

Marcos Delgado
marcosdp999@gmail.com
(669) 677-5331

Java Full Stack Developer
www.linkedin.com/in/marcos-d-607002244

Professional Summary:

OBJECTIVE:

9+ Years of experience backed with rich domain and practical knowledge along with an understanding of several IT technologies, I seek a career as Java Full Stack Developer with challenging assignments to amalgamate personal enrichment with professional goals.

PROFILE SUMMARY:

- Expert in Various **Agile** methodologies like SCRUM, Test Driven Development (TDD), Incremental and Iteration methodology, Pair Programming, Agile Development & SDLC.
- Experienced in Development, Testing and Deployment of enterprise applications on Windows, Linux and UNIX platforms using **IDE's** such as **STS, NetBeans, IntelliJ**.
- Good knowledge in **Angular I.O, 4/8/9/11/12 directives** to create reusable elements and attributes, along with easy test and maintain client-side interactivity in web applications.
- Used Angular 9 Template Driven forms and Modern Driven (Reactive) forms to perform form validations both on server and client side.
- Previous experience working on green-field applications; confident self-starter.
- Hands on experience in development using Shell, Python, and Groovy scripting to automate processes.
- Used CI/CD tools Jenkins, Git/GitLab's, Jira and Docker registry/daemon for configuration management and automation using Ansible.
- Expertise with integrating enterprise applications using Spring with **Kafka** and **Zookeeper**.
- Experience as .NET developer in developing Windows based and web based applications using .NET technologies such as C#, VB.NET, ASP.NET, ADO.NET
- Worked at optimizing volumes and EC2 instances and created multiple VPC instances. Implementing new projects builds framework using **Jenkins & maven** as build framework tools.
- Prepared CI and CD, along with code quality check, using Git, Jenkins, SonarQube, Maven, and Nexus for Java App.
- Automate provisioning and repetitive tasks using **Terraform**.
- Played a key role in automating the deployments on AWS using GitHub, Terraform, Ansible and **Jenkins**
- Experience in using **JavaScript and Typescript** with libraries such as **Angular, Bootstrap**.
- Created database design for different feeds to be accommodated in **Vertica**
- Hands on experience using HTML5, CSS3, JSP with focus on Cross-browser/Cross-platform compliance.
- Developed core modules in large **cross-platform applications** using Node JS, JAVA, J2EE, Spring Boot, Struts, JSF, iBATIS, Hibernate, JSP, Servlets, JDBC, Web Services (SOAP, REST), Micro Services. Spring Cloud
- Strong experience in **Spring Framework** modules such as Spring MVC, IOC, AOP, JDBC, JTA, ORM, Spring Boot, Spring Micro services, Spring REST, Spring Eureka.
- Experienced in implementing Service Oriented Architecture and **Web Services** using SOAP, REST.
- Developed applications using Spring 4.x, Hibernate 4.x, REST.
- Expertise with integrating enterprise applications using Spring with **Kafka** and **Zookeeper**.
- Used **Responsive Web Design** so that the website is compatible with different devices like desktops, laptops, tablets and smart phones.
- Experience in managing infrastructure/applications built on Big Data technologies (e.g., **Hadoop**) and web-based service.
- Involved in using Terraform in order to migrate legacy and monolithic systems to Amazon Web Services.
- Used Terraform scripts to Automate Instances for Manual Instances that were launched before.
- Experienced in provisioning highly available EC2 Instances using **Terraform** and **Cloud Formation** templates.

- Experienced in Setting up the build and deployment automation for Terraform scripts using **Jenkins**.
- Execution of test cases using shell scripts and basic Linux commands on different targets with new builds and binaries for verifying compatibility of devices.
- Expertise in Clusters using **Kubernetes** and worked on creating many **pods**, replication controllers, services, deployments, labels, **health checks**.
- Developed Scripts for AWS Orchestration using terraform and cloud formation.
- Setup and build AWS infrastructure various resources, VPC, EC2, S3, IAM, EBS, Security Group, Auto Scaling, and RDS in Terraform and Cloud Formation. Designed AWS Cloud Formation templates to create custom sized VPC, subnets, NAT to ensure successful deployment of Web applications and database templates.
- Automated the applications and **MySQL** container deployment in **Docker** using **Python** and monitor them using Nagios.
- Experience in creating **Docker** images, push/pull and integrating with Angular, React and Spring Boot.
- Experienced with **XML** related technologies such XML, XSLT (DOM, SAX), XPATH and DTD.
- Experience in database modelling, tuning, design and development of PL/SQL stored procedures, packages **inrelational databases**: SQL Server 2005/2008, DB2, PostgreSQL and MySQL.
- Experienced in Middleware persistence frameworks like **Hibernate/JPA Entities** for mapping Java classes using Hibernate Query Language (HQL), HSQL Named Queries, Criteria and Projections.
- Experience with build tools like **Maven, Gradle and Logging tools** like Log4J2.
- Experience with CI/CD-ANT, MAVEN, GRADLE, JENKINS, CVS, GIT, GITHUB, Bitbucket
- Experience in testing with JUnit Framework using Mockito and Easy Mock, Spring Junit Runner, JMeter.
- Expertise in several testing environments like JUnit, Selenium, Jenkins, SoapUI and System Testing.
- Experience in working with web servers like Tomcat 8, Glassfish, Jetty, JBoss7.1.0 and WebLogic

