitive insurance data.
- Building Angular Single Page applications using Spring Boot microservices and also supporting them.
- Writing Python scripts to automate API proxy creation, revisions, deployments, and environment promotions using Apigee Management APIs.
- Writing Python jobs for Dataflow, Dataproc (Spark), or BigQuery ML workflows.
- Building applications which are Cloud Native in GCP cloud
- Integrated APIs with legacy systems and third-party providers, enabling seamless policy quoting, underwriting, claims processing, and account servicing.
- Utilized Kafka to build event-driven workflows for high-throughput real-time claim status updates, document processing, and customer notifications. Created scheduled Talend workflows and Talend Jobs that run in Kubernetes.
- Configure API's, proxy endpoints, API portals and API analytics based on technical specification using APIGEE Edge and APIGEE X.
- Designed and implemented secure API policies using Axway Policy Studio for authentication, authorization, and traffic control.
- Managed full API lifecycle including design, registration, deployment, versioning, and retirement using Axway API Manager.
- Monitored API traffic and performance using Axway API Gateway Manager and integrated logging tools like Splunk.
- Designed MySQL and BigQuery data models to support actuarial computations, fraud detection analytics, and customer engagement metrics
- Orchestrated secure service deployments on Kubernetes clusters managed via Anthos, ensuring business continuity across hybrid environments.
- Added policies like service callouts, JsonThreat Protection using APIGEE.
- Created KVMs and Products using APIGEE.
- Used SQL to perform data extraction, transformation, and loading processes, ensuring data quality and consistent.
- Cleansed and preprocessed raw data to remove noise, handle missing values, and ensure data quality.
- Shared knowledge and insights with team members and contribute to a culture of continuous learning

Client: Bank Of America, Charlotte NC

Feb 2023 – Oct 2023

Role: Senior API Developer

Company : KGate Technologies Inc

BASIS: Automation of Structured Notes bookings for FICC and Equity Asset classes by eliminating the current manual dual keying of trade bookings to the subledger system and triple booking into proprietary Equity/Global Markets Trade capture systems. BASIS supports in identifying, trading and reporting ICL arrangements.

Technically Its monolithic application based on JDK1.6/Java Server Face/JDBC/WebSphere server, migrated to Micro Services and docker.

Technologies: Java8, Spring Framework, Spring Boot, AWS Cloud, Angular, Oracle12G, Unix, Maven, Ansible, OpenShift , JMS, Concourse and Harness.

Responsibilities:

- Requirements Gathering, Resource Allocation, **High and Low-level design, Development, Implementation**, Testing, and Production Deployment/Rollout.
- **Collaborated** with cross-functional team leads, business champions, senior leadership and other key stakeholders throughout all phases of the projects.
- Securing API's using **Apigee**.
- API lifecycle management using **Apigee**.
- Creating pipelines for Continuous integration using Github, Concourse and continuous deployment using Harness.
- Developed **Spring Boot Micro Services** for Reports/CQ/PQ data and exposed to RPA and BPM automation process.
- Implemented **Spring Batch** for scheduled data load of Trade data.
- Used Spring Core Annotations for Dependency Injection Spring DI and Spring MVC for REST API's and Spring Boot for microservices.
- Implemented Testcases using spring boot testing framework (Junit5 and Mockito).
- Integrated application with Splunk to monitor and alert to notify application's health and issues.
- Worked closely with **infrastructure** and **DevOps** teams to define deployment strategies and optimize application performance in production.
- Deployed Spring Boot based micro services docker container using Amazon EC2 container services and using **AWS** admin console.
- Responsible for identifying and resolving issues, debugging problems, and ensuring the application's stability and performance.
- Deployed and maintained applications on amazon web services (AWS) using services like S3, EC2, CloudWatch and Lambda.
- Responsible for implementing the transaction management in the application by applying Spring Transaction and Spring AOP methodologies.
- Implemented Object-relation mapping in the persistence layer using hibernate framework in conjunction with spring functionality.
- Used Oracle 12g as a backend database using Windows OS. Involved in development of Stored Procedures, Functions and Triggers.
- Configured Hibernates second level cache using EHCache to reduce the number of hits to the configuration table data.
- **ORM tool Hibernate** to represent entities and fetching strategies for optimization.
- Designed the application by implementing spring based on MVC Architecture, simple Java Beans as a Model, JSP/JSF UI Components as View and Action Servlet as a Controller.
- Used JUnit, Mockito and Power Mocks framework for unit testing of application and implemented Test Driven Development (TDD) methodology.
- Used Dynatrace for performance monitoring and Splunk being used for logs tracking,
- Developed Jasper Reports using ireport Designer tool and exported data using Apache poi library.

