

Monali Patel

Senior Full Stack .NET Developer

Charlotte, NC | (704) 710-6540 | monaalip777@gmail.com | **US Citizen**

LinkedIn - [linkedin.com/in/monali-patel-149753311](https://www.linkedin.com/in/monali-patel-149753311)

Professional Summary

- Over **10 years** of hands-on experience in **full-stack .NET development**, from initial requirements gathering to deployment and maintenance, across banking, IoT, insurance, hospitality, and healthcare industries.
- Strong background in building and modernizing enterprise applications using .NET Framework, **.NET Core, ASP.NET MVC, Web API**, and modern frontend frameworks like **Angular and React**.
- Proven ability to lead development efforts in Agile and Scrum environments, collaborating closely with business teams to translate requirements into scalable technical solutions.
- Experienced in cloud migration and hybrid deployments using **AWS** and **Azure**, including serverless architectures, containerization with **Docker** and **Kubernetes**, and **CI/CD** pipeline automation.
- Skilled in database design, optimization, and reporting using **SQL Server, Oracle**, and **NoSQL** solutions, with extensive work in **SSIS, SSRS**, and **ETL** processes.
- Committed to code quality, maintainability, and performance, with practical experience in TDD, code reviews, and mentoring junior developers.

Technical Skills

- **Languages & Frameworks:** C#, VB.NET, .NET Core 3.1/5.0/6.0, .NET Framework 4.0-4.8, ASP.NET MVC 3-5, ASP.NET Web API, Entity Framework 6/EF Core, LINQ, JavaScript/TypeScript, Python, Java, HTML5, CSS3, Sass/LESS, XAML, Razor
- **Frontend Technologies:** Angular 7-15, React 16-18, React Native, Redux, RxJS, Angular Material, Bootstrap 3-5, jQuery, AJAX, Kendo UI, Telerik, Webix, Knockout.js, Ember.js
- **Cloud & DevOps:** Microsoft Azure (App Services, Functions, Cosmos DB, IoT Hub, SQL Azure), AWS (EC2, S3, Lambda, RDS, DynamoDB, Beanstalk, CloudFormation), Docker, Kubernetes, Jenkins, Azure DevOps, Git, TFS, SVN, Maven, Ansible, Terraform
- **Databases:** SQL Server 2008-2019, Azure SQL, Oracle 11g-13c, PostgreSQL, MySQL, DynamoDB, MongoDB, Cosmos DB
- **Middleware & Services:** WCF, WPF, WinForms, Web Services (SOAP/REST), GraphQL, MQTT, RabbitMQ, Kafka, Service Bus, IIS 5-10
- **Tools & Methodologies:** Visual Studio 2010-2022, SSMS, SSIS, SSRS, SSAS, DTS, TDD, BDD, Agile/Scrum, Waterfall, JIRA, Rally, Postman, Swagger, NUnit, xUnit, Moq

PROFESSIONAL EXPERIENCE

Wells Fargo – Charlotte, NC

Senior Full Stack .NET Developer | Aug 2025 – Present

Project: Monitoring and Administration Tool (MAT) – Angular-Centric Enterprise Dashboard

Description: Large-scale internal monitoring and administration platform used by Wells Fargo's engineering and

operations teams to track system health, application performance, log analytics, and infrastructure metrics in real-time. The tool supports centralized alerting, administrative management, and compliance reporting across distributed microservices and cloud environments.

- Led frontend development using **Angular 13+** with **TypeScript**, **Angular Material**, and **RxJS** to build dynamic, modular dashboards with real-time data visualization and interactive admin panels.
- Developed **.NET Core 6.0 Web APIs** with **Entity Framework Core** to serve structured JSON data to Angular services, implementing **JWT authentication** and role-based access control.
- Designed and deployed **Azure-based microservices** using **Azure App Services**, **Azure Functions**, and **Azure Service Bus** for event-driven communication, achieving **99.9% uptime**.
- Containerized application components with **Docker** and orchestrated using **Azure Kubernetes Service (AKS)**, enabling scalable deployment and automated rolling updates.
- Managed end-to-end development of the Monitoring and Administration Tool (MAT), applying foundational web development skills in **ASP.NET**, **HTML5**, **JavaScript**, and **jQuery** to build responsive, accessible user interfaces, while utilizing WebAPI for seamless frontend-backend communication and **MVVM** patterns for clean UI architecture.
- Built **Azure DevOps CI/CD pipelines** with YAML configurations, automating builds, tests, and deployments across **DEV**, **UAT**, and **PROD** environments, reducing release cycles by **40%**.
- Integrated **Azure Monitor** and **Application Insights** for live telemetry, log aggregation, and performance analytics, enabling proactive incident response.
- Implemented **Azure SQL** with optimized stored procedures and used **Azure Cosmos DB** for NoSQL-based log and metric storage.
- Collaborated in **Agile/Scrum** ceremonies, managed backlog in **Azure Boards**, and conducted **code reviews** using **Azure Repos**.