Skill Set:

<u>Programming Languages</u>	C, C++, Java/J2EE, SQL, PL/SQL
<u>Java APIs</u>	J2EE, EJB, Servlets, JSP, JSTL, Custom Tag Libraries, JAX-RPC, JDBC, RMI, JNDI, JMS, JAXB, JUnit, AWT, Swing, SOAP, Rest API
<u>Frameworks</u>	Spring, Hibernate, Struts, Angular JS, Angular, React
<u>Scripting Languages</u>	JavaScript, jQuery
<u>UI/Web Technologies</u>	HTML/HTML5, XML, CSS/CSS3, JSP, Boot Strap, JSON
<u>Web/App Servers</u>	Apache Tomcat, Web sphere, Web logic, JBOSS
<u>IDE's/API's</u>	Visual Studio, Eclipse, Net beans, IntelliJ
<u>RDBMS</u>	SQL Server, Oracle, Postgres SQL, Mongo DB
<u>Operating Systems</u>	Windows, Unix, Linux (Ubuntu, Red Hat)
<u>Version Control</u>	SVN, GITHUB, Jenkins
<u>Methodologies</u>	Agile, Waterfall
<u>CI/CD</u>	Docker, Jenkins, AWS

<u>Others Software Skills/tools used</u>	MS Office, Visio, Adobe Photoshop, Git, JIRA,

EDUCATION:

Bachelors in Computer Science

CERTIFICATION:

SQA Level 9 (Software Engineering)

Work Experience:

Client: Pfizer, Remote

Feb 2020 – Till Date

Role: Java/J2EE Full Stack Developer

Responsibilities:

- Followed **Agile** Methodology to analyse, define, and document the application which will support functional and business requirements.
- Built the complete front-end web application, by creating components in **LWC** (Lightning Web Component)
- Implemented DevOps tools for **CI/CD** of the application, hosted on Google Cloud Platform
- Actively participated in the daily scrum meetings to produce quality deliverables within time information and helped clearing ambiguity in requirements document.
- Worked with **Angular 12** to develop UI Templates for individual sections of a document. Also worked on **HTML5, CSS4, Bootstrap, and AJAX**.
- Created mapping to **transaction data** for newly created components, and projections for tuning statistics in Vertica
- Create scripts in Teradata and Vertica for data movement for various streams to various applications
- Used advanced **Java 8** features like Lambda expressions for array operations, Streams, Method reference, Collections. Enhanced concurrency methods throughout the application for defined program.
- Used Spring including Spring core/IOC, Spring Batch, Spring Boot, Spring Security, Spring JPA.
- Deployed Spring Boot based Micro Services into **Docker** containers using **AWS** EC2 container services and implemented Spring REST to create REST endpoints and integrated Swagger.
- Configured and maintained Jenkins to implement the CI process and integrated the tool with Ant and **Maven** to schedule the builds.
- Successfully designed and implemented a **Kafka-based** real-time streaming platform for a large retail organization, resulting in a significant reduction in processing time and improved data accuracy.
- Created and maintained data pipelines using **Kafka Connect and Kafka Streams**, enabling seamless integration of data from various sources into the company's data ecosystem.
- Scheduled, deployed and managed container replicas onto node cluster using Kubernetes and Configured private cloud using Kubernetes that supports DEV, TEST, and PROD environments. Implemented AWS solutions using **EC2, S3, RDS, Dynamo DB, EBS, and Elastic Load Balancer, Auto scaling groups, Cloud Trail, Elastic Bean Stalk, Route 53 and Elastic Cache**.
- Extended On – Premises infrastructure storage to **AWS** by using Storage gateways and created S3 buckets, configuring buckets with permissions, logging, versioning and tagging. Monitoring and Alerting of production and corporate servers using **AWS Cloud Watch and Nagios**.
- Developed **AWS Cloud formation** templates to create VPC, Subnets, NAT, EC2 instances, ELB, Auto scaling groups. Hosted Web Apps and RDS Instances in private cloud and maintained secure connection by using NAT Gateways.
- Created highly available and scalable infrastructure in AWS cloud by using various AWS services like EC2, VPC, Security Groups, Network ACL, Auto scaling, ELB, RDS, Cloud Watch, Route53, S3, IAM, Elastic Bean Stalk, EBS, SNS,

SQS. Managed and worked with various instances of **EC2**, **creating AMI's**, managing EBS volumes and configuring security groups, elastic IPs etc.

