

SUMMARY

Results-driven Java Full Stack Developer with 3+ years of experience specializing in backend and frontend development, microservices architecture, cloud solutions, and database management. Strong expertise in Java, Spring Boot, Python, AWS and modern JavaScript frameworks (React.js, Angular). Skilled in AWS and Azure cloud deployments, CI/CD automation, and DevOps practices using Docker/Kubernetes.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, SQL, Kotlin, HTML5, CSS3

Frameworks & Libraries: Spring Boot, Spring Security, React.js, Angular, Node.js, Bootstrap, Hibernate, Kafka

Databases: Oracle, MySQL, MongoDB, PostgreSQL, Redis

Cloud & DevOps: AWS(EC2, EKS, ECS, Lambda, S3, RDS), Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Azure

Testing: JUnit, Mockito, Jest, Selenium

Tools & Methodologies: Maven, Gradle, Git, GitHub, JIRA, Grafana, Agile, Scrum, Test-Driven Development

Others: REST APIs, Microservices, Model-View-Controller, Data Modeling, OAuth, JWT, Distributed Systems

EXPERIENCE

Full Stack Developer, Research Assistant

Feb 2024 – May 2025

University of South Florida, Tampa, FL

- Engineered backend services using Java + Spring Boot to support the research application, designing clean service layers and REST endpoints to power UI workflows and experimentation runs.
- Improved application performance by optimizing backend execution paths and introducing asynchronous/background processing for long-running tasks to keep the UI responsive.
- Established persistent storage using PostgreSQL/MySQL with ORM-based data access and query tuning to track experiment metadata, results, and system logs efficiently.
- Implemented Redis-based caching layer to accelerate repeated reads during experiment iterations, cutting DB calls and improving response latency by 25%.
- Deployed and operated the application on AWS (EC2 + RDS) with production-ready configuration, enabling stable environments for large-scale experimentation.
- Introduced Spring Actuator-based monitoring (health, metrics, runtime indicators) to track system behavior during experiment runs and speed up troubleshooting.

Software Engineer

Jul 2021 – Jun 2023

Srika Projects, Hyderabad, India

- Designed and developed highly scalable web applications with Java and Spring Boot that significantly reduced backend latency by 40% while ensuring long-term system reliability.
- Utilized the Model-View-Controller (MVC) design pattern to implement microservices for user authentication RESTful APIs, accelerating API development by 35% using Spring Boot.
- Configured Spring Security to enforce role-based access control (RBAC), ensuring secure user authentication and authorization across applications.
- Created React.js front-end components and integrated them with backend services to deliver smooth user experiences.
- Leveraged AWS services, including EC2, S3, RDS, and Lambda, to deploy, scale, and manage cloud-based applications, achieving a 40% reduction in infrastructure costs and a 30% improvement in scalability and performance.
- Containerized applications using Docker, streamlining deployment processes and reducing deployment time by 40%, contributing to faster and more efficient releases.
- Integrated Apache Kafka for asynchronous messaging and real-time event streaming, facilitating inter-service communication in the Java-based microservices architecture.
- Enhanced performance of SQL and NoSQL databases, including MySQL and MongoDB, by optimizing queries and schema design to cut retrieval times by 50%.
- Created JUnit test cases using Mockito with a Test-Driven Development (TDD) approach, ensuring robust and error-free functionality for critical features.
- Actively participated in Agile development cycles, contributing to sprint planning, stand-ups, and retrospectives to ensure timely feature releases.
- Automated CI/CD pipelines using GitHub Actions and Jenkins, enabling seamless build, test, and deployment workflows and improving release cycle time by 30%.

Web Development Intern

Jan 2021 – Jun 2021

Exposys Data Labs, Bangalore, India

- Developed reusable, accessible React UI components using JavaScript, applying WCAG best practices to improve usability and maintain consistent design across the app.
- Applied responsive design using Flexbox/Grid and mobile-first breakpoints, ensuring smooth rendering across devices and reducing UI bugs across screen sizes.
- Enhanced site performance by employing lazy loading techniques and DOM optimization, achieving a 30% reduction in page load time and improved browsing experience.
- Added form handling and validation (client-side validation, inline errors, edge-case handling), reducing invalid submissions and improving conversion flow.
- Consumed REST APIs and handled async flows using fetch/Axios, improving data rendering reliability with robust error handling and loading states.

- Modeled SQL and NoSQL database schemas with optimized CRUD operations (indexes + query tuning), increasing data retrieval speed by 25% and improving reliability.
- Collaborated with designers and backend engineers in an Agile workflow, participating in code reviews and translating requirements into production-ready UI.

TECHNICAL CERTIFICATIONS

- AWS Certified Solutions Architect – Associate ([SAA](#)), Database Programming with SQL, **ORACLE ACADEMY** (2021), Data Science and Cloud Solutions Internship, 3CORTEX (2022)

PROJECTS

Task Manager Application: React.js, Spring Boot, Tailwind CSS, MySQL

- Architected a microservices-based task management platform with secure REST APIs, JWT authentication.
- Delivered a responsive UI with React.js, TypeScript, and Tailwind CSS, reducing CSS bundle size by 40%.

Secure Text Transfer Using Diffie-Hellman Key Exchange Based on Cloud: React.js, JavaScript, CSS, AWS, Python, Cryptography

- Built a cloud-hosted file transfer system using the Diffie-Hellman protocol and custom encryption in Python to ensure secure key exchange and data transmission.
- Designed frontend in React.js and deployed on AWS EC2 for low-latency, secure file transfers.

Handwritten Equation Recognition and Solver : Python, CNN, TensorFlow/Keras, OpenCV

- Applied machine learning and probability models for real-time image classification and mathematical parsing.
- Created a CNN-based recognition system with 88% accuracy for character recognition and 85% end-to-end solving accuracy.

EDUCATION

University of South Florida
Master of Science in Computer Science

Tampa, FL
Aug 2023 – May 2025