Environment: Angular 13+, .NET Core 6.0, Azure (App Services, Functions, AKS, SQL, Cosmos DB, DevOps), Docker, Entity Framework Core, JWT, TypeScript, RxJS, Agile/Scrum

Vertiv – Westerville, OH

Senior Software Engineer | February 2025 – June 2025

Project: IoT Real-Time Monitoring Platform – React-Based Dashboard

This project involved developing a real-time monitoring system for industrial IoT devices using MQTT-based telemetry. The platform included a React dashboard for live data visualization, alerting, and remote device management, supporting thousands of connected sensors and equipment units across multiple manufacturing sites.

- Developed a responsive **React 18** frontend using **Redux** for state management and **Material-UI** for a consistent, modern design system. Integrated **WebSocket** connections to stream live MQTT data directly into the UI, enabling sub-second dashboard updates and interactive device control panels.
- Built backend services in **ASP.NET Core 3.1** using the **MQTTnet** library to handle high-volume publish/subscribe messaging, reliably processing over **10,000 messages per second** from industrial sensors and edge gateways.
- Secured all API endpoints and MQTT broker connections using **JWT-based authentication** and **TLS/SSL encryption**, implementing role-based access controls to restrict device commands and data visibility according to user permissions.
- Conducted **unit testing** of .NET Core services using **xUnit**, focusing on message validation, authentication logic, and data transformation functions to ensure reliability under high load.
- Performed **integration testing** using **Postman** and custom scripts to validate end-to-end data flow from IoT devices through MQTT brokers to the React dashboard, ensuring data consistency and latency targets were met.

- Implemented **React component testing** using **Jest** and **React Testing Library**, validating UI behavior, state updates, and WebSocket integration under simulated real-time data scenarios.
- Hosted the React frontend using **AWS S3** and **CloudFront** for global CDN distribution, ensuring low-latency access to monitoring dashboards for geographically dispersed operational teams.
- Deployed backend services to **AWS ECS (Elastic Container Service)** using **Docker** containers, enabling auto-scaling and reliable handling of fluctuating telemetry loads during peak production periods.
- Implemented **AWS Lambda functions** for serverless data transformation and alert processing, reducing infrastructure overhead while maintaining real-time responsiveness for critical notifications.
- Utilized **AWS IoT Core** for secure device registration, certificate management, and bidirectional command routing, integrating with **AWS Kinesis Data Streams** for high-throughput telemetry ingestion and analytics.
- Monitored system performance and operational health using **Amazon CloudWatch** and **AWS X-Ray**, creating custom dashboards to track message throughput, error rates, device connectivity status, and API latency.
- Established **performance and load testing** using **Apache JMeter** to simulate thousands of concurrent MQTT connections and dashboard sessions, identifying and optimizing bottlenecks in data processing pipelines.
- Automated infrastructure provisioning using **AWS CloudFormation** templates, ensuring consistent, repeatable deployment of all AWS resources across development, staging, and production environments.
- Implemented **CI/CD pipelines using AWS CodePipeline and Code Build**, automating Docker image builds, security scanning, testing suites, and deployment to ECS with integrated approval gates and rollback capabilities.

Environment: React 18, Redux, Material-UI, ASP.NET Core 3.1, MQTT, AWS (IoT Core, Lambda, ECS, S3, CloudFront, Kinesis, CloudWatch, X-Ray, CloudFormation, CodePipeline), Docker, JWT, TLS/SSL, WebSocket, xUnit, Jest, Postman, JMeter

BB&T (Now Truist) – Charlotte, NC

.NET Developer | June 2023 – Jan 2025

Project 1: Pay My Premium (PMP) – Angular Finance Portal

Description: Customer-facing premium finance management portal allowing users to view payment history, schedule payments, download invoices, and manage loan accounts online.

- Developed **Angular 12+** frontend with **Bootstrap 5**, **SASS**, and **Angular Forms** for responsive, accessible user interfaces.
- Built **.NET Core 5.0 Web API** with **Entity Framework Core** and **SQL Server**, implementing **OAuth 2.0** via **Azure AD B2C** for customer identity management.
- Hosted frontend on **Azure App Service** and backend on **Azure Linux Web Apps**, with **Azure CDN** for static asset delivery.
- Used **Azure Key Vault** for secrets management and **Azure SQL Database** with geo-replication for high availability.
- Implemented **Azure Service Bus** for asynchronous payment processing and notification workflows.

Project 2: One AFco – React-Based Admin Dashboard

Description: Internal administration dashboard for premium finance servicing, offering loan management, reporting, and compliance tracking for business clients.