- Using **AWS Lambda**, running scripts/code snippets in response to events occurring in AWS Cloud and maintaining it. Configured Ansible Playbooks for Upgrading the Linux kernel, installing and managing Java versions and managing persistent SSH tunnels.
- Wrote **Python Scripts**, Shell Scripts to deploy the java based packages like .ear and .war on the WebLogic App server.
- Configuring, managing the Auto Scaling Groups, Elastic Load Balancers (ELB) and EC2 snapshots for high availability.
- Working on Infrastructure as a code automation using the tools Terraform and **AWS CloudFormation**.
- Developed and consumed REST based Web services to allow communication between the applications.
- Used Mongo as database and **Spring Hibernate** ORM and JPA for data persistence and retrieval of data like information of current customer enrollment etc.
- Using Python included Boto3 to supplement automation for tasks such as encrypting EBS volumes backing AMIs and scheduling Lambda functions for routine AWS tasks.
- Used **Maven** to build project along with Sonar repository and Jenkins for continuous integration.
- Developed Microservices using Spring Boot and deploying into **AWS** cloud using **Jenkins**.
- Experienced build the Microservice and push the Docker Container image to the **Docker** registry.
- Used **Maven** as build automation tool and responsible for **CICD** process implementation using Jenkins.
- Experience in handling messaging services using **ApacheKafka**.
- Developed **JUnit** test cases for continuous integration testing.
- Did load testing of **Restful** services using **SOAP** UI and Apache JMeter tools.
- Work closely with business counterparts, IT stakeholders, application architects, business users.
- Created User stories by analyzing the client requirements and later gave estimations.
- Performed the technical design reviews, code reviews, Troubleshoot the issues reported, fixing the bugs, and updating the code as per the new requirement.
- Monitoring the reliability and performance of the webapp service by performing testing and creating automated tests.
- Used JIRA to assign, track, report and audit the issues in the application.
- Worked on Mongo collections to perform create, insert, update, and delete operations.
- Working on SQL queries, Creating or altering Views using Postgres.

Environment: Java 1.8, Spring Boot, Microservices, HTML5, CSS3, Spring JPA, Postgres, REST, Angular 9, JIRA, Agile, Swagger, Eclipse, Maven, Jenkins, Docker, Tomcat.

Client: Verizon, Tulsa, OK

May 2018 – January 2020

Role: Java Full Stack Developer

Responsibilities:

- Involved in Daily **Scrum** meetings, Sprint planning and estimation of the tasks for the user stories
- Worked on HTML5, CSS3, JavaScript, Bootstrap, Angular and AJAX.
- Used **Spring framework** including Spring core/IOC, Spring Batch, Spring Boot, Spring Security, Spring ORM, Spring AOP modules. Spring Eureka
- Experience in handling messaging services using **ApacheKafka**.
- Designed **Kubernetes cluster** using **AWS-Kops (EKS)** and configuring and deploy the Kubernetes dashboard to access the cluster via its web-based user interface. Created Projects and services for load balancing and adding them to **Routes** to be accessible from outside in Kubernetes and creation of **pods** through new application and control the scaling of pods, troubleshooting pods through SSH and logs using Kubernetes.

