

Summary

- Results-driven Software Engineer with 7+ years of experience building secure, scalable, and AI-integrated applications. Proficient in modern full-stack technologies including JavaScript (React, Next.js, Node.js), Python, and cloud platforms (Azure, GCP). Deep expertise in microservices, containerization (Docker, Kubernetes), Infrastructure as Code (Terraform), and CI/CD pipelines. Passionate about integrating AI development tools (GitHub Copilot, Cursor) to accelerate product delivery.

Skills

- Languages:** JavaScript, Python, TypeScript, SQL, Bash, Go, C#
- Frontend:** React, Next.js, Angular, Redux, HTML5, CSS3, Tailwind, Bootstrap
- Backend:** Node.js, FastAPI, Django, Flask, .NET Core, ASP.NET MVC, REST, GraphQL, gRPC
- Databases:** SQL Server, PostgreSQL, MongoDB, Redis
- DevOps & Cloud:** Azure, GCP, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Azure DevOps
- AI Tools:** GitHub Copilot, OpenAI API, Cursor, LangChain
- Testing:** XUnit, Jest, PyTest, Mocha, Postman, Cypress, Selenium
- Tools:** Git, Jira, GitHub, Bitbucket, VS Code, Prometheus, OpenTelemetry
- Methodologies:** Agile (Scrum/Kanban), CI/CD, TDD, Microservices, SOLID, Clean Architecture

Education

- Master of Science in Computer Science, Wayne State University, Detroit, MI, May 2024
- Bachelor in Computer Science, Gujarat Technical University, Gujarat, India, Jun 2014

Work Experience

PNC Financial Services

Feb 2024 – Current

Software Development Engineer

- Applied SOLID design principles by implementing the repository design pattern to enforce separation of concern in the data access layer, leveraging EF Core to enhance code maintainability and achieve 95% test coverage with XUnit.
- Designed secure APIs integrated with Azure Kubernetes Service (AKS), with infrastructure automated via Terraform, ensuring high availability and compliance with industry standards.
- Spearheaded performance optimization for CRM portal using React and Redis-based caching, reducing page load times by 40% and increasing user engagement.
- Led integration of Elasticsearch for advanced multi-criteria search across customer portfolios, enabling faster and more accurate data retrieval for Relationship Managers.
- Implemented JWT-based authentication with RBAC to ensure secure access control across services, in collaboration with InfoSec teams.
- Introduced GitHub Copilot and Cursor into development workflows, accelerating feature delivery and reducing bugs by catching issues earlier in the coding phase.

Endurance Technologies, India

Jan 2019 – Mar 2022

Software Engineer

- Applied Designed and deployed microservices architecture for supplier and inventory management systems using ASP.NET Core, RabbitMQ, and SQL Server to improve scalability and data consistency across plants.
- Engineered end-to-end procurement workflows with asynchronous processing and audit logging, enhancing traceability and error recovery in supply chain processes.
- Developed dynamic supplier dashboards using Angular and Bootstrap, integrating REST APIs for real-time updates on orders, delivery, and stock levels.
- Optimized stored procedures and database indexes to reduce report generation time by 30% and improve responsiveness of analytics dashboards.
- Implemented CI/CD pipelines using Jenkins and Azure DevOps to enable automated builds, testing, and deployments across staging and production environments.
- Mentored junior developers in backend logic optimization and helped establish coding standards and review practices within the team efficiency.

Hexaware Technologies, India

Jul 2015 – Dec 2018

Software Developer

- Participated in the modernization of enterprise ERP modules for a major manufacturing client, migrating legacy VB.NET applications to ASP.NET MVC and AngularJS.
- Designed and maintained PostgreSQL queries, stored procedures, and triggers to support core functionalities including HR, procurement, and payroll systems.
- Collaborated with QA and project management teams to ensure timely sprint deliveries while maintaining unit test coverage above 85%.
- Implemented a centralized logging and exception handling framework for backend services, improving system stability and easing debugging for support teams.
- Supported migration to Agile methodologies by aligning feature development with sprint planning, backlog grooming, and retrospective sessions.