- Created **React 17** admin interface with **React Router**, **Axios**, and **Prime React** component library for data grids, charts, and forms.
- Developed **.NET Core 6.0** microservices with **Dapper** for high-performance data access and deployed as **Docker containers** on **Azure Container Instances**.
- Integrated **Azure API Management** for API governance and **Azure Application Gateway** for load balancing and WAF.
- Implemented **Azure Blob Storage** for document uploads and **Azure Cosmos DB** for NoSQL-based activity logs.

- Automated deployments using **Azure DevOps Pipelines** with **Docker Compose** and **Kubernetes manifests**.

Environment: Angular 12+, React 17, .NET Core 5.0/6.0, Azure (App Service, SQL, Key Vault, Service Bus, Cosmos DB, Container Instances), Docker, Entity Framework Core, Dapper, Azure DevOps

eSource Technology – Pittsburgh, PA

.NET Developer / Frontend Developer | Jan 2022 – May 2023

Project: Pittsburgh City Guide – Angular Tourism & Information Portal

Description: Comprehensive city guide web application for residents, tourists, and students, featuring university listings, restaurant guides, activity planners, and event calendars.

- Built **Angular 13** frontend with **Angular Universal** for SSR, **NgRx** for state management, and **Angular Flex Layout** for responsive design.
- Developed **.NET Core 5.0 Web API** with **Entity Framework Core** and **SQL Server**, using **Azure App Service** for hosting and **Azure Redis Cache** for session storage.
- Integrated **Azure Maps** for location services and **Azure Cognitive Search** for fast, intelligent content discovery.
- Implemented **Azure Active Directory B2C** for user authentication and **Azure Front Door** for global CDN and security.
- Used **Azure Pipelines** for CI/CD and **Azure Monitor** for application performance tracking.
- Containerized backend services with **Docker** and deployed to **Azure Kubernetes Service (AKS)**.

Environment: Angular 13, NgRx, .NET Core 5.0, Azure (App Service, Redis, Maps, AKS, AD B2C), Docker, Entity Framework Core, SQL Server

Crown Plaza – Pittsburgh, PA

.NET Developer | Nov 2020 – Dec 2021

Project 1: CP Pittsburgh West – Hotel Booking Portal (Angular + .NET)

Description: Full-service hotel reservation and management website with online booking, wedding/meeting scheduling, customer reviews, and payment processing.

- Developed **Angular 9/10** frontend with **Bootstrap 4**, **Chart.js**, and **Stripe.js** for payment integration.
- Built **ASP.NET Core 3.1** backend with **Entity Framework Core** and **Azure SQL Database**, hosted on **Azure App Service**.
- Implemented **Azure Functions** for email notifications and **Azure Logic Apps** for reservation workflow automation.
- Used **Azure Blob Storage** for hotel image galleries and **Azure CDN** for global content delivery.
- Deployed using **Azure DevOps** with multi-stage YAML pipelines.

Project 2: Avedence DAM – Digital Asset Management (React + Azure)

Description: Enterprise digital asset management system for media storage, FOIA request collaboration, and workflow automation.

- Built **React 16** admin interface with **Redux**, **Ant Design**, and **Microsoft Graph API** integration for Office 365 collaboration.
- Developed **.NET Core 3.1** microservices deployed as **Docker containers** on **Azure Kubernetes Service (AKS)**.
- Used **Azure Media Services** for video transcoding and **Azure Cognitive Services** for image tagging and OCR.
- Stored assets in **Azure Blob Storage** with **Azure CDN** and metadata in **Azure Cosmos DB**.
- Implemented **Azure AD** for enterprise authentication and **Azure Key Vault** for encryption keys.

Environment: Angular 9/10, React 16, .NET Core 3.1, Azure (App Service, AKS, Functions, SQL, Cosmos DB, Blob Storage, AD), Docker, Entity Framework Core

Veradigm – Chicago, IL

.NET Developer | Jan 2018 – October 2020

Project: Healthcare Data Platform – Full Modernization & AWS Cloud Migration

This initiative focused on modernizing a legacy healthcare data management system, migrating from outdated [ASP.NET](#) Web Forms to a modern Angular frontend and transitioning the entire backend and infrastructure from on-premises servers to AWS cloud services.