- Deploying Docker containers for Microservices in **AWS Elastic Kubernetes Service** (clusters by integrating Jenkins (CI/CD) pipeline and Elastic Container Registry (ECR) to store docker images. Used Kubernetes to deploy scale up operations of clusters and manage docker containers with multiple name spaced versions.
- Implementing or exposing the **Microservice architecture** with Spring Boot based services interacting through a combination of **REST** and spring messages.
- Deployed **.Net** web applications over cloud services (web and worker roles) on Azure, using PowerShell. Implemented Azure Active Directory for single sign-on access to thousands of cloud SaaS applications like Office 365, Dropbox.
- Skilled in Developing Automations using power shell and bash script for deploying different applications like .Net, DB, Java, Web, in Azure DevOps
- Automating weekly releases with **ANT/Maven** scripting for compiling Java code.
- Implemented microservice architecture using Spring boot and Spring REST to create REST endpoints and integrated Swagger to get dynamic documentation.
- Used C#, MVC, ASP.Net Web API, web forms in the application with MVC 5.0 Razor Engine. Service layer was developed using ASP.Net Web API for RESTful services.
- Used ASP.NET validation controls for validating the information provided by the user and implemented input validation using the ASP.NET
- Developing scripts for build, deployment, maintenance and related tasks using Jenkins, Docker, Maven, Python.
- Conducting proof of concept (POC) and deployed an **Azure instance** for a hybrid-based authorization.
- Creating Azure services such as compute virtual machines, Azure storage, Azure active directory, SQLDatabase, Azure DNS and Azure Application Insights. Created Azure Virtual Networks, Azurenetwork, and **Azure cloud**.
- Used Spring Framework **AOP** Module to implement logging in the application for the application status.
- Involved in setting up Spring security in securing the app based on user roles.
- Implemented the application using **Spring Boot** Framework and handled the security using Spring.
- Create **RFP** (Request for Proposal) to provide RESTful API utilizing Spring Boot with Spring MVC.
- Build **REST/SOAP** based Services for all user-based operations like enroll user, modifying user and authenticate user depending on risk factor of the user login.
- Developed and consumed **REST** based Web services to allow communication between the applications.
- Designed and developed business and persistence layer components using **Spring IOC** and **Hibernate** and **Spring JDBC** framework.
- Developing of Backend **API end points** that are responsible for requests and responses for a public API portal on **C# ASP.NET, .Net framework**
- Used Hibernate as **ORM** tool for data persistence and retrieval of data like information of customer.
- Wrote complex **SQL** queries, Stored Procedures using SQL developer & TOAD executed on SQL Server Database.
- Used Maven build tool to automate the process of generating Docker files, building Docker Images, and pushing them to **Docker** Private Registry.
- Developed unit testing framework using **JUnit** test cases for continuous integration testing and used JTest Tool for performance testing.
- Used **JIRA** to assign, track, report and audit the issues in the application.
- Configured and administered Jenkins for **CI/CD** into Tomcat Application Server.
- Used **IntelliJ** as the **IDE** and used standard/ plug-in features for editing, debugging, compiling, formatting, build automation, test case template generation, mutator /accessor code generation and Used GIT for version control.

Environment: Java/J2EE, Spring Boot, Docker, Hibernate 4.x, Microservices, Angular 4, SQL Server, REST, Spring Message, Git, JIRA, Swagger, Visual Studio Code, Junit, Maven, Selenium, Jenkins,JbossWildfly.

Client: DSG, Philadelphia, PA

May 2014 - April 2018

Role: Java/J2EE Developer

Responsibilities:

- Involved in design and development of an entire Module – Guided Set Up.
- Built modules for new services in Java for **APAC** integration projects, to fetch and parse customer orders and save in **MySQL** database and subsequently send back receipts for successful orders placed in real-time.

- Addressed change requirements, 2 Middleware Infrastructure upgrades, **SDDC** migration for enhancing client experience.
- Performed critical enhancements based on customer feedback by upgrading projects to the latest versions (webMethods 9.7).
- Developed the application using **HTML5, CSS3, JavaScript, JSP, Servlets** and JDBC.
- Developed Action classes and Action Forms using the struts framework.
- Client-server validations were handled using Struts Validator Framework's validating plug-in.
- Developed Customs tags to display dynamic contentsto avoid large amounts of java code in JSP
- Connected to database through **JDBC**.
- Experience pulling docker images from **Docker** hub and upload it to AWS ECR, uploading and downloading files from **AWS S3**.
-
- Implemented a centralized logging system using log stash configured as an **ELK stack** (Elastic search, Log stash, and Kibana) to monitor system logs, **VPC** Flow logs, **Cloud Trail** Events, changes in **S3**.
- Used **Jenkins** pipeline to provide API access to a private repo and deploy the artifact to **EC2** instance. Integrated matrix Authorization Strategy plugin with **Jenkins** to specific permissions to **Jenkins** jobs.
- Created **Jenkins** builds and deployed to application server using **udeploy** for **java, and .NET** applications.
- Created Test Automation Framework with Cucumber and configured **Cucumber Report plugin** to Jenkins to generate html reports
- Used SQL server to store the items in the database.
- Used Session beans for navigation of steps.
- Used Entity beans for storing the database into database. Developed Session Beans as the clients of Entity Beans to maintain the Client state.
- Developed Ant Scripts to build and deploy WAR files on to Glassfish Server.
- Extensively used **Netbeans** while writing code as IDE.
- Written complex SQL queries, stored procedures, functions, and triggers.
- Developed test cases and used **JUnit** for Unit Testing.
- Used Git for version controlling.
- Involved in developing new functionality as per the needs of the users.

Environment: J2EE, HTML5, CSS3, JSP, JavaScript, Struts, Servlets, JDBC, MySql Server, Glassfish Application Server, XML (DOM and SAX), CSS, Junit, Windows,AWS.