Client: Wells Fargo, Charlotte, NC

Feb 2022 – Feb 2023

Role: Senior API Developer

Company : Genesis 10

Online Access Management(OAM) & Login Application. This project is about login management applications. These applications are used to login to wells Fargo portal. This project involves migration from legacy Spring MVC application to Spring Boot microservices and also includes cloud migration. Improving security, logging mechanism and upgrading technologies are part of this effort.

Technically Its monolithic application based on JDK1.6/Java Server Face/JDBC/WebSphere server, migrated to Micro Services and docker.

Technologies: Oracle Web Commerce, Java8, Spring Framework , Spring Boot, AWS Cloud, React ,Oracle12G, Unix, Maven ,Tomcat, Apache Kafka

Responsibilities:

- RESTful Services/JSON for Bank Applications for both Mobile and Online Banking using Spring Boot, Spring Cloud, and Micro Services architecture.
- Being Lead developer analyzed and fixed critical production and non prod defects.
- Core java development for different components. Developed the application using Core Java, Multi-Threading, Spring Core, Beans, JDBC, Transaction .
- Translate software requirements into working and maintainable solutions within the existing application frameworks.
- Used Amazon Cloud Watch to monitor AWS services and Amazon CloudWatch logs to monitor applications.
- Designed and developed asynchronous RESTful Microservices using Spring boot.
- Validate software releases, patches, bug fixes in development and test environment.
- Resolving deployment issues and coordination with Operations for deploying services in production.
- Securing REST API with AKANA gateway tool which allowing LDAP authentication and authorization Develop Web Application using HTML 5, CSS , Javascript and Angular.
- Scrum agile with 2 weeks of sprints.
- Configured Kafka to handle real time data.
- Written Complex SQL queries and stored procedures using SQL server database
- Performed unit testing, system testing and user acceptance test using Junit, Mockito and spring Test.

Client: MUFG (Union Bank), Charlotte, NC

July 2019 – Feb 2022

Role: Senior API developer (API Governance)

Company : Capgemini

Description: Digital Channels API creation is a common SOA team focused on building REST API's for all consumer applications like Online Banking applications, Mobile applications by connecting to downstream systems and vendor applications.

Technology: AKANA API Gateway, IBM DataPower, Spring 5.0, Micro Services, Spring Boot, Javascript, HTML 5, CSS, , Ignite ICS, Lombok, Logback, Apache Kafka, TOAD for Data Java 8, AWS, J2EE, Restful, Swagger Open API 2.0, GitHub, Agile, Splunk, Ignite ICS.

Responsibilities:

- As a Lead developer, understanding business requirements based upon the Functional Specification and designing Swagger 2.0 for REST API's using Ignite ICS or Swagger Codegen.
- API lifecycle management using AKANA API Gateway and DataPower.
- RESTful Services/JSON for Bank Applications for both Mobile and Online Banking using Spring Boot, Spring Cloud, and Micro Services architecture.
- As a Lead developer help offshore and Onsite developers with solving technical issues.
- As a Lead developer work involve in Vendor integration meetings to finalize solution approach.
- Being Lead developer I will analyze and fix critical production and non prod defects.
- Being Lead developer I train and help 7 offshore resources and 3 onsite resources who report to me.
- Core java development for different components. Developed the application using Core Java, Multi-Threading, Spring Core, Beans, JDBC, Transaction .
- Create Swagger document using Ignite tool for REST API's.
- Design and Development of High Performance CPD processes by using multithreaded processes which in turn improved the performance by a lot.
- Create Physical Service, Virtual service and define contracts between SOA REST API's and Consumers using AKANA gateway.
- Translate software requirements into working and maintainable solutions within the existing application frameworks.
- Develop Web Application using HTML 5, CSS , Javascript and Angular.
- Worked on containerized deployments through docker containers and orchestrated through the Kubernetes using AWS EKS. Auto scaling of pods is done based on the dynamic parameter like messages in the queue.
- Managed AWS infrastructure using tools like Cloud Formation and Terraform.
- Validate software releases, patches, bug fixes in development and test environment.
- Resolving deployment issues and coordination with Operations for deploying services in production.
- Securing REST API with AKANA gateway tool which allowing LDAP authentication and authorization.
- Securing SOAP API using IBM Datapower tool for authentication and authorization.