- Led the migration of a legacy [ASP.NET](#) Web Forms application to a modern **Angular 7/8** frontend using **TypeScript** and **RxJS**, improving UI responsiveness by 60% and enabling a more maintainable, component-based architecture.
- Rebuilt the backend using **.NET Core 2.1 Web API**, designing RESTful services to support the new Angular frontend and enable secure, scalable data access for healthcare providers and administrators.
- Orchestrated the migration of the application from on-premises servers to **AWS**, deploying backend services to **AWS Elastic Beanstalk** for simplified management and auto-scaling capabilities.
- Transitioned the database to **Amazon RDS for SQL Server**, leveraging managed instances for high availability, automated backups, and enhanced security compliance required for healthcare data.
- Designed and implemented a **microservices architecture** using **AWS ECS (Elastic Container Service)** and **Docker**, replacing a monolithic structure with independently scalable services for patient data, billing, and reporting modules.
- Established an **event-driven architecture** using **Amazon Event Bridge** and **Amazon SNS/SQS** to handle real-time data updates, notifications, and workflow automation across the platform.
- Built **ETL pipelines** using **AWS Glue** to process and transform incoming healthcare data from various sources, ensuring data integrity and compliance with HIPAA regulations.
- Enabled **big data processing and analytics** by integrating **Amazon Redshift**, allowing stakeholders to run complex queries and generate insights from large historical datasets.
- Implemented **Amazon CloudWatch** for comprehensive monitoring, logging, and alerting, setting up custom dashboards to track application performance, error rates, and user activity.
- Automated the deployment process using **AWS CodePipeline** and **AWS Code Build**, creating CI/CD pipelines that included automated testing, security scanning, and blue-green deployment strategies to reduce downtime and deployment risk.

Environment: Angular 7/8, TypeScript, RxJS, .NET Core 2.1, AWS (Elastic Beanstalk, RDS, ECS, Event Bridge, SNS, SQS, Glue, Redshift, CloudWatch, CodePipeline), Docker, REST API, CI/CD

Sagarsoft (India) Limited | Hyderabad, India

.NET Full Stack Developer | Jan 2015 – Dec 2017

Project: Cloud-Based Pharmacy Inventory Modernization System

As part of Sagar soft's Digital Transformation practice, developed and migrated a legacy inventory system to a modern cloud-based architecture for a healthcare/retail client, enabling real-time stock tracking, operational visibility, and scalable access.

- **Digital Transformation Initiative:** Architected and implemented a **dual-platform modernization strategy**, transitioning the client from a siloed desktop system to a unified WPF desktop + ASP.NET web ecosystem, improving data accessibility and business agility.

- **Application Modernization (Desktop):** Engineered a **modular WPF desktop application** using MVVM pattern with Prism for maintainable UI composition and Telerik controls for enhanced user productivity, aligning with Sagarsoft's focus on **legacy application revitalization**.
- Orchestrated the complete modernization and cloud migration of a pharmacy inventory system, overseeing the full project lifecycle from requirements gathering to deployment. Leveraged core development skills in **ASP.NET MVC, JavaScript, jQuery**, and **SQL Server** to redesign and enhance the application, while implementing **MVVM** in **WPF** for desktop modules and managing project timelines, team coordination, and stakeholder communication to ensure on-time delivery.
- **Cloud-First Web Portal:** Developed a **responsive ASP.NET MVC 5 web portal** using jQuery, Bootstrap 3, and Kendo UI to provide real-time dashboards, reporting, and remote inventory management—key to supporting the client's **retail and healthcare operations**.
- **Backend & Data Layer Optimization:** Designed and maintained **scalable business logic and data layers** using C#, Entity Framework 6, and SQL Server, ensuring high performance and data integrity for critical inventory operations.
- **End-to-End Cloud Migration & DevOps:** Led the **Azure cloud migration initiative**, a core offering of Sagarsoft's Cloud practice:
- **Modernized hosting** by deploying the web portal to **Azure App Service** with **Azure SQL Database** for elastic scalability.
- **Extended legacy support** by hosting the WPF application on **Azure Virtual Machines**, ensuring business continuity.
- **Enhanced security posture** through **Azure Active Directory** integration for centralized, role-based authentication.
- **Implemented operational intelligence** using **Azure Log Analytics** for monitoring, auditing, and actionable insights.
- **Established resilience** by configuring **Azure Backup** for disaster recovery and compliance.

Outcome: Successfully delivered a **scalable, secure, and highly available inventory management system** that modernized the client's operations, improved cross-platform accessibility, and strengthened system resilience—**directly supporting Sagarsoft's mission of delivering ROI through technology modernization** in the healthcare and retail sectors.

Technology Stack: C#, ASP.NET MVC 5, WPF, Entity Framework 6, SQL Server, Microsoft Azure (App Service, SQL Database, Virtual Machines, Active Directory, Log Analytics, Backup), jQuery, Bootstrap 3, Kendo UI, Telerik, Prism, MVVM

EDUCATION

Bachelor of Computer Application

Sardar Patel University, India

CERTIFICATIONS

- AWS Certified Developer – Associate
- Certified .NET Developer (Brain Bench Transcript ID: 13737800)
