

CHAKRADHAR GRANDHI

Software Engineer | (408) 471-8189 | chakradhar.grandhi0428@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY:

Results-driven Software Engineer with 4 years of experience designing and deploying scalable, high-performance systems using Java, Spring Boot, and React.js. Improved system throughput by up to 20% and accelerated CI/CD workflows by 15% through robust API design, microservices architecture, and automation with AWS, Docker, Jenkins, and Kafka. A trusted Agile contributor who mentors peers and drives engineering excellence through clean code, comprehensive test coverage, and rigorous design reviews. Eager to build resilient, customer-obsessed backend platforms and infrastructure.

SKILLS:

Programming Languages: Java (Core & J2EE), Python, SQL, JavaScript, C++, C#
Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, JSF, React.js, NumPy, Pandas, Selenium, TestNG
Web & API Technologies: HTML, CSS, Bootstrap, jQuery, AJAX, REST, JSON, XML, JSP, Servlets, JDBC
Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, DMS, SNS, SQS, Elasticsearch), Azure, GCP, Docker, Jenkins, Kafka
Tools & Platforms: Postman, Git, Splunk, Unica, FileZilla, PuTTY
Databases & Methodologies: MySQL, PostgreSQL, NoSQL, Snowflake, Agile, SDLC, Waterfall

EDUCATION:

Master of Science in Information Systems Dec 2024 Northeastern University Boston, MA	Sep 2022 -
--	-------------------

EXPERIENCE:

ServiceNow, Boston, MA Software Engineer - Designed and developed scalable web applications using C#, Core Java, and Spring Boot, improving system performance by 20% through optimized code and microservices architecture. - Implemented secure RESTful APIs with Spring Security and JPA, ensuring authentication and data integrity for enterprise-level workflows. - Collaborated with cross-functional teams in an Agile environment to deliver features, leveraging JDBC and Servlets for seamless database connectivity with MySQL and PostgreSQL. - Utilized AWS (EC2, S3, Lambda) for cloud deployment and integrated Jenkins for CI/CD pipelines, reducing deployment time by 15%. - Conducted unit testing with JUnit and TestNG, achieving 90% code coverage and minimizing production bugs. - Enhanced front-end interfaces using React.js, HTML, CSS, and Bootstrap, improving user experience and responsiveness across platforms. - Monitored application performance using Splunk, identifying and resolving bottlenecks to ensure 99.9% uptime.	Jul 2024 – Current
--	---------------------------

WhoozCooking, Boston, MA Software Engineering Intern - Saved \$64,000 annually by optimizing delivery logistics and mitigating bugs by integrating DoorDash API using Java 8, Hibernate - Reduced production bugs by 25%, using Postman for end-to-end testing and REST service mocking to validate API endpoints - Achieved a 30% reduction in unauthorized access incidents by optimizing session management and payment processing through OAuth 2.0, JWT tokens, and Spring JPA (Java 8), as validated by metrics monitored via AWS CloudWatch - Pioneered an end-to-end transaction alert subscription flow with Twilio using Core Java, Hibernate, and Spring Batch for CRUD operations on alert templates; documented APIs with Swagger UI, deployed using Docker, achieving 100% message delivery - Automated ATDD with CI/CD pipelines using AWS Code Pipeline, Terraform, and GitHub Actions, cutting deployment time by 25% and enabling zero-downtime blue-green deployments and fulfilling the Sprint user requirement - Improved event processing efficiency by 40% by implementing Apache Kafka for streamlined message handling across microservices. - Led data migration from MongoDB to AWS Document DB using AWS DMS, Lambda, improving data accessibility with other AWS services.	Jan 2024 – Jul 2024
---	----------------------------

Cisco Systems, Bengaluru, India Software Engineer II - Created and deployed microservices with REST APIs (Java 8/J2EE, Spring Boot, MongoDB) handling 800 API requests/minute to monitor and analyze router triggers (failovers, latency spikes) - Leveraged a real-time event processing pipeline using Apache Kafka and Spring Boot, efficiently handling 500K+ events/sec, reducing latency by 35%, and ensuring fault-tolerant, event-driven workflows - Led the implementation of Test-Driven Development (TDD) for unit testing, REST service mocking using JUnit, Mockito, Selenium, achieving 90% code coverage, enhancing code quality and reliability - Collaborated with clients and test engineers to resolve UAT and production issues using SDLC tools (Jira, CloudWatch, JBoss), achieving a 98% resolution rate on agreed SLAs - Guided a team of 7 junior engineers by facilitating knowledge transfer sessions and Agile training to enhance their expertise.	Aug 2021 – Apr 2022
---	----------------------------

Software Engineer I - Engineered a financial analytics module with Java 8 and Spring Boot to handle high-frequency data processing, integrating it with a React- based front-end module, improving user engagement and data visualization by 35%. - Implemented API endpoints with RESTful principles in Java (Spring Boot), Node.js (Express.js), reducing inter-service response time. - Designed 20+ React interfaces with Redux, Node.js, Express.js, High charts, for real-time financial data visualization. - Automated CI/CD pipelines with Jenkins and Git, halving release cycle times and boosting build efficiency by 40%.	May 2020 – Jul 2021
--	----------------------------

Software Engineering Intern Created a network protocol analytical tool employing Python, Flask, Scapy, and MongoDB, with cron jobs facilitating daily data exports to third-party applications; this innovation resulted in a 30% increase in response time by completing tasks in under 10 minutes.	Jan 2020 – Apr 2020
--	----------------------------

PROJECTS:

Cloud Native Microservice-based AWS Automation | [Link to Repo](#) | Cloud Computing, AWS

- A Scalable cloud-based user onboarding platform that automates user registration and verification.
- Developed AWS infrastructure using Terraform (IaC) to provision VPC, S3, RDS, and SNS, optimizing cloud resource management.
- Implemented GitHub CI/CD pipeline to streamline deployment by building custom AMI with Packer triggering instant refresh in ASG.

Stocks Management System | [Link to Repo](#) | Java, Spring Boot, Kafka, GraphQL, RESTful APIs, H2

- Architected a stock management system with Alpha Vantage API for real-time data integration, employing design patterns like Dependency injection, Singleton, etc. Utilized Kafka for fault-tolerant message queuing for better order execution, ensuring 99% uptime.
- Developed GraphQL API and Restful API services for seamless stock order management, cutting data retrieval times by 40%.

Chat Application | [Link to Repo](#) | Java, Spring Boot, Kafka, H2, React.js, Node.js

- Pioneered real-time messaging with Kafka and Axios, ensuring fast and reliable API communication with minimal latency.
- Incorporated JWT for application security and role-based access control, leveraging H2 for efficient testing and seamless integration.