Client: Duke Energy, Charlotte, NC

May 2017 – June 2019

Role: Senior Java Developer

Company : Cognizant

Description: Meter Data Management (MDM) prepares Duke Energy for the demands of AMI metering technology by building the foundational components to enable meter data

management on the Oracle Utilities 2.0 platform. Along with this there are some Operational Enhancements (OE) going along with this project that enable more functionality added to the current system. This is integrated with complete four billing systems of Duke Energy.

Technology: Java 7, J2EE, Angular 2, spring, Spring Boot, Microservices, JMS, Hibernate, XML Schemas, CSS, JQuery JavaScript, HTML5, XML, Design Patterns, Unix, TOAD for Data Analyst 2.7, RAD 8.0, IBM Web sphere 8.0, Java SE 6, SVN, Java EE, Jenkins, SOAP UI 9.1.6, CA Work Load Automation, IBM WebSphere MQ, WINS CP, IBM DB2, Oracle, Microsoft SQL.

Client: Duke Energy, Charlotte, NC

June 2016 – May 2017

Role: Senior Java Developer

Company : Cognizant

Application: Pre-Pay PayAsYouGo

Description: Pre-Pay provides customer an option to more dynamically manage their energy usage and budget, realize greater payment flexibility, avoid security deposits and late fees and feel a greater sense of control in their billing and payment options. There are many functionalities as part of this project that include but not limited to Enrolment, Unenrollment, Email Reminder, Lighting etc.

Technology: Windows7, Unix, Spring Frame work, TOAD for Data Analyst 2.7, RAD 8.0, IBM Web sphere 8.0, Java 7, SVN, Notepad++, Java EE, KDIFF, Jenkins, SOAP UI 9.1.6, BMC Remedy, Picasso.

Client: Delta Airlines - Atlanta, GA

Oct 2014 – June 2016

Role: Senior Java Developer

Company : Cognizant

Application: Acculynk and China Unionpay Form of Payments

Technology: J2EE, Java, JSP2. 0, Servlet, JDBC 2, Struts Frame Work 2, Junit, log4j, SOAP Web Services, JavaScript, DHTML, CSS, Hibernate3, DB2, JSON, Jenkins, Maven, WebSphere Application Server 7.0, Ant 1.6, ClearCase, Unix-IBM AIX version 5.

Client: Goodman Manufacturing Company - Houston, TX

Nov 2013 - Sep 2014

Role: Senior Java Developer

Company : Miracle Software Systems

Application: GDI Online Gateway Application and Parnterlink Application Redesign

Technology: Java / J2EE 1.6, Spring Framework, Spring MVC, Spring WebFlow, Javascript, HTML, CSS, JQuery, Hibernate, Eclipse for IDE, Oracle 9i/10g, SQL Navigator, Maven, SVN, Apache CXF, Putty.

Client: United Services Automobile Association (USAA) - San Antonio, TX May 2010 - Nov 2013

Role: Senior Java Developer

Company : Miracle Software Systems

Application: Investment Banking – Online Retirement Center

Technology: Java / J2EE, JSP 2. 0 Servlet, Hibernate, Struts 2, DB2, RSA 8.0 (Rational Software Architect), RTC, Maven, StarTeam, Jenkins, SOAP web services, Putty, Beyond Compare, Star UML.
