Education

Georgia Institute of Technology

Bachelor of Science in Computer Science

Expected May 2026

Atlanta, Georgia

- **Relevant Coursework:** Data Structures and Algorithms, Intro to Artificial Intelligence, Deep Learning, Machine Learning, UI/UX, Object Oriented Programming, Design and Analysis of Algorithms

Experience

Coalition Inc.

Full Stack Engineer Intern

May 2025 – August 2025

San Francisco, CA

- Created and deployed a script to automate DOCX-to-HTML conversion for insurance templates, improving processing efficiency by 50% and reducing formatting errors across 1000+ templates
- Implemented shadow testing infrastructure for a new document generation system, ensuring 100% response parity with the legacy system and accelerating migration timelines
- Designed and built a self-service Streamlit web app to automate a manual insurance audit workflow, enabling non-technical users to generate audit reports independently; reduced manual coordination by 80% and improved file packaging efficiency across underwriting and claims audits

Scale AI

Software Engineer Intern

May 2024 – August 2024

Atlanta, Georgia

- Developed and optimized data processing pipelines for image, video, and multimodal datasets within the GenAI team, increasing data throughput and processing efficiency by 40%
- Assisted in the development and fine-tuning of AI models under the mentorship of senior engineers, leading to the successful deployment of 3 innovative solutions in production
- Conducted performance analysis and optimization of AI models, increasing prediction accuracy by 10% and reducing inference time by 25%

Georgia Tech Research Institute

Software Engineer Intern

Jan 2023 – August 2023

Atlanta, Georgia

- Developed and implemented code to establish Ethernet connectivity within the command box of a B1 Bomber Jet, optimizing network pathways and communication reliability, resulting in a 30% increase in overall system efficiency
- Developed a monitoring and alerting automation system used by over 200 users, enhancing report scheduling and dispatch efficiency by 20% with adjustable halting for maintenance based on user input
- Designed and implemented scalable cloud-based solutions through the full Software Development Life Cycle (SDLC), utilizing Dropbox for seamless file sharing and Slack for team collaboration, resulting in enhanced system performance and reliability for enterprise applications

Experience

Official Sports

Startup

August 2025 – December 2026

Atlanta, Georgia

- Designed and executed structured operational workflows supporting real-time systems during 12,000+ attendee sporting events, sustaining 99%+ execution reliability under peak load windows of 3–5 hours.
- Monitored and managed inventory and transaction data streams of 1,500+ transactions per event across 20+ product SKUs, identifying bottlenecks and implementing process optimizations that reduced processing latency by ~18%.
- Coordinated cross-functional teams of 4–6 members across 3 functional roles using agile-style task prioritization, resolving 90%+ of live operational issues within 15 minutes.

Technical Skills

Languages: Java, Python, C, C++, C#, SQL, JavaScript

Technical Knowledge: React.js, Node.js, HTML, CSS, Tailwind CSS, JUnit/Mockito, REST API, FastAPI, Web Development, Angular, MySQL, PostgreSQL, DynamoDB, App Development, Android SDK, Streamlit, Docker, Git/GitHub, AWS (S3, Lambda, DynamoDB), Object-Oriented Programming, Test-Driven Development, Microservices Architecture, Shadow Testing, Asynchronous Programming, Dependency Injection, Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, Machine Learning, Data Visualization, Agile/Scrum
